Mr. COCKLEY. That isn't a fair statement of his testimony. He said if he had a market value on a sufficient number of shares to show a real market, then he applied that market price to the whole. I don't want the record confused on that.

By Mr. SPRINGER:

Q. In your opinion, a sufficient amount of a given class of securities is what, 50 percent or more?

A. Well, what I did was not look at the given individual security, for instance such as a preferred stock or a bond
5684 or serial note; what I did was to take the total indicated market value of all the capitalization, and if I had 70 percent or better of that accounted for with quotations, I thought it was a very reliable indication of the investors' appraisal.

Q. Was your minimum 70 percent?

A. No; I had no minimum, because in each of these cases it runs higher than that, in every case. In other words, if the great bulk of the securities, and in most cases that relates to the common stock, had quotations to be reliable, you account for the great bulk of the total indicated market value in each one of these, so I thought it was a very reliable guide. As a matter of fact, I don't know of any other guide that could be used.

Q. When you speak of quotations, you are excluding the estimates that you made of the other type of securities not held by the public or institutional investors?

A. Let me make my point clear by a case we have already talked about. Take Pacific Lighting for example. Pacific Lighting had a total indicated market value in 1940 of $166,000,000, approximately. The only figure included in that entire total, based upon an estimate, is for the bank loans in the amount
5685 of $6,000,000, and I took those at par. So it is $6,000,000 estimated against $166,000,000 total, and that was my comparison all the way through.

Q. Now, can you make a similar comparison for El Paso Natural Gas where you had quotations only on about $7,000,000 out of $18,000,000 total outstanding securities?

A. No; I don't admit that, that statement is incorrect. The common stock outstanding was 601,594 shares, and there were market quotations on that which ranged from 41⅞ to 26, and I took an average of 33.94 as the average price for the year per share. That amount gave an indicated market value for the total common stock issued and outstanding of $20,400,000 as a beginning figure.

Then there were some 7 percent preferred in the amount of 14,797 shares outstanding, which gave another $1,570,000.

So that is about $22,000,000 accounted for out of a total indicated $33,000,000 of capital.

Now, the approximate $11,000,000 that I had estimates on were on those serial notes which couldn't possibly be worth more than par, so I accepted them at par; and the first mortgage bonds, which I also took at par. So that certainly if I made an error at all it was on the conservative side.

Q. So, on your formula where you have an estimate for $11,000,000 of bonds and notes, and the quotations you had on the preferred and common stock for that company, it gave you
5686 what you considered a larger portion of the indicated market value of capital with quotations than without; so you included it in your study on the same formula that you have the other companies?

5687 A. With one further qualification, that it is my conviction and contention that on the serial notes, which were taken at par, in a company like El Paso there can't be any possible question about those notes at par. So that although it is an estimated figure, it is as reliable as any market quotation you can get. The only thing is that when a person takes a note, they don't buy and sell it, usually; they hold it.

Q. Now you were stating the exceptions where you didn't have market quotations, and you had finished Oklahoma Natural Gas Company, had you not?

Mr. COCKLEY. He had finished all of them.

The WITNESS. I think I had come down to the last, which was Southern Natural.

TRIAL EXAMINER. You got down that far, anyway.

The WITNESS. Well, I think I was just up to Southern Natural.

In the case of Southern Natural—yes; I gave that, I have covered that, also.

Mr. COCKLEY. How much of that did you have to estimate out of a total appraisal of $31,000,000?

The WITNESS. Of a total indicated market value of $31,000,000, it was all accounted for except $1,000,000. There was $1,000,000 that I estimated, and $30,000,000 that was actually based
5688 upon quotations, and those estimates were again on the first pipe line 4½'s of 1952, and there I took the call of 105½; and on the collateral notes due serially from 1941 to 1942 of $600,000, I took those at par.

By Mr. SPRINGER:

Q. Will you state for clarification purposes your formula for securing indicated market value of capital, Mr. Coffman?

A. My procedure was to take, in each of these companies, the average of the various securities and long-term bank loans that were outstanding in 1940, including all of the common stock, the preferred stock, the various mortgage bonds, the various debentures and other bonds, any notes, and the bank loans.

In each case where I could find that there was a market quotation on the greater portion of the total outstanding capital structure, I used market quotations wherever they were available on each of the securities mentioned. Where there were no quotations, based upon my experience and knowledge of such securities I made an estimate, which in each case was par or greater for the security.

With respect to those securities, which for the most part were bank loans, and a few bonds, where I did make an estimate, they were accounting for a very small fraction of the total indicated market value except in the case of El Paso, where there was a larger percent.

5689 Q. And did I understand you to say that where a class of security was held partially by the public and partially by institutional investors, and the remainder by affiliates, that you took a market quotation and then an estimate for the remainder, to get a figure on the total of that outstanding class of securities?

A. No; I would like to make my point clear on that question.

TRIAL EXAMINER. You only required one quotation for the whole class of stock?

The WITNESS. Yes, sir; if there were enough shares or bonds traded so I had an indication of what the investors that were trading in this thing said it was worth, then it made no difference whether an insurance company or a bank had some of these securities and continued to hold them year in and year out.

By Mr. SPRINGER:

Q. Or an affiliate?

A. In the case of an affiliate, it made no difference, because if there were enough of the shares outstanding, not held by affiliates, to give me a quotation, then I said that that market quotation, times the total amount of that particular security issued and outstanding, gave me the indicated investors' appraisal.

Q. Now for the Southern Natural Gas Company, first
5690 mortgage sinking fund 4½ percent, due 1952, there was no market quotation, was there?

A. No; sir; that was $528,000, and I took that at the estimated figure of 105½, which is what that type of bond, which had a market quotation, was selling on a yield basis in the market at the time.

Q. Now for $2,907,000 of the approximately $6,000,000 of adjustment mortgage 6 percent, due 1960, held by affiliates, you had no market quotation on that, of course?

A. The adjustment mortgage 6's due in 1960—there was a market quotation, because they were not all held by affiliates. There was a market quotation of 102½ as a high; and 90 as a low, and the average was 96¼.

Q. Of course, there were $3,000,000 held by affiliates, and you translated your market quotation for the total sum of $5,771,000 of those adjustment mortgage 6's, due in 1960?

A. If I can say it again, if, let us say, the Chase National Bank holds some of these bonds, and they continue to hold them in their portfolio, and never trade, but I, and a group of other individuals, hold some of those securities and trade in them day in and day out, then I assume that Chase National Bank, if they wanted to sell theirs, would have to consider the same kind of quotation, if they came into the market, that I do going in day in and day out.

Q. And the total included $3,000,000 held by the
5691 affiliates?

A. Exactly.

TRIAL EXAMINER. You can't get a quotation on securities that aren't sold?

The WITNESS. No; but as long as there are securities traded, that is the only guide I have got to go on to know what you, as a holder who doesn't trade, will have to consider if you do want to trade.

By Mr. SPRINGER:

Q. For this particular period of time?

A. Yes.

Q. Now there were $600,000 of 4 percent notes, 1939–1942, held by institutional investors, and there was no market quotation on that so you made an estimate, I take it?

A. I took those at par; yes. That accounted for $600,000 out of $31,000,000.

Q. Now for the common stock of Southern Natural, approximately half of it was held by the public, and then slightly more than half held by affiliates. So you took the market quotation and applied it to the total $10,000 worth of common stock, did you not?

A. I took the quotation that was available on the shares traded, and applied it against the total amount of issued and outstanding capital, that is right.

Q. Now do you know what Moody's ratings are on the 5392 bonds that you included in your natural gas company list for your study here in Exhibit 27–A?

A. Well, I don't happen to know what Moody's are. I know what ours are.

Q. Do you mean that there is a wide variation in the trade between your ratings and Moody's?

A. Not a wide variation but from time to time there is. The chief difference, however, is that we use one kind of symbol and they use another. We talk in terms of A–1 plus, and they talk in terms of Aaa.

Q. Could you make a general statement that is comparable to this statement, that a majority of the natural gas companies that you have selected for your study, have bonds rated by Moody at A or lower?

Mr. COCKLEY. I object to that. I don't think a general statement of that kind means anything. Bond ratings are individual matters, obviously, and it just doesn't mean anything.

Mr. SPRINGER. Of course, it is a preliminary step before the meaning is revealed. It will dawn on you pretty soon.

TRIAL EXAMINER. The objection is overruled.

The WITNESS. Well, I will answer your statement this way, that so far as Standard and Poor's ratings are concerned, that many of these companies have bonds outstanding, and those bonds are rated A or in the B classification.

5393 By Mr. SPRINGER:

Q. Now the electric companies which you have selected for your study, the bonds which are outstanding for most of those

companies are Aa and Aaa bonds, are they not, on Moody's rating? What are they on yours?

Mr. COCKLEY. Let's have one question at a time, please.

The WITNESS. In the case of the Boston Edison, which was included, they had $53,000,000 of bonds outstanding, first mortgage series A, 3½'s, due 1965. Those were A-1 plus.

By Mr. SPRINGER:

Q. Is that the highest rating you give?

A. That is the highest rating we give.

Q. Is that true of all the rest of the electric companies you have listed in your study?

A. Well, they vary, they are not all in the A-1 plus class by quite a margin.

TRIAL EXAMINER. Are these Standard ratings?

The WITNESS. These are Standard and Poor's corporation ratings—that is my firm. I have already qualified or made the answer that on Moody's ratings I don't have them with me, and I don't know. So if you want to know about ratings, you will have to take my ratings.

By Mr. SPRINGER:

Q. Could we have this agreement, that the Aaa Moody 5694 rating is the same as your A-1 plus?

A. Generally so, we are not far apart.

Mr. COCKLEY. I submit that the witness ought not to be compelled to use a competitor's ratings.

TRIAL EXAMINER. I think he should be familiar with them.

The WITNESS. I am familiar with them on the basis that I know that our ratings don't vary greatly from theirs, but the symbols are different.

By Mr. SPRINGER:

Q. Is this a fair statement, that the electric companies which you have selected for your study, which have bonds outstanding, that those bonds have a much higher rating, either by your organization or Moody's, than the bonds of the natural gas companies which you have selected for your study?

Mr. COCKLEY. Well, I object to the question in that it applies to a particular selection of companies, and the witness has carefully explained from the beginning that he used all of the companies on which he had available data, and he made no selection, and I don't like to have that included in there. If he wants to say the companies that appear in here, it seems to me perfectly

proper, but if there is any emphasis placed on "which you selected," with the inference that he has picked companies——

Mr. SPRINGER (interposing). We have already developed the basis of his selection. Now he has 13 natural gas companies
5695 in his study, and 7 electric companies in his study, and he makes a comparison. I am just asking him to compare the bond ratings of that group by electric and gas.

Mr. COCKLEY. I have no objection to that.

The WITNESS. Generally speaking, the bond ratings on the electric operating utilities as a class would be higher than bond ratings in the natural gas industry, but obviously that indicates the difference between the two types of investors' appraisal. In one case you can actually sell an A–1 bond and get by with it, and in the other case you can't, or they would if they could.

By Mr. SPRINGER:

Q. Is it a fair statement that natural gas bonds are relatively short-lived bonds, say around 15 years?

A. Well, generally in the natural gas industry that tends to be true, because there you have a wasting asset, and obviously you couldn't issue a bond for a longer life than you thought the asset was going to last.

Q. Is it generally true that the electric bonds are issued for 25 or 30 years?

A. Usually many of the electric bonds are longer term maturities, but there again, there is a difference in the industry. In one case it is a wasting industry, and in the other it isn't.

5696 Q. On page 6 of your Exhibit 27–A you show in the last line a figure excluding Pacific Lighting Corporation. What was the purpose of excluding Pacific Lighting Corporation?

A. Well, as I pointed out in my first original exhibit, the Pacific Lighting Corporation was an unduly large company. From the standpoint of size and no other, it was not in line with any of the other companies——

Q. (Interposing.) Is size important?

* * *

The WITNESS. Well, I will answer your question of size in a minute. The nature of the territory that was served, the type of service rendered, and so on, were important, but the main thing was that in taking any group of companies for a comparison, where one item stands out so heavily in the total that it unduly weights the average, from a statistical standpoint, as I think we all know, it is unsound. So I showed it both ways, I showed

it with the inclusion and with the exclusion. Size generally has a bearing on the extent to which one would consider it. Otherwise, it is just one of the factors I look at; I don't give it any more weight than anything else, particularly.

* * *

5697 The WITNESS. Further, I don't think I can make any better direct answer than what I originally stated on page 16 of the original exhibit, wherein I made this comment also, I think, to the same kind of question. I say here:

"Included in the above group of natural gas companies is Pacific Lighting Corporation. This company, through subsidiaries, distributes natural gas to 272 cities and towns in Southern California, including Los Angeles. Its subsidiaries serve about half the population of the State. Market prices of the securities of these operating companies are not available. In the absence of these, this holding company was treated as a single operating company in the above group. As a result, its indicated market value is nearly 40 percent of that of the entire group of natural gas companies.

"This gives entirely too much weight in the above table to a purely distributing company. Pacific Lighting Corporation owns no gas-producing facilities. It does not run any of the risks of a producing and transporting company, as does the Hope Natural Gas Company. It purchases its gas from independent oil and gas producers operating in the immediate territory
5698 served by it, where the actual and potential reserves are the greatest in its history.

"For these reasons, the risks of capital employed in this company more nearly approximate those of strictly distributing companies serving manufactured or mixed gas. Comparison of the investors' evaluation of the risks of this company as compared with the risks in the manufactured and mixed gas companies set forth above is as follows." Then I went on to show the Pacific Lighting Corporation separately and then the manufactured and mixed companies as a group.

5699 Q. Did you know that Pacific Lighting Corporation's system was an integrated system of approximately three to four hundred miles extending from the center of California down to the southern portion of California?

A. I know it serves that general area.

Q. Do you know that it has 1,600 miles of main transmission line?

A. I know it has transmission lines, but it still has to buy all of its oil.

Q. Do you know whether it has 1,600 miles of transmission line?

A. If you want to get the exact figure, I will check it. [After a pause.] It has properties including 240 miles of field gathering lines, 1,600 miles of transmission line, 11,400 miles of distribution line, and 24 miles of leased line.

Q. Do you know that one of the companies in that group, the Industrial Fuel Supply Companay, purchases, compresses, and transports gas for its affiliates in that integrated system?

A. Well, according to my figures here, the Industrial Fuel Supply Companay operates as a nonutility company and provides gas either for compression, transmission, or sale of natural gas under special contract, and is not engaged in the
5700 business of supplying gas to the public.

Q. Could you get the complete information and check me on whether or not the Industrial Fuel Supply Company purchases, compresses, and transports gas for its affiliated companies in that integrated system, in addition to these special contracts that you mentioned?

A. I think I can find that out.

Mr. COCKLEY. I certainly object to asking the witness to go out and make an investigation and come back here and testify.

Mr. STRINGER. I just asked him to check me. I would be willing to show him the source of this at recess.

* * *

By Mr. STRINGER:

Q. Do you know that the integrated system of Pacific Lighting has 18 field compressor stations with a capacity of 50,000 horsepower?

A. Yes; I know that.

Q. Do you know they have 21 booster stations with a
5701 horsepower of 19,000?

A. Yes; I know that.

Q. Do you know that they have 37 low-pressure and 79 high-pressure gas storage holders with a total capacity of 120,000,000 cubic feet?

A. Approximately 120,000,000; yes, I know that.

Q. Do you kno wwhen the Pacific Lighting System was converted to all-natural gas?

* * *

A. I have it here. It was 1927.

Mr. COCKLEY. That is it was converted from manufactured gas to natural gas?

The WITNESS (reading). "Natural gas first introduced in the Los Angeles metropolitan area in 1913 was served by the
5702 subsidiaries mixed with manufactured gas until 1927, when straight natural-gas service was inaugurated throughout the system."

By Mr. SPRINGER:

Q. Now, Mr. Coffman, do you know that the Pacific Lighting system owns two gas-producing fields?

A. Do you include in there Southern California Gas Company's holdings?

Q. Well, in the integrated system it would be included; yes.

A. All that has is one dry well, if you mean to include that.

Q. Doesn't your information show that there are two gas-producing fields held by the Pacific Lighting system? Do you know that, as you have stated, they purchase most of their requirements from three areas, the San Joaquin Valley area, which is hundreds of miles from Los Angeles; they purchase their natural gas from the coastal area, which is also many miles from some of the distribution centers, and they purchase natural gas from a basin area near Los Angeles; do you know that?

A. Generally.

Q. Of course they have to use those 1,000 miles of main transmission line to get the gas to market?

A. That is correct.

5703 Mr. COCKLEY. Well, just a minute. Are you testifying or are you asking the witness what he knows about that?

Mr. SPRINGER. He said yes.

Mr. COCKLEY. Did you answer the question?

The WITNESS. Generally; that is correct.

By Mr. SPRINGER:

Q. Mr. Coffman, you omitted from your study, Exhibit 27-A, the Arkansas-Louisiana Gas Company which has total outstanding securities of $34,000,000, all held by institutions and affiliates, didn't you?

A. The Arkansas-Louisiana Gas Company was eliminated for two reasons; first, the common stock was all owned by the Arkansas Natural Gas Corporation, but for another important reason, which was that 70 percent of the holding company's revenue comes from oil operations, it doesn't come from the gas business at all.

Q. Now, do you know that the Arkansas-Louisiana Gas Company has first mortgage bonds, 1940–1944, which sold in 1939 to yield 2.75 percent?

A. No; I don't know that right now. I don't have those figures here.

Q. You omitted from your study the Atlantic Seaboard Corporation which has total outstanding securities of $14,000,000. I suppose because it is all owned by affiliates?

A. I guess I eliminated that for another reason. We
5704 don't carry it in our service. Apparently there is no investment interest in it at all.

Q. Do you mean that if you don't carry it in your service, there is no investment interest on it?

A. We carry all the corporations in our service upon which we have any demand, and we have probably as large a list of investors as anybody in the country. I mean that is our whole basis for selecting the companies in our service. If we have a demand from any of our clients or any outsider, we try to get the information.

Q. Of course, if all the outstanding securities are held by affiliates as in this case they naturally wouldn't be any investment interest.

A. There wouldn't be any demand for information, and we don't have it and probably couldn't get it if we tried.

Q. And that is just another limitation of your study: you don't have complete information?

A. I made that announcement in my original statement, that I took only the companies we covered.

* * *

Q. Now, Mr. Coffman, you omitted from your study
5705 Cabot, Inc., which has total outstanding securities of $4,000,000 held by institutions and affiliates; did you not?

A. Yes; that is not included in the study.

Q. Now, for Canadian River Gas Company, which you omitted, the total outstanding securities are $6,000,000, all held by affiliates?

A. Well, that is according to my recollection; yes. I don't have anything on that.

Q. Now, for the Carnegie Natural Gas Company, which you omitted, there is $300,000 worth of common stock held by affiliates?

A. Well, I don't have the information here on that company. I don't know, really.

Q. Well, it is not included in your study?

A. That is correct.

Q. And you omitted from your study the Chicago District Pipe Line Company with $2,600,000 of total outstanding securities held by affiliates?

A. That company is omitted—I don't know about your figures.

Q. And you omitted the Cincinnati Gas Transportation Company with $6,800,000 of total outstanding securities held by affiliates?

A. Well, that company is omitted. Again, I don't know the figures.

5706 Q. You omitted the Cities Service Gas Company, with total outstanding securities of $73,000,000, $33,000,000 of which are held by institutions and $10,000,000 by affiliates?

A. That company is omitted—I don't know the figures.

Q. And you omitted from your study the Colorado Interstate Gas Company with total outstanding securities of $13,200,000 approximately, $8,800,000 of which were held by institutions and $4,300,000 of which are held by affiliates?

A. That company is omitted—I don't know the figures.

Q. You omitted from your study Consolidated Gas Utilities Company, with total outstanding securities of $8,000,000?

Mr. COCKLEY. Where is that? Is that in New York? What Consolidated Gas Company are you referring to?

Mr. SPRINGER. That company is engaged in the production, transportation, and wholesale of gas in western and northern Oklahoma and central and southeastern Kansas.

The WITNESS. That company is omitted—I don't know the figures.

By Mr. SPRINGER:

Q. Do you know that almost $8,000,000 or a major portion of those securities are held by the public?

A. I don't know that at the moment.

Q. Your study omitted the East Ohio Gas Company

5707 which has $38,500,000 total securities outstanding, all held by affiliates, didn't it?

A. That is not included—I don't know the figures.

Q. And of course the Hope Natural Gas Company, with almost $28,000,000 total outstanding securities held by an affiliate wasn't included?

A. That is not included—I don't know the figures.

Q. The Kentucky-West Virginia Gas Company, with total outstanding securities of $9,600,000 held by affiliates, was omitted?

A. That is not included—I don't know the figures.

Q. And you omitted Manufacturers Light & Heat Company with total outstanding securities of $22,500,000, all held by affiliates?

A. That is not included—I don't know the figures.

Q. And your study omitted Michigan Gas Transmission Corporation, with total outstanding securities of $8,700,000, all held by affiliates?

A. That is not included—I don't know the figures.

Q. And your study omitted Mississippi River Fuel Corporation with $16,400,000 total securities outstanding, $9,800,000 of which are held by institutions and the remainder held by affiliates?

A. That company is not included—I don't know the figures.

5708 Q. Do you know that the Mississippi River Fuel Corporation has $2,200,000 of notes held by institutions with interest at 2.75?

A. I don't know that.

Q. Now, your study omitted Montana-Dakota Utilities Company with total outstanding securities of $28,399,000, $24,400,000 of which were held by the public and $3,900,000 held by institutions?

A. I omitted that because 25 percent or better of its business is electric, and I couldn't segregate its income.

Q. Now, your study omitted the Natural Gas Company of West Virginia, with total outstanding securities of $5,300,000 held by affiliates?

A. The company was omitted—I don't know the figures.

Q. And your study omitted the Natural Gas Pipe Line Company of America with total securities outstanding of $51,400,000 all owned by affiliates?

A. The company is not included—I don't know the figures.

Q. Your study omitted New York State Natural Gas Corporation with securities outstanding of $6,500,000, all owned by affiliates?

A. That company is not included—I don't know the figures.

5709 Q. Your study omitted Northern Natural Gas Company with securities outstanding of $41,200,000, $22,000,000 of which is held by institutions and more than $19,000,000 of which is held by affiliates?

A. That company is not included—I don't know the figures.

Q. Do you know that the first mortgage sinking fund 3¼'s due 1954 of Northern Natural Gas Company—$16,000,000 worth—held by institutions sold in 1939 to yield 3.25 percent?

5710 A. I remember something about that issue, but I don't know the specific figures.

Q. Do you know that the Northern Natural Gas Company has notes, 1940–1946, in the amount of $6,000,000 held by institutions with an interest rate of 2.125 percent?

A. I don't.

Mr. COCKLEY. I object to that. There is no point in all this interrogation about specific securities without any question as to what they are a lien upon, what proportion of the total assets of the company they represent, what the dates of maturities of many of them are, and it is wholly disassociated from the properties and the business upon which they are a lien.

Mr. SPRINGER. I just stated all of those dates of maturity.

TRIAL EXAMINER. I assume that the purpose of the questions is to test the knowledge of the witness. Certainly it won't be evidence of anything when the witness answers each time that he doesn't know what the figures are.

Mr. COCKLEY. Well, if the purpose of it is to test the knowledge of the witness about apparently a lot of companies which, under the very term of the question and the limitations that the witness had imposed upon him by the necessities of having a market, show that most of these companies were perfectly properly excluded by him just because he couldn't get a market on them, that is,

5711 all. Now when it comes down to these specific securities, this witness isn't testifying here as to the rate for short-term bond money or for short-term obligations of any kind, or for bond obligations of any kind, or anything else. He has done a statistical job, that is all. So when you go to inquire about these mortgages and short-term loans and the rate of interest on them, isolated from all other securities, it has no pertinency at all to his direct examination.

Mr. SPRINGER. We are glad to know it is purely a statistical job, but we are entitled to test the basis of the selection of information to get those statistics.

Mr. COCKLEY. I would be glad to have you state how you think the witness can take into consideration capital securities which have no market when he has undertaken to determine the investors' appraisal as shown by markets.

Mr. SPRINGER. Of course, I have revealed several companies here with securities in the hands of the public which would show a market value.

Mr. COCKLEY. I haven't heard one.

TRIAL EXAMINER. Objection overruled.

By Mr. SPRINGER:

Q. Now your study omits North Penn Gas Company, with total outstanding securities of $7,200,000, $3,400,000 of which are held by the public and $605,000 by institutions, and the re-
5712 mainder, in excess of $3,000,000, held by affiliates, is that right?

A. The North Penn Gas Company was not included in the study because all the common and half the preferred is owned by the Penn Gas & Electric Corporation, and the balance is owned by the Penn Gas & Electric Company, and there were not facts enough to make any conclusion at all.

Q. Now your study omits Ohio Fuel Gas Company, with total outstanding securities of $71,000,000, 41/2 million of which are held by institutions and the remainder by affiliates, is that right?

A. That company is excluded; I don't know about the figures.

Q. Your study excluded Panhandle Eastern Pipe Line Company, with total outstanding securities of $54,400,000, $13,500,000 of which are held by the public, $11,250,000 held by institutions, and the remainder by affiliates, is that right?

A. Panhandle Eastern was eliminated, that is just a straight pipe line company.

Q. What do you mean by a "straight pipe line company"?

A. It is just a transmisison and producing company, it is what we call a long distance pipe line company.

Q. Do you know whether or not any of the companies to which it sells gas are affiliated?

A. The company is partly owned by Columbia Gas &
5713 Electric, and the rest is owned by the Missouri-Kansas Pipe Line Company.

Mr. COCKLEY. Is there any market for all of its securities?

The WITNESS. There is a market for some of its securities, but not for the majority, they are held by the Columbia Gas & Electric and the Missouri-Kansas Pipe Line Company.

By Mr. SPRINGER:

Q. Do you know that Panhandle Eastern Pipe Line Company's first mortgage and first lien 3 percent, 1960, in the amount

of $12,000,000, owned by the public, sold in 1941 to yield 2.87 percent?

A. I don't recall what the figure was.

Q. Do you know that the public owns a million and a half dollars' worth of common stock of Panhandle Eastern Pipe Line Company?

A. A very small portion of the total is owned by the public.

Q. Do you know that institutional investors own $6,250,000 of first mortgage, first lien, 1946–1950, of Panhandle Eastern?

A. I don't know those figures.

Q. And that they were sold in 1941 to yield 1.65 percent?

A. I don't know those figures.

Q. Do you know that Panhandle Eastern Pipe Line Company notes, .75 to 1.50 percent, 1941, in the amount of $5,000,000,

5714 are held by institutions.

A. I don't know those figures.

Q. Your study omitted Peoples Natural Gas Company, with total securities outstanding of $16,950,000, all held by affiliates?

A. That company is not included; I don't know the figure.

Q. Your study omitted the Pittsburgh and West Virginia Gas Company, with total securities outstanding of $21,690,000, all held by affiliates?

A. That company is not included.

Q. And your study omitted South Penn Natural Gas Company, with $10,000,000 of total securities outstanding, all held by affiliates?

A. That company is not included; I don't know the figures.

Q. Your study omitted Texhoma Natural Gas Company, with total securities outstanding of $19,450,000, all held by affiliates?

A. That company was not included.

Q. And your study omitted United Fuel Gas Company, with total securities outstanding of $19335,000, 4½ million held by institutions and the remainder by affiliates?

A. That company was not included; I don't know the

5715 figures.

Q. Your study omitted United Gas Pipe Line Company, with total securities outstanding of $125,360,000, $5,230,000 of which were owned by the public, $858,000 by institutions, and the remainder by affiliates?

A. That company was not included; I don't know the figures.

Q. Your study omitted Virginia Gas Transmission Corporation, total securities outstanding of $4,000,000, all held by affiliates?

A. That company was not included; I don't know the figures.

Q. And your study omitted Warfield Natural Gas Company, with total securities outstanding of $10,300,000, all owned by affiliates?

A. That company is not included; I don't know the figures.

Q. And one more company was the West Texas Gas Company, with total outstanding securities of $5,000,000, $3,000,000 owned by institutions and $2,000,000 by affiliates?

A. That company was not included; I don't know the figures.

Q. Now, Mr. Coffman, of the total of $1,185,000,000 of outstanding securities of the major natural gas companies in the United States, would it be a fair approximation to say that 31 per-
5716 cent is held by the public, a little over 15 percent by institutions, and more than 53 percent by affiliated interests?

A. I wouldn't want to pin myself down to those percentages for the moment, but generally speaking there are a number of companies in the industry which are controlled, one way or another, through systems and therefore no part or any part of their securities is traded in the market and consequently has a market quotation.

Q. Well, can you state from your knowledge that you gained by making this study of selected companies, that more than half of the total outstanding securities of the natural gas companies in the United States are owned by affiliated interests?

A. Well, I would say that that is approximately correct.

Q. Then you don't know that 28 natural gas companies have all their securities owned by affiliated or institutional investors, and that 15 natural gas companies have their securities held by the public?

A. Well, generally, I know the names of the companies. As a matter of fact, I considered all of those in the original study and eliminated them wherever there were not market quotations to get information from.

Q. You didn't make a rate of return study for the Hope Natural Gas Company, did you?

A. No; what I did was to make a study which showed the
5717 investors' appraisal of the risks of capital, on the basis stated in the report filed.

Q. A purely statistical study?

A. Purely a statistical study.

Q. And you didn't make any comparative analyses of your 13 natural gas companies and the Hope Natural Gas Company on a

*consideration of operating revenues, earnings, dividends, gas supply, and gas markets, did you?*

A. No, sir.

Mr. SPRINGER. That is all.

TRIAL EXAMINER. I am not sure whether you made this matter of market quotations clear in your original testimony as to just how you determined those market quotations. I assume that the quotations were of actual sales of securities?

The WITNESS. Well, in most cases they are either New York Stock Exchange or New York Curb Exchange quotations, except in one or two instances where they were bid and asked prices for the entire year. What I did was, if it were a stock market quotation, to take the high and the low for the entire year, and then I took the average of that as being the best approximation of the even figure in between, and did the same on a bid and asked quotation.

TRIAL EXAMINER. All the securities you used, then, were listed either on the New York Stock Exchange or on the Curb, is that correct?

5718 The WITNESS. That would be correct for the great proportion of the indicated market value. For instance, if I had an indicated market value as in Pacific Lighting of around $166,000,000, the greater proportion of that was based upon the securities that were traded in a recognized exchange, and did have a high and low and closing price quotation.

TRIAL EXAMINER. Now on what was the smaller proportion based?

The WITNESS. That would be in those few instances, such as I told Mr. Springer, where there might have been a bank loan or a serial note upon which there was no trading whatsoever, and I took those at par as indicated, or if there was a call price higher than the par, I took that; otherwise, if I made an estimate where in one case I said 105.56, that was based on the position of the particular mortgage bond in the capital structure, and the maturity date, which I knew from the way securities of that type were selling, should have sold above par, and I would take that which approximated the actual yield basis——

TRIAL EXAMINER (interposing). You didn't take into consideration the activity of the stock in the market, did you?

The WITNESS. No; I didn't consider volume. What I wanted to be sure of was that there were actual shares traded or bonds traded day in and day out, which gave enough of markets. Now

whether it might have been, during the course of a year,
5719 ten million shares traded or five, I didn't consider that;
no, sir.

TRIAL EXAMINER. But there had to be sales from day to day and not just perhaps once a month?

The WITNESS. Yes, sir; there had to be sales from day to day; and I did not consider private sales where there was just one sale, such as to an institution or an insurance company, where it was going to be locked up and not in the market any more, such as those that Mr. Springer has been mentioning recently.

Mr. SPRINGER. You are not an investment counselor, are you?

The WITNESS. Standard and Poor's Corporation is investment counselor, and I am Vice President in charge of one division of that business.

By Mr. SPRINGER:

Q. You don't counsel on investments and advise clients to make certain investments?

A. I personally have in charge people that do; I don't do much of that directly myself.

Q. You don't?

A. No, sir.

TRIAL EXAMINER. Well, the number of shares of stock of a particular company being traded in would affect, to some extent, the market price of the stock, wouldn't it?

The WITNESS. I think I would have to answer your ques-
5720 tion this way, that if there were some unusual conditions in the market whereby volume increased considerably, let us say on the selling side, that the price might be driven down. The reverse would be true if the volume increased because there was a sudden run for the stock and people were buying and buying and the price might go up. But that, generally speaking, would be for a relatively short period of time, and I felt that in this study where I took 1937, 1938, and 1939, and now have included 1940, and took the year range, that any such wide fluctuations as you might get by an unusual situation were wiped out because you don't have a condition of that sort ranging over a long period of time—I mean for those odd fluctuations. So that, taking a year's range, you would get a fairly close approximation of what would be considered a reasonably normal figure for the amount of trading that is being done during that period.

TRIAL EXAMINER. Does the City of Cleveland have any questions?

Mr. Reeder. No questions, Mr. Examiner.

Trial Examiner. West Virginia?

Mr. Koontz. No questions.

Trial Examiner. Is there any redirect?

Redirect examination by Mr. Cockley:

Q. Mr. Coffman, does your exhibit show, in your opinion, the investors' appraisal of the risk of capital in the natural gas business for each of the years you have given?

5721 A. I think it does, because on any other companies that were mentioned, which were owned by affiliates or otherwise, there was no way to appraise that risk, to my knowledge.

Q. But my question now is whether or not, in your opinion, the figures shown by you each year for the natural gas business are the investors' appraisal of the risk in that business for that year?

A. I think it very definitely is.

Q. And is the same true for electric companies, year by year?

A. Yes, sir.

Q. And for the other utilities that you show?

A. Yes, sir.

Q. Now, Mr. Springer has called your attention to a number of companies. Has he called your attention to any company which you now think properly should have been included by you in this study?

A. No, sir.

Q. And which you omitted?

A. No, sir; I do not think any of the companies he has mentioned could have been included on the basis of the study as I made it. I stated clearly the basis of the companies that were considered, to begin with, and what the final selection

5722 came down to.

Q. And I am correct that the companies that you have included here include all of the natural gas companies upon which information of the kind that you were seeking was available?

A. To my knowledge it includes them all within the limits that I have stated in my two reports.

Q. Mr. Coffman, I don't know whether you completely cleared up the matter or not, but the question is still in my mind as to whether or not you in any case took a market price or a market quotation that represented completely inactive or a very inactive market, as for instance only an occasional sale, once a month, or something of that kind?

A. For the great bulk of the total indicated market value, there was ample trading on the securities. There are, on a few items, bid and asked prices, where there was trading, but I think we all know over-the-counter trading cannot be accurately checked as to the volume of shares, so that many times, although you have a reliable quotation, you don't know how many shares it involves.

Q. But that would be in case of the minor securities of a few of these companies?

A. In every case it was.

Q. And when you talk about quotations on the New York Stock Exchange, of course you refer to the reported price
5723 at which securities were actually sold?

A. Yes; I am taking the quotations as recorded in all the reputable papers, and by the New York Stock Exchange and Curb Exchange themselves as to the quotations.

Q. Now do you know of any producing field owned by the Pacific Lighting Corporation or its subsidiaries?

A. I don't know of any.

Q. Am I correct that Pacific Lighting Corporation, in addition to its distribution of natural gas, until a few years ago was also a very large distributor of electricity?

A. It was, yes, sir; until recently.

Q. And in what year, can you tell us, where the electric properties sold and its activities thereafter limited to the distribution of natural gas?

A. I believe it was 1937.

Mr. SPRINGER. That is right.

The WITNESS. January, 1937, the electric properties and business were sold to the city.

By Mr. COCKLEY:

Q. The City of Los Angeles?

A. Yes, sir.

Q. Am I correct, then, that the history of the company is that it served—the history of this holding company—that it and its subsidiaries served manufactured gas and electricity in Southern California territory up to 1913?

5724 A. That is correct.

Q. And from 1913 to 1927, it served mixed manufactured and natural gas, and electricity?

A. That is correct.

Q. And then from 1927 to 1937, January 1, it served straight natural gas and electricity?

A. Yes, sir.

Q. And it is only since 1937 that its sole business has been the distribution of natural gas?

A. That is correct.

Mr. SPRINGER. What do you mean by distribution? There are 1,600 miles of transmission lines in that integrated system. I object to the form of that question, and move that the question and answer be stricken.

TRIAL EXAMINER. Why?

Mr. SPRINGER. Well, it assumes facts not in evidence here. There is no evidence that it is purely a distribution system. He has admitted that they have 1,600 miles of transmission line.

Mr. COCKLEY. All right, if it will please Mr. Springer, I will say the transmission and distribution; will that make you happy?

Mr. SPRINGER. That is more accurate; that is, all I am seeking are the facts.

The WITNESS. That is correct.

5725 By Mr. COCKLEY:

Q. How many cities and communities did you tell us, Mr. Coffman, this company serves?

A. I think it is about 242.

Q. And do you know what the total population served is?

A. Yes——

Mr. SPRINGER (interposing). About 3½ million, isn't it?

The WITNESS. I have got the figure, the territory covers an area of about 38,500 square miles, and the population is about 3,495,000.

## TESTIMONY OF HOPE WITNESS BROWN ON HISTORICAL RATE OF RETURN

Transcript Pages 5881–5914

(Omitted in Brown's Testimony Printed in Supplement to Brief of Petitioner)

5881 Cross-examination by Mr. SPRINGER:

Q. Mr. Brown, referring to your testimony on the historical rate of return related to the four periods of the Hope Company's history, I believe it was your testimony that you thought a rate of return reasonably to be expected in the period 1898 to 1907 was 15 to 20 percent?

A. Yes.

Q. And you called that the development period?

A. The early development period, yes, and I considered the minimum return to be expected to attract capital, 15 to 20 percent. I might say that I understated that.

5882 Q. Now in your second period, 1908 to 1926, you reached the figure of 12 percent?

A. That is correct.

Q. And you called that the maturity period?

A. A certain stage of maturity and permanency.

Q. Now in the period 1927 to 1934, you reached a conclusion of 10 to 11 percent?

A. That is correct.

Q. And you called that the period of rising quality rating for natural gas companies and the long distance pipe line era?

A. Well, the rising quality rating of natural gas companies I put in the fourth period, but a big broad expansion of markets for natural gas companies fell in this period from 1927 to 1934, with a very large increase in interest on the part of the investing public and the investment banker.

Q. Now in your fourth period, 1935 to date, you reached the conclusion that an 8 percent rate of return might reasonably be expected?

A. Not less than 8 percent is correct.

Q. And you described that period as one of declining money rates?

A. Declining money rates and increased quality rating to the senior securities of natural gas companies.

Q. Now when you speak of the rate of return reasonably
5883 to be expected by the investor, do you relate that to the cash contribution that is made by the investor to the enterprise?

A. In general. It means the rate of return that is necessary in the best judgment to attract capital. Capital usually means cash, cash investment.

Q. Now at pages 5209 to 5210 of the transcript, Mr. Cockley stated the purpose of presenting your type of testimony on historical rate of return. I wonder whether you adopt his theme, which in essence is this: If you are going back to a rate base that is an accumulated history over a long period of years, then the right rate of return to go with that is the historical rate of return that should accompany original cost. Then he explains the rate of returns that they reasonably had a right to expect at that time when they invested their dollars in that property. Do you adopt that theme?

A. Yes; I adopt that theme, on this basis, that it seems a matter of fairness and justice on the part of any regulatory body, that if a rate of return on the investment is allowed for bonds or stock, and the investor makes his investment on that basis, that he is entitled to the end of his investment at that rate of return. He has got to take his chances on an increase in values or on a decrease in values, and on the improvidence on his part and the part of the managers of the property, he has to cast in his lot.
5884 If the investment increases in value, it seems to me that it would carry with it a contemporary rate of return, but if the investment remains stationary, the rate of return has got to carry through to the end, based on its original figure.

So I adopt Mr. Cockley's thesis in full, on the basis of fairness.
5885 If I invest a dollar in 1900 on the basis of 20 percent rate of return, then I expect to get 20 percent indefinitely, but on the other hand if my dollar advances, then I should expect to take my luck on any increase or decrease, presumably a decrease, in the rate of return.

Q. Now, when you say "rate of return on investment," do you originally relate that to the cash investment of the investor, and now when you speak of a change in the value of the investment, what do you mean?

A. Well, if I invest a dollar in farm land in 1900, with labor at 15 cents an hour, I should expect to get the same rate of return on that indefinitely in that farm land, at 15 cents an hour. If that farm land advances in value, based on 40 or 50 cents an hour labor, and a rising cost in land, then I should expect to take my chances on whatever the market rate of return was in the future. Answering your question specifically, your capital that is invested in any property years ago, naturally in the form of cash, would carry on with the same rate of return on that particular property in my mind or in the minds of any investors.

Q. The labor cost that you mentioned for operating a farm, related to a regulated utility, is an operating expense which is covered by the consumers' rate, is it not?

A. Yes.

Q. Now, on page 12 of your Exhibit 19, you say that
5886 it is your opinion that investors would not at the present time provide the capital for the Hope Natural Gas Company unless it was allowed and was earning at least 8 percent upon whatever is determined the fair value of its natural gas properties. Now, that seems to be at odds with the theme that you adopted on the rate of return to be expected upon the cash invested in the enterprise?

A. I don't see the discrepancy, Mr. Springer, but I might amplify it by saying that if you were to attract capital today to the Hope property, in my judgment it would cost you at least 8 percent over-all return on whatever is found to be the fair value of that property as of today.

Now, if you go back to some smaller value, naturally the 8 percent still holds.

I am not concerned particularly with what the rate base is going to be. I am testifying as to the rate of return on some rate base, and in my judgment it is not less than 8 percent.

Q. Whether or not the investor has contributed $50,000,000 or $100,000,000 to the enterprise, you would still recommend an eight percent rate of return?

A. That is correct.

Q. Now, on Exhibit 19, page 45, you state that more specifically the problem reduces itself to one of what rate
5887 of earnings the Hope Natural Gas Company would have to enjoy at the present time on its natural gas properties to enable it to replace the money invested in them.

How do you reconcile that with the theme adopted by Mr. Cockley, and by you?

A. Well, I am concerned entirely with a theoretical refinancing problem. As I testified the other day on direct rebuttal, I called attention to the Southern Natural Gas Company which was practically a complete refinancing job. The investor is interested in yield on his money; in security; in future prospects; and other things. He is given a prospectus of what the value of that property is.

Now, the property may be a large figure, it may be a small figure. He is interested in the items that I have just mentioned.

Now, in reconciling this with what Mr. Cockley said, if the investor thought that in the next 15 or 20 years this property—assuming a refinancing operation as of today—would not be allowed to advance with advancing costs of materials and labor and other things, he would be rather hesitant to invest his money in it.

In other words, the theory of "heads he loses, tails the other fellow wins" would scare the investor away in part at least.

The investor takes his chance on a decrease in investment,
5888 or an increase in investment; and by "investment" I mean the rate base.

Over a period of 100 years, I think it is well known that labor costs have gone up, many materials have gone up. If the investor feels that he is going to be shut off from any advance in the future on materials and labor costs, for future rate bases, I think he would be pretty well scared and stay out.

Q. Are you making any distinction between the speculative investment in industries that are not regulated and investment in the utility industry?

A. No; they are one and the same because capital will go into a speculative industry or into a public utility industry along the same general principles.

Q. And those principles are hope of gain and fear or loss, I take it?

A. Those are two of them. There is also security as regard first mortgage bonds, where there is no hope of gain. In other words, a man buying a first mortgage bond is not particularly interested in any gain, he wants security of principal and security of yield, income.

Q. Well, I consider yield a gain.

A. All right, I will accept that.

Q. Now, you relate your rate of return to be expected at the outset, to the capital invested by the investors, isn't that so?

5889 A. Yes.

Q. Now, that is distinguishable from the original cost or historical cost of the properties, is it not?

Mr. COCKLEY. I don't know what is distinguishable from what. Your question is not clear to me.

TRIAL EXAMINER. As I understand it, it is the amount of money invested as distinguishable from the original cost.

Mr. COCKLEY. How is there any difference between those two? I don't get it.

TRIAL EXAMINER. Do you understand the question, Mr. Brown?

The WITNESS. I think I understand the question, Mr. Examiner, but I am trying to think of an answer. Naturally a million dollars put into a property in 1900——

By Mr. SPRINGER:

Q. (Interposing.) Is this a cash investment?

A. $1,000,000 in cash put into a property in 1900 is worth more than $1,000,000 today, everything else being equal, assuming the company to have been in operation successfully during the last 40 years.

5890 If you allow the original cost of the property which was paid for with cash, and allow no increment due to rising costs of everything in the last 40 years, or nearly everything, I think you would have a tough time attracting capital to a utility today, or tomorrow, or for the next period of years.

Q. Do you make any distinction between investors' capital contributions and consumers' capital contributions in a utility enterprise?

A. I don't know of any consumers' capital contribution except the price of a stove.

Q. Well, do you know that excessive rates for the service rendered is considered a consumers' contribution?

A. It might be so. I don't approve of any excessive rates.

Q. Mr. Brown, your four periods for the Hope Company correspond generally with the Nation's economic history, do they not?

A. Yes; with that chart you have there. They correspond in general with the chart showing the economic history of the United States, but there are many more than four periods during the last 41 years.

Q. Then, it isn't a coincident that the four Hope periods you selected are parallel with the economic history of the nation?

5891 A. If I understand your question, there are many more than four periods in the last 43 years, 1898 to 1941. I grouped them in four periods due to certain characteristics which obtained in the entire natural-gas industry. Now, breaking those periods down into smaller periods, they would in general correspond to a chart of the economic history of the United States.

Q. Now, do you, as an investment banker, contend that an investor making a permanent investment in capital stock expects always to get the rate of return that happens to be current at the time he makes that investment?

A. Now, he has got to take his chances with decreased or increased dividends, but he makes the investment at the time with the hope and reasonable expectancy of that same rate of return, subject to the good and bad of the future.

Q. And do you know that a rate of return higher than the then prevailing average will in time attract more and more investors to a particular enterprise?

A. I think that is self evident.

Q. In other words, an attractive investment will secure additional investors until that rate that was higher than the prevailing average has raised the norm, more or less?

A. Well, when we come to float a bond issue, we compare all the other bond issues of that type that we can find—in fact, I have done it in the last 48 hours—and we take the

5892 average of the yields. If the average of those yields is 3.50 percent, then we set up our bond issue to yield 3.55 or 3.60, a very slight increase in the bond issue yield, to make it more attractive.

With the stocks, the principle obtains, with possibly a slightly wider margin of yield, but that difference is very small and doesn't affect my rate of return of 8 percent.

Mr. SPRINGER. May I have my question read? I think your answer is "yes" to my question.

(The question was read by the reporter.)

The WITNESS. I should have started my answer with "yes."

By Mr. SPRINGER:

Q. Your answer is "Yes"?

A. Yes; with that qualification.

Q. In other words, the investors are aware of the law of supply and demand as it is related to capital?

A. In general, they are; yes.

Q. And the investor, particularly as a common stockholder, knows that his return will not be the same each year but that he must suffer the ups and downs of the economic cycle?

A. Yes; that is true.

Q. Now, in Exhibit 19, page 8, you state that from an investor's viewpoint, the Hope Natural Gas Company does not have possibilities of growth, and therefore its securities would
5893 be less attractive than, for example, some other gas company, and on page 9 you say that fluctuations in revenues, plus the declining trend of production in West Virginia, and other considerations, indicate to the investor declining rather than increasing sales for the Hope Natural Gas Company over any considerable future period. Those are statements that appear in your exhibit, are they not?

A. That is correct.

Q. Now, did you testify that long-distance transmission lines have tended to stabilize the natural gas industry?

A. I did.

Q. Now, in view of the testimony by Mr. Tonkin that there has been a tremendous increase in the sales of the Hope Natural Gas Company, and that they propose to spend millions of dollars to augment the production and transmission system of the Hope Natural Gas Company to meet increased demands, and have even proposed a $25,000,000 pipeline extension to Louisiana, exceeding 800 miles, I believe, would you care to alter any of your statements in Exhibit 19?

Mr. Cockley. I object to that as not a complete statement of Mr. Tonkin's testimony at all. In the first place, the proposal is to become effective several years hence, and I don't think the question fairly includes all of Mr. Tonkin's testimony. If he
5894 wants to ask an expert witness, I think he should give him an opportunity to read Mr. Tonkin's testimony, or read it to him, and then ask him any questions he wants to about it. This isn't, as I understand it, cross-examination on his testimony of the other day, but rather it goes back to his original testimony at Clarksburg.

Mr. Spilnger. That isn't so at all, because he reiterated that he didn't choose to change his original——

Mr. COCKLEY (interposing). I am not objecting on that ground, but I think if you want to be fair to the witness you should ask him to read Mr. Tonkin's testimony, or else read it to him.

TRIAL EXAMINER. Or state a hypothetical question, if you are unable to state just exactly what Mr. Tonkin's testimony was. Of course, you are tying this in directly now to Mr. Tonkin's testimony.

Mr. SPRINGER. Well, if Mr. Brown doesn't know about the growth of the Hope Company's system, and the proposed new pipe line, I don't see how I can ask him any questions about it.

TRIAL EXAMINER. I don't know that that makes any particular difference. You can state a hypothetical question, including those elements, and ask him whether or not that would have any effect on his judgment. That is what you are trying to find out, isn't it?

Mr. SPRINGER. Yes; I didn't want to resort to hypotheses
5895 when there is evidence in the record of the growth and the proposed pipe line.

TRIAL EXAMINER. I don't know what else you can resort to, unless the witness already knows what the testimony is.

By Mr. SPRINGER:

Q. Do you know, Mr. Brown, that Mr. Tonkin testified that there was an increase in gas sales of from 50,000,000 M. c. f. in 1939 to an expected 70,000,000 M. c. f. in 1941?

Mr. COCKLEY. I don't think that is a correct statement. Have you the figures before you for 1939?

The WITNESS. I have, for 1939. I know in general about the plan for an extension at a cost of roughly $25,000,000 down to Louisiana. I don't know when that can be completed, or any of the details about it, but it seems to me it confirms my testimony of a year ago that the growth possibilities were extremely limited.

On page 8 of my direct testimony of a year ago, I show the declining tendency in West Virginia natural gas output, and I bring out that point very distinctly, that the growth possibilities would go a long way towards scaring off the investors in Hope Natural Gas property a year ago. I see nothing to change my opinion as of today.

The Hope Company, in M. c. f. of output reached its peak back in 1915, approximately duplicating it in 1916. Then there was a long decline until 1933; then there was some pick-up
5896 from 1933 until 1937; then a decline, and then a very marked

pick-up for the last year and a half, very largely due to the boom.

Now, an investor goes into a utility not with any view of a boom but with a long-range investment standpoint, and the building of this pipe line would indicate a ceiling on output in the neighborhood of 60 or 70 million M. c. f., which is much below what the output used to be, in fact it is below what it was prior to the first World War in 1912 or 1913.

That is what I was alluding to when I said that the growth possibilities were extremely limited and I put growth possibilities at the top in weighted value, as to the list of factors necessary to attract capital.

By Mr. SPRINGER:

Q. Do you mean by "growth possibilities," the possibility of additional natural gas in West Virginia for Hope?

A. West Virginia and over into Kentucky, without a very large outlay of money. Now, what they have got to do, as I understand it, is to put a very expensive pipe line down into Louisiana, and I remember testifying to this last year, that it meant either Louisiana or Texas in order to fill the demands.

Q. Do the statistics for the tremendous increase in the sales of natural gas reconcile with your statements in Exhibit 19?

5897 Mr. COCKLEY. I object to the question unless it is more specific, specifying what increases and what statement and——

TRIAL EXAMINER (interposing). What increases are you talking about, and over what period?

Mr. SPRINGER. Well, I believe you are aware of the 50 million M. c. f. sales in 1939?

The WITNESS. Yes.

By Mr. SPRINGER:

Q. And the increase which is predicted to reach 70 million M. c. f. this year?

A. Yes.

Q. Then, on page 9 of Exhibit 19, you say there is an indication of declining rather than increasing sales for Hope Natural Gas Company?

A. I state on page 9 that the declining trend of production in West Virginia plus the fact that for a few days in 1940 many industrial consumers dependent on Hope were curtailed to conserve the supply for domestic users, indicate to the investor a declining rather than increasing sales for the Hope Natural Gas Company over any considerable period.

Now, I say nothing about going out and buying a property, or extending a line 800 miles away. That is always in the range of possibility to any company, but at an additional cost of
5898 capital which will at the same time dilute the capital already invested.

Q. But, of course, Hope has experienced these increased sales without building a new pipe line to Louisiana?

A. True, and have reached a ceiling there at 70 million M. c. f.

Q. Do you predicate that that is the ceiling?

A. Well, I don't know whether that is the exact ceiling, but I think it is common sense to call it a ceiling when they are going out and spending $25,000,000 to get an additional supply of gas. It seems to me that it is self evident.

Q. Do you mean to imply that an investor, who invested his money in the first period of Hope's history, expected to earn a rate of return of 20 percent forever on that investment?

A. Yes; and I am understating it at 20, probably 25 percent. If you knew anything about the mining or oil business in those days, you made anywhere from 25 percent to 100 percent or else you didn't put any money into the ground.

Q. Now, you have related the Hope Natural Gas' early history to the oil business.

A. It has many similarities with the oil business, and it has today.

Q. Well, now, isn't one of the chief causes of regulation, the higher rate of return that was made possible by the high prices of monopoly in the early years?

5899 Mr. COCKLEY. I object to that, we are getting awfully far afield on speculations of that sort.

TRIAL EXAMINER. I don't know just what knowledge this witness would have of that.

Mr. SPRINGER. Well, he has spoken about the Standard Oil Company with its operations in oil and natural gas, and he has related the natural gas business to the oil business, and I think it logically follows that the history of the nation has recorded the development of regulation to control the high rate of return made possible by the high prices of monopoly in the early years.

TRIAL EXAMINER. You think this witness then should know what has caused the regulation?

Mr. SPRINGER. He really should if he is a student of the economic history of the United States.

TRIAL EXAMINER. Well, I will let the witness answer.

The WITNESS. Well, I am a firm believer in regulation of natural gas companies, and I am a firm believer in regulation of all public utilities. To that extent, natural gas companies differ from oil companies, and naturally any company that is subject to regulation perhaps has two differing factors involved as governing the attraction of capital; one, the regulation tends toward stability; and two, the regulation tends toward a restriction of
5900 profits. One is favorable, perhaps, and the other is less favorable.

By Mr. SPRINGER:

Q. Do you know that the natural gas industry was subject to regulation through the whole period?

A. I do.

Q. That you have testified about?

A. Yes.

Q. Now, wasn't the investment of the Standard Oil Company, of money in the Hope Natural Gas Company at a time when Standard Oil was, as you have testified, able to earn about 25 percent on its investment, an indication of the high profitableness of the natural gas business in West Virginia, perhaps to its monopolistic nature, rather than an indication of the cost of money for a natural-gas public utility?

Mr. COCKLEY. Well, that is a statement——

The WITNESS (interposing). No; I don't think so. The Standard Oil Company had properties all over the world. Of course, they were much smaller then than they are today, and to get anybody to go out into the hills of West Virginia and sink a gas well in 1898 called for a high cost of money, and there were mighty few individuals that were willing to do it; and outside of the two or three oil companies, I don't think it could have been done.

My point in bringing that Standard Oil figure of 25 percent in, was to get some idea of what the Board of Directors
5901 of the Standard Oil Company might be thinking in 1898 when they wanted to risk some money in the West Virginia hills, which was a young industry and a brand new enterprise in a young industry.

I can't think for a Board of Directors in 1898, but applying the same conditions of 1898 to 1941, I wouldn't sit on any Board of Directors and start to sink money out in the wilds of Australia for natural gas, with no market and only a half a knowledge of what I was going to find, for less than 25 percent.

By Mr. STRINGER:

Q. Do you mean that the people in Ohio weren't begging for natural gas in the early period of Hope's history?

A. They were, but they were getting it from little local fields around Ohio. They didn't introduce it into Cincinnati until many years after 1898.

Q. Do you know that the Hope Company was supplying natural gas to the East Ohio Company?

A. It started very early, yes; but the great majority of the output of the Hope Company for several years after 1898 was field sales to oil and gas companies in West Virginia for use under their boilers. In other words, it wasn't a public utility in any sense of the word.

Q. But immediately after that it entered into the public-utility phase of its history?

5902 A. No; I wouldn't say it did until about 1906 or 1907 when the percentage of sales of Hope turned from being mostly field sales to being sales to domestic and industrial consumers. When the percentage crossed the 50-percent line to industrial and commercial consumers, then it became essentially a public utility.

Q. Now, one of the inventives to invest in a new, untried enterprise is the prospect of a higher rate of profit, isn't it?

A. Yes.

Q. And this is probably true because there is no past history for enterprises to assure the investor of the degree of safety of his investment?

A. Yes.

Q. But as the industry becomes seasoned and proven, it is reasonable to expect the rate of profit to decline?

A. Yes; generally.

Q. Now, you have stated that one of the stabilizing influences in the natural-gas business has been the transmission of gas by means of long-distance pipe lines since 1926, I believe?

A. Well, since about 1926–1927; yes. I wouldn't use the word "stabilizing" exactly. That was what made the public interested in natural-gas securities on a national scale. It did stabilize

5903 it to a large extent, but it brought in new markets, great metropolitan areas.

Q. And of course that means that the cost of money is reduced?

A. That is correct.

Q. And this [illegible] of stabilization should tend to lessen the risk to the investors in a company like the Hope Natural Gas Company?

A. Yes.

Q. Now, on page 5225 of the transcript you testified that 1934 was the end of the normal money market. What do you mean by the words "normal money market"?

A. Well, that is a rough figure, 1934. We started to see a decline in money rates—any table of bond yields will show that—money came very easily around 1935, increased in easiness in 1936 and the following years, and we had an abnormally easy money market in the last five or six years, with yields of high grade bonds declining from 4½ to 5 percent down to 2¾ percent.

Q. In your opinion, then, low interest rates constitute abnormality?

A. Well, that is a large subject. My personal opinion is that 10 or 20 years from now, or less—I don't know—high grade bonds will work back towards a 4½ percent yield, but when that day comes no man knows, it always has in the past.

5904 Q. Do you think low rate of interest is an unusual thing?

A. It certainly is. The lowest interest rates in the history of the United States have been in effect in the last few months.

Q. What is your norm so that you can reach a description of this period as being abnormal?

A. I just gave it to you—high grade bonds, 4½ to 5 percent; the next type of quality bond, 5 to 5½ percent.

Q. And do you know of any period in the nation's history that was relatively close to that cost of money?

A. Yes; it appeared around 1900 when railroads could finance on a 3 percent basis, but it wasn't as low a rate level as it is today.

Q. Again we are speaking in relative terms?

A. Well, yes; what was the question?

(The question was read by the reporter.)

The WITNESS. For a few months it was relatively close, in 1900, it was relatively close to today.

By Mr. STRINGER:

Q. I believe you described the Hope Company at certain periods as essentially a mining company?

A. I did.

Q. And what is the basis of that description?

A. Well, the essence of a mine is something that is
5905 taken out of the ground, and you have only a partial knowledge of what is underground. Therefore, you have a very substantial factor of risk. The reserves can be measured only in part, and at best they are estimated, and at the same time you have a wasting asset; a wasting asset, in the eyes of an investor, is a very serious thing. It means you have got to look for more reserves all the time, either in the same territory or further afield, and I would say that Hope has many of the essentials of a copper mine of the better class, or an oil company of the better class. I don't rank them with these "cats and dogs." I put them on the same basis as the upper group of mining companies and oil companies.

Q. The risk you speak of related to wasting assets, a wasting asset industry, will be minimized for the Hope Company by the new pipe line to Louisiana, and then the proposed extension to Texas that Mr. Tonkin testified about?

A. Certainly the risk will be reduced by this pipe line, but at the same time there is an element there of probable decrease in earnings due to the increased cost of capital. You can't raise $25,000,000 and put it to work overnight. It will take some time before that is reflected in increased earnings.

Q. Are you informed that the Hope Company will go into the public market for this money?

A. I don't care whether they go into the public mar-
5906 ket or whether the Standard Oil Company advances the money, it is all one and the same. The capital is the same whether it is advanced by A or B.

Q. What if the Hope Company has sufficient funds of its own?

A. Well, it hasn't got sufficient funds of its own. It can borrow.

Q. Do you know how many millions it has invested in securities?

A. I do, or at least I looked at the December 31, 1940, balance sheet, recently, and it hasn't got $25,000,000 of cash and Governments.

Q. Would you say that they would have to earn an 8 percent rate of return on that $25,000,000 to attract investors?

A. Not at all. I would say they would have an 8 percent overall rate of return if they went into the public markets.

Q. Now, do you know that what you referred to as a wasting asset is covered by consumers' rates in annual depletion allowance?

A. Yes, I do.

Q. And do you know that the history of the natural gas industry has been that additional gas reserves have been discovered which have gradually increased the total amount of natural gas reserves recoverable in the United States in the last two decades?

5907 A. I do, a very large increase in the natural gas reserves throughout the United States, but you will find that that increase is almost entirely confined to the far west and the southwest.

Q. And Hope has a proposed pipe line to go to Louisiana now?

A. Yes.

Q. Where additional reserves are located. Now, do you know how much gas is purchased by the Hope Natural Gas Company to meet its requirements, just the proportionate amount?

A. Oh, two-thirds, roughly. I can give you the exact percentage. I have checked with the engineers, but I don't recall the exact figures.

Q. Now, the fact that Hope purchases two-thirds of its requirements, does that change your opinion that it is essentially a mining enterprise?

A. Not in the slightest. You asked me the same question in June of 1940, and my answer was substantially as follows; That the vendors or independent producers mined gas and sold it to Hope; and they had all the risks and uncertainties that go with the Hope Company's own wells. They are one and the same in the eyes of the public.

Q. I believe you stated that Hope was essentially a public utility since 1907?

5908 A. I wouldn't put it as definitely as 1907—since about 1906 or 1905.

Q. Well, the fact that Hope——

Mr. COCKLEY. You are not asking that in any legal sense, are you, Mr. Springer?

Mr. SPRINGER. Well, all my questions are legal questions.

Mr. COCKLEY. Well, if they are, then I move to strike out the whole cross-examination, but as I understood Mr. Brown's testimony it was because so large a part of Hope's sales were field sales prior to about 1906 or 1907, and he wasn't very specific about the date; that he didn't really consider it to be a public utility before that time, without trying to put that in a technical sense, and

you are not now trying to ask him whether legally and technically it was a utility subject to regulation, are you?

Mr. SPRINGER. Well, of course, Hope was rendering service to the public in this period you speak of since 1906, and was subject to regulation by West Virginia by an early period.

The WITNESS. Yes, it was rendering service to the public prior to 1906 in a small way. The public looks at things in a large way, and technically it was a public utility prior to 1906, but actually it was in the same category as an oil company.

By Mr. SPRINGER:

Q. You mean that if it purchases two-thirds of its
5909 requirements it isn't a merchandising company?

A. Well, the word "merchandising" covers a broad field. I don't call it a merchandising company. It mines gas from its own wells, and it buys gas from somebody else's wells. Now, they are one and the same type of wells—it has its gathering lines. If a well belonging to an independent operator gives out, then that gathering line becomes obsolete or has to be taken up and placed elsewhere.

Now, the same risks and uncertainties follow the independent operator as they do the Hope Company with reference to its own wells. It is a mining or producing company, and I don't make any distinction between those two types of wells, owned by Hope and owned by the other people.

Q. Is the basis of your opinion on these various unusual rates of return, the average investor's attitude toward the gas industry? You spoke of the general public, I believe, the small investor.

A. No; because the small investors were not in the natural-gas industry in the early days. The National Fuel Gas has a common stock issue which came about by a former merger. The Company was originally a trust, starting in 1882. In 1890, sometime, it developed into shares of stock which didn't have any market value until, I think, about 1921.

5910 There were no small investors in natural-gas companies, to amount to anything, prior to 1921, and even later.

Southern California Gas started a subsidiary, Pacific Lighting, which had both electric properties and gas properties. In fact, Southern California Gas started originally as a manufactured-gas company, and then a mixed-gas company, and it is only in recent years that it turned to natural gas. Its first bond issue was put out in 1917, and that was sold to the public, and that has

been the highest grade natural-gas company in the United States, and the only gas company that ever had an Aaa bond on it.

Q. Mr. Brown, is it a fact that more than half of the money invested in the natural-gas industry has been contributed by affiliated companies or institutional investors?

A. I think that is a fair statement.

Q. And you advise institutional investors, don't you?

A. I certainly do, and I have sold lots of natural-gas bonds to banks and to insurance companies.

Q. And institutional investors are relatively well-informed on any prospective investment?

A. They are well informed.

Q. So your small private investor test is probably a minimum test, isn't it?

Mr. COCKLEY. I object. He just stated he didn't use the small private investor test, if I understood his testimony.

5911 The WITNESS. It is just the same thing selling a bond to a country bank as it is to an individual.

By Mr. SPRINGER:

Q. Well, you seem to convey the impression that the small private investor has a psychology, a complex about the natural-gas industry which isn't supported by the facts of millions of dollars invested by institutional and well-informed affiliate investors in the natural-gas industry. I just wanted to clear that up.

A. Well, I don't think you have cleared it up. Your affiliates are totally distinct from institutional investors. The institutional investors, generally speaking, include banks and insurance companies, and the larger banks and the insurance companies are pretty careful investors, and they buy, in general, only the senior securities. I know of only one common stock of a natural-gas company which is owned by an institution, and that is Harvard College.

The common shares have got to be sold to the public, so you have got to take the little investor, as you call it, into account if you are going to have an over-all picture of the cost of capital.

Now the natural gas industry never would have been built up to its present size had it not been for the foresight and courage of the larger affiliates, notably Standard Oil and Cities Service and Columbia Gas & Electric, and Pacific

5912 Lighting.

Q. And they realized a handsome profit, rate of profit, on what you call their courage?

A. They did through the years.

Q. You didn't mean to imply that the Standard Oil Company was the original promoter of the Hope Natural Gas Company, did you?

A. Well, no; not technically. There was a small group of men who started it, but the Standard Oil came into the picture through one of its subsidiaries, at a very early date, I think it was 1900.

Q. About the beginning of your second period, wasn't it?

A. Oh, no; long before that. You will find the National Transit was the largest stockholder either in 1900 or 1901. I can look it up.

Q. Well, there is information in the record on that.

A. Well, I have the Government record, the historical record, the corporate history.

Q. When you speak of the wasting asset characteristic of the natural gas industry, and compare it with a mining enterprise, do you recognize the distinction that is related to this factor, for example, that in the natural gas industry, exploration and development costs are contributed by the consumers
5913 through the rates, and the markets for the natural gas are essentially protected markets?

A. Why, certainly, but take the Cleveland Railway Company, they have substantially a guaranteed 10-cent fare, but that doesn't make the 6-percent dividend certain. For a number of years they haven't paid dividends. You can't guarantee a return to the stockholder by having a consumer pay for the exploration.

Q. In a mining enterprise, the investor contributes the money for additional exploration and development, isn't that so?

A. Indirectly he does, because it has got to be charged into operating expenses before arriving at the net available for dividends.

Q. Mr. Brown, are you aware of the new drilling methods and the advances in the transmission methods which have revolutionized the natural gas industry in recent years, so that it might be said that investment yardsticks which were applicable in times past are not applicable today?

Mr. Cockley. I object to that. There is no evidence of it; it is the first time I have heard of any revolution here. It certainly isn't in this record.

Trial Examiner. I believe he was just asking him if he was aware of the revolution.

The WITNESS. Well, I went over the property of the Hope Company in December of 1939, and watched them drill a few wells by the then latest methods. I haven't heard of
5914 any particular advances since then in inventions. Assuming the methods of today to be better than they were in 1900, I wouldn't say that it would change my opinion in the slightest. There has been an advance in methods of manufacture, and everything else during the past 40 years. At the same time, there has been a change in cost of construction during that period, due to high labor cost and cost of materials. When we finance a company, my firm, we always have an engineer's report on the value of the property made, and that is the general attitude of the public in buying new securities. We put that report into our prospectus, and that is the normal thing to do.

By Mr. SPRINGER:

Q. Do you rely on the estimates of gas reserves as religiously as you rely on the appraisal of the property by your engineers?

A. Well, I think that the estimated gas reserves are for an indefinite period of years. I haven't assumed that it is any short number of years. No; I don't rely on that as accurately as I do on bricks and mortar that are above ground, and I don't think anyone else does.

Mr. SPRINGER. That is all.

# TABLE OF EXHIBITS IN APPENDIX

## CORPORATE HISTORY AND JURISDICTION

| Ex. No. | Description | Witness | Pages printed | Pages omitted | Appendix page |
|---|---|---|---|---|---|
| 81 | Corporate history | F. P. C.: Nichols | 23–38 | 1–22 | 5 |
| 1-A | Map of main pipe-line systems of Hope Natural Gas Co., the East Ohio Gas Co., the Peoples Natural Gas Co., the River Gas Co. | Hope: Tonkin | 1 | | 33 |
| 40 | Stipulation that Hope Natural Gas Company is a natural gas company under the Natural Gas Act. | | 1 | | 19 |

## RATE BASE—PLANT COST, DEPLETION AND DEPRECIATION, WORKING CAPITAL

| | | | | | |
|---|---|---|---|---|---|
| 11 | Balance sheet, income account, analysis of profit and loss—Surplus year ended Dec. 31, 1938, comparative for years 1929 to 1938, inclusive. | Hope: Chisler | 10 | 1–9, 11–21 | 21 |
| 57 | Original cost of gas plant as at Dec. 31, 1938, vol. I. | F. P. C.: Smith | 1–12 | 13–22 | 25 |
| | | Baker | 23–28 | 29–60 | |
| | | Dunn | 61 | 62–64 | |
| | | Pace | | | |
| 58 | Federal Power Commission uniform system of accounts prescribed for natural gas companies (1940). | | 3–5, 31–32, 36–51. | 6–30, 33–35, 52–171. | 41 |
| 76 | Gas plant—Additions and retirements, depreciation, and depletion for the year ended Dec. 31, 1939. | F. P. C.: Dunn | 1–6, 18 | 7–17, 19 | 69 |
| 117 | Uniform classification of accounts for natural gas companies prescribed by the Public Service Commission of West Virginia (1923). | | 18 | 1–17, 19–144. | 77 |
| 98 | Principal property purchases, 1898–1938, and how these purchases were recorded in the company's plant accounts at the time of purchase. | Hope: Antonelli | 1–3 | | 79 |
| 73 | Comparison of reproduction cost new of line pipe, as of Dec. 31, 1938, included in Hope Natural Gas Company's Exhibit 16 D, with actual line-pipe costs prevailing during the year 1939. | F. P. C.: Bodrer | 4–9 | 1–3, 10–11 | 83 |

## RATE BASE—PLANT COST, DEPLETION AND DEPRECIATION, WORKING CAPITAL—Continued

| Ex. No. | Description | Witness | Pages printed | Pages omitted | Appendix page |
|---|---|---|---|---|---|
| 73-A | Comparison of unit reproduction cost new per foot for the installation (including all overheads) of line pipe used in "Reproduction Cost New of Company Properties As Of December 31, 1938," with actual average unit costs as experienced by Hope Natural Gas Company and another company during years 1937, 1938, 1939, and 1940. | F. P. C.: Bodner | 1-14 | 15-16 | 87 |
| 74 | Report on the "Original Cost" trended to 1938 prices of the plant of Hope Natural Gas Company existing at Dec. 31, 1938. | F. P. C.: Gough | 1-54 | i-v, Appendix, 55-78. | 97 |
| 74-A | Trend of original cost compared with indices of wholesale prices. | F. P. C.: Gough | 1 | | 131 |
| 43 | Estimated recoverable gas reserves and past production of the Hope Natural Gas Company as of Dec. 31, 1938, vol. I. | F. P. C.: Ross | 1-22 | i-iii, 23-48 | 133 |
| 81-A | Estimated recoverable gas reserves and past production of the Hope Natural Gas Company as of Dec. 31, 1939. | F. P. C.: Ross | 1 | 2-4 | 149 |
| 65 | Determination of composite service lives of the Hope Natural Gas Company property by primary accounts. | F. P. C.: French | 1-38 | | 151 |
| 81 | Depreciation and depletion of gas plant as at Dec. 31, 1938. | F. P. C.: Smith, Dunn | 1-12, 23, 25, 34-38. | 13-22, 24, 26-33, 39-40 | 175 |
| 89 | Estimated cost of abandoning | F. P. C.: Dunn | 1 | | 203 |
| 124 | Comparison of company's and F. P. C. examiners' claims as to costs of production, transmission, and general plant as of Dec. 31, 1938. | Hope: Sullivan | 1-2 | | 204 |
| 142 | Comparison of depreciation and return resulting from Rhodes and French depreciation rates. | F. P. C.: Dunn | 1-2 | | 207 |
| 118 | Estimated capital expenditures for production system, transmission system, and general plant during the years 1941 to 1943, inclusive. | Hope: Tonkin | 1 | 2-4 | 210 |
| 62 | Working capital | F. P. C.: Nichols | 1-18 | 19-26 | 211 |

## OPERATING REVENUES AND EXPENSES

| | | | | | |
|---|---|---|---|---|---|
| 67 | Comparative income statements for the years 1937, 1938, and 1939, vol. I. | F. P. C.: Nichols, Reinhard. | 1-21 | 22-44 | 224 |
| 67-A | Comparative income statements for the years 1937, 1938, and 1939, vol. II | F. P. C.: Nichols, Reinhard. | 24-56 | 1-23, 57-74 | 258 |

## OPERATING REVENUES AND EXPENSES—Continued

| Ex. No. | Description | Witness | Pages printed | Pages omitted | Appendix page |
|---|---|---|---|---|---|
| 78 | Operations data for the year ended Dec. 31, 1940. | F. P. C.: Dunn | 1–55 | | 287 |
| 83–A | Allocation of cost of service, year 1940, of the Hope Natural Gas Company. | F. P. C.: Lyon | 1–5 | 6–13 | 344 |
| 90 | Rate of return earned on original cost base, years 1937 to 1940, inclusive. | F. P. C.: Dunn | 1–10 | | 349 |
| 92 | Comparative income statement for the 3 months ended Mar. 31, 1941 and 1940. | F. P. C.: Dunn | 1–4 | | 361 |
| 107 | Statement showing increases in pay roll during years 1940 and 1941 not reflected in operating expenses. | Hope: Chisler | 1 | | 366 |
| 111 | Property reclassification and F. P. C. rate investigation expense. | Hope: Chisler | 1 | | 367 |
| 66 | Determination of composite service lives of gasoline and butane property of the Hope Construction and Refining Company. | F. P. C.: Soyster | 1–9 | 1–iv | 368 |

23 **EXHIBIT NO. 81.—CORPORATE HISTORY, F. P. C. WITNESS NICHOLS**

[Pages 1 to 22 omitted]

## WRITTEN STATEMENT

On June 14, 1938 the directors approved an amendment to the Employees' Thrift Plan.

On December 28, 1938 the directors approved the purchase from Standard Oil Company (New Jersey) of 19,999 shares of stock of Reserve Gas Company at a price of $1,810,000.

On February 21, 1939 H. C. Cooper resigned as President and Director and L. L. Tonkin was elected to fill these vacancies. H. R. Livingston was elected to fill a vacancy in the Board of Directors. The resignation of H. B. Schum as Assistant Treasurer was accepted and J. C. Cross was appointed to that office.

On July 10, 1939 the directors approved a further amendment to the Employees' Thrift Plan.

On July 11, 1939 the directors authorized an exchange of property between Hope Natural Gas Company, Hope Construction and Refining Company, Pittsburgh and West Virginia Gas Company, and Philadelphia Oil Company.

On September 5, 1939 the directors authorized and approved the cancellation of a large number of gas leaseholds, the list spread in the minutes occupying approximately 37 typed pages. An adjustment to rates of depreciation applied to certain classes of property was approved, effective January 1, 1938.

On December 8, 1939 the directors approved and adopted an Agreement of Consolidation or Merger dated December 8, 1939,
24 between Hope National Gas Company and Reserve Gas Company and a special meeting of stockholders was called on December 8, 1939 to act on the agreement. After several adjournments the approval of the Public Service Commission of West Virginia was received on December 29, 1939, and the merger was consummated.

At a meeting of the directors on March 6, 1940 it was stated that the principal place of business of the company should be changed from Pittsburgh, Pa., to Clarksburg, W. Va., and a special meeting of stockholders was called for March 18, 1940, at which

meeting the stockholders passed a resolution authorizing the necessary amendments to the certificate of incorporation and by-laws.

On March 15, 1940 the treasurer of the company was authorized to sell $4,000,000 principal amount of United States Treasury Bills and purchase a like face amount of other government securities upon the best terms obtainable with the funds realized from the sale.

On May 21, 1940 the treasurer was authorized to purchase $2,500,000 face amount of 2½% United States Treasury Bonds due December 15, 1945, at the best price obtainable.

On September 30, 1940 resolutions were adopted pertaining to employees who are called in the future for compulsory military training.

On November 7, 1940 additional company contributions to the Employee's Thrift Plan were authorized, each participating employee's account to be credited with $25.00 plus 15¢ for each dollar of such employee and company regular contributions made on his behalf.

On the same date, the directors authorized the cancellation of 235 leases, owing to the fact that it was no longer considered profitable to hold them.

On December 23, 1940 a dividend of $10 per share was declared out of earnings on the outstanding capital stock, payable forthwith.

On December 26, 1940 participation in the group life plans of Standard Oil Company (New Jersey) adopted by the Hope Company in 1931, 1934, and 1938, were terminated as of December 31, 1940, and a new plan was adopted effective January 1, 1941 in accordance with a contract negotiated by Standard Oil Company (New Jersey) with Equitable Life Assurance Society.

On the same date the effective benefit plan was terminated as of December 31, 1940 and a new disability and death benefit plan was made effective as of January 1, 1941.

The latest stockholders meeting of which the minutes were examined was held on June 11, 1940. The directors elected at that meeting were: L. L. Tonkin, J. C. Chisler, S. E. W. Burnside, C. C. Reed, H. R. Livingston.

On the same date the following officers were elected by the above board of directors:

Officers:
President and Manager, L. L. Tonkin.
Vice President, J. C. Chisler.
Secretary, S. E. W. Burnside.
Treasurer, J. C. Chisler.
Assistant Secretary, Denton Borger.
Assistant Secretary, John W. Schott.
Assistant Treasurer, H. R. Livingston.
Assistant Treasurer, J. C. Cross.
General Superintendent, C. C. Reed.
Assistant Superintendent, John A. Clark.

The minutes of the directors' meetings to and including February 18, 1941, have been examined and no changes in the above directors and officers have been recorded.

As of December 31, 1940, the authorized capital stock of the company was $35,000,000, divided into 350,000 shares of common stock having a par value of $100 per share.

The outstanding capital stock as of the above date was 279,693 shares, having an aggregate par value of $27,969,300, of which $11,000,000 was issued in the form of stock dividends.

A summary of the various changes in the authorized and issued capital stock is as follows:

| Date | Capital stock authorized | Issued | | Total outstanding |
|---|---|---|---|---|
| | | For cash or other assets | Stock dividends | |
| Sept. 14, 1898 | $500,000 | $200,000 | | $200,000 |
| Dec. 16, 1898 | 500,000 | 300,000 | | 500,000 |
| March 21, 1908 | 15,000,000 | 4,500,000 | $5,000,000 | 10,000,000 |
| Dec. 31, 1908 | 15,000,000 | 25,000 | | 10,025,000 |
| April 10, 1909 | 15,000,000 | 75,000 | | 10,100,000 |
| April 22, 1910 | 15,000,000 | 600,000 | | 10,700,000 |
| Sept. 6, 1910 | 15,000,000 | 1,800,000 | | 12,500,000 |
| March 2, 1911 | 15,000,000 | 500,000 | | 13,000,000 |
| Aug. 25, 1911 | 15,000,000 | 1,250,000 | | 14,250,000 |
| Dec. 9, 1912 | 20,000,000 | | | 14,250,000 |
| Dec. 30, 1912 | 20,000,000 | 2,750,000 | | 17,000,000 |
| 27 Jan. 24, 1913 | 20,000,000 | 2,000,000 | | 19,000,000 |
| Feb. 28, 1914 | 20,000,000 | | $1,000,000 | 20,000,000 |
| Aug. 25, 1916 | 50,000,000 | | | 20,000,000 |
| June 26, 1922 | 35,000,000 | | | 20,000,000 |
| Dec. 21, 1922 | 35,000,000 | | 5,000,000 | 25,000,000 |
| Mar. 19, 1926 | 35,000,000 | 1,600,000 | | 26,600,000 |
| June 11, 1929 | 35,000,000 | [1] 1,369,300 | | 27,969,300 |

[1] Issued in exchange for property and assets of Clarksburg Light & Heat Company.

27

The first dividend declared by the company was 50,000 shares of capital stock of a par value of $100 per share, or an aggregate sum of $5,000,000. This was declared at a meeting of the Board of Directors on May 15, 1908, and represented 10 shares of stock for each share presently held. At the same time, Standard Oil Company (New Jersey) purchased 45,000 shares of capital stock for $4,500,000 in cash, at par.

As a result of this sale of stock and the declaration of the stock dividend, the outstanding capital stock was increased from $500,000 to $10,000,000.

Later in the year 1908 (October 21) the first cash dividend of the company was declared in the amount of $1,000,000 or 10% of the outstanding capital stock.

During each of the calendar years from 1908 to 1940, inclusive, (except the year 1919) cash dividends in substantial amounts were paid. These ranged from $600,000 paid during the year 1918, which was 3% of the outstanding capital stock as of that date, to $10,520,000 paid in the year 1920, which was 52.6% of the outstanding capital stock as of December 31 of that year; but was over 75% of the capital stock that had been issued up to that time directly for cash or other assets.

28

Cash dividends paid during the latest three years of operations, namely 1938, 1939, and 1940 were 10% of the outstanding stock, and during the 33-year period above-mentioned, there were but eight years that the cash dividend rate was less than 10%. These were as follows:

| | Percent | | Percent |
|---|---|---|---|
| 1911 | 9 | 1919 | 0 |
| 1913 | 7 | 1932 | 5 |
| 1914 | 6 | 1933 | 3 |
| 1918 | 3 | 1937 | 7 |

The annual average cash dividends from 1908 to 1940, inclusive, was $2,947,686 which is 12.8% of the annual average outstanding capital stock during that period.

Stock dividends in the aggregate amount of $11,000,000 have been paid as follows:

| | |
|---|---|
| 1908 | $5,000,000 |
| 1914 | 1,000,000 |
| 1922 | 5,000,000 |

As of December 31, 1940, Standard Oil Company (New Jersey) owned all of the outstanding capital stock of the company (except qualifying shares).

Schedule No. 1 is a summary by years, from the inception of the company to December 31, 1940, of the invested capital, the net surplus credits and the ratio of the annual net surplus credits to the average annual invested capital.[1]

The amounts shown in column (e) "Average Investment During Year" is the simple average of the sum of the outstanding capital stock and the earned surplus at the beginning and end of each year. The ratio or percent of net surplus credit to the average investment as shown in column (m) is the result of dividing the annual net surplus credits as shown in column (i) by the average invested capital as shown in column (e).

The average annual amount of invested capital over the entire period from 1899 (the first year of operations of the company) to 1940, inclusive, was $23,198,278. The average annual net earnings plus or minus surplus adjustments amounted to $2,772,739.77, or 11.95% of the average annual invested capital.

The above stated amounts and percentages are based on unadjusted book figures. The result of the examiners' study of depreciation and depletion expenses, etc., shows a net credit to surplus of $16,264,918 as of December 31, 1938, as presented in the various reports in connection with the examination of the records. Application of the aggregate amount of these adjustments to the invested capital and to the total earnings of the company results in the following:

| | |
|---|---|
| Average annual capital and surplus | [1] $23,585,537 |
| Average annual net earnings (including surplus adjustments) | [1] 3,159,470 |
| Average rate of earnings to average invested capital—percent | 13.4 |

[1] Subject to slight adjustment for depreciation, depletion, etc., for 1939 and 1940.

Certain exceptional items appear in Schedule No. 1, particularly in columns (g) and (h), which are surplus credits and debits, respectively. A summary of some of the larger of these items is as follows:

Surplus credits:

Year

1908—Includes adjustment of depreciation charges in prior years to restore $1,651,600.82.

1916—Includes enhanced value of leases sold to United Fuel Gas Company in 1910, $462,332.35.

1921—Includes depreciation restored on property retired in 1920, $524,880.79 and adjustment of 1920 Federal income tax in the amount of $106,637.34.

[1] Invested capital as herein used, means the total outstanding capital stock, plus the unappropriated earned surplus.

Surplus credits:

Year

1925—Includes adjustment of overaccrued and overpaid Federal income tax and interest in the following amounts: 1924, $223,884.67; 1909 to 1918, $168,446.39.

1927—Includes adjustment of Federal income tax for years 1917, 1918, and 1919 (consolidated with Standard Oil Company (New Jersey)), set up in 1923 in the amount of $1,400,000, reduced to $400,000.

1929—Adjustment of amortization of leaseholds from January 1, 1921, to October 31, 1929, in the amount of $545,681.41.

1934—Includes the restoration of depreciation and depletion accruals, years 1927 to 1933, inclusive, in the amount of $5,901,317.53, and transfer of losses on property retired from surplus to reserves, for the years 1927 to 1933, inclusive, in the amount of $491,579.45.

31 Surplus debits:

Year

1916—Includes $210,509.82 closing depreciation and adjustment account, gas investment.

1919—Losses on property abandoned and dismantled, Hastings coal mine, $127,680.79; Intangibles in Wright Producer construction, $314,635.93.

1923—Additional taxes accrued, years 1917, 1918, and 1919, $1,400,000 ($1,000,000 of this amount was reversed in 1927, see surplus credits).

1926—Includes:

Judgment and interest in favor of Ideal Gasoline Company re gasoline extraction plant, $227,336.49.

Disposition of Parkersburg warehouse and shop equipment, $161,393.99.

Amount transferred to reserve for annuities, $100,000.00.

1930—Setting up supplemental reserve for annuities, $530,080.00.

1931—Amount transferred to reserve for annuities, $2,242,234.38.

Dividends:

Year

1920—Includes the payment of $4,520,000 to stockholders, being amount realized from sale of gasoline extraction plants.

1935—Includes distribution of $88,194.59 in stock of other companies.

Schedule No. 2 is a statement of capital stock outstanding by years from the inception of the company (1898) to 1940, the amount of dividends paid during the same period and the various dividend rates as related to the par value of the outstanding stock.

The annual outstanding stock is separated into two categories, namely, the amount issued in the form of stock dividends and the amount issued for cash or other assets. At December 31, 1940, the former amounted to $11,000,000 and the latter $16,969,300, making a total of $27,969,300.

32 The annual dividends shown in the schedule are also separated into two categories, segregating the stock dividends from those paid in cash.

It will be noted that the total amount of dividends paid during the entire existence of the company was $108,273,640, of which $11,000,000 was in the nature of capital stock of Hope Natural Gas Company. The balance of $97,273,640 was paid in cash (excepting $88,194.59, which was represented by stocks of other companies).

For purposes of comparison, the dividend rates are shown in the schedule calculated on two bases. Column (h) shows the annual rates of all dividends to the total outstanding stock and column (i) shows the annual rates of cash dividends to the par value of the capital stock that was issued for cash or other assets.

At the foot of Schedule No. 2, annual averages from the inception of the company are shown for: (a) par value of capital stock issued for cash or other assets; (b) annual cash dividends; and (c) annual yield on the average annual outstanding capital stock that was issued for cash or other assets. The average annual yield on this basis is 20.4%.

Further data, not shown in Schedule No. 2, but derived therefrom, are as follows:

| | |
|---|---|
| 33 Average annual total capital stock outstanding | $18,161,467. |
| Average annual dividends (all classes) | 2,577,944. |
| Average rate of dividends to total capital stock | 14.19%. |

All averages shown in Schedule No. 2 and in the above table are based on the 42-year period from January 1, 1899 (the first year of operations) to December 31, 1940.

Schedule No. 3 is a summary of the Balance Sheet accounts per books, unadjusted as of December 31 of each year from the inception of the company (1898) to 1940.

A separate report has been prepared by the accounting staff on the balance sheet accounts as of December 31, 1938. Further details concerning the balance sheet accounts are shown in that report which is identified as another exhibit in the present proceeding.

Schedule No. 4 is a summary of the income accounts and surplus adjustments per books, unadjusted, from the inception of the company to December 31, 1940. This schedule shows by years the gross revenues, the revenue deductions, the surplus adjustments, dividends paid, and the surplus balance at the end of each year.

Further details relating to the income accounts for the
34 years ended December 31, 1937, 1938, and 1939, and the examiners' adjustments as applied thereto are presented in a separate exhibit in this proceeding.

[1] Prior to 1934, certain reserves, such as uncollectible accounts, etc., are netted against the corresponding asset account.

[2] Long term advances, etc., 1902 to 1907, inclusive, represent advances from associated company, liquidated by issuance of capital stock; 1934 to 1936, inclusive, represent notes issued for purchase of property, etc.

*Italic figures* denote deficit.

## EXHIBIT NO. 40.—STIPULATION THAT HOPE NATURAL GAS COMPANY IS A NATURAL GAS COMPANY UNDER THE NATURAL GAS ACT

### STIPULATION

It is stipulated by counsel for the Hope Natural Gas Company and counsel for the Federal Power Commission that the Hope Natural Gas Company is a natural-gas company within the meaning of section 2 (6) of the Natural Gas Act, which provides: "'Natural-gas company' means a person engaged in the transportation of natural gas in interstate commerce, or the sale in interstate commerce of such gas for resale."

/s/ WILLIAM B. COCKLEY,
*Counsel for Hope Natural Gas Company.*
/s/ RICHARD J. CONNOR,
/s/ MILFORD SPRINGER,
*Counsel for Federal Power Commission.*

Date: March 3, 1941.
Approved:

/s/ SPENCER W. REEDER,
*Counsel for Cleveland.*
/s/ SAMUEL G. MILLER,
*Counsel for Pennsylvania Public Utility Commission.*

1 **EXHIBIT NO. 57.—ORIGINAL COST OF GAS PLANT AS AT DEC. 31, 1938, VOLUME I, F. P. C. WITNESSES SMITH, BAKER, DUNN, AND PACE**

## WRITTEN STATEMENT

The Federal Power Commission, under date of October 14, 1938, issued an order of investigation into and concerning all rates, charges, classifications, rules, regulations, practices, or contracts of Hope Natural Gas Company. In accordance therewith, an examination of the accounts and records of Hope Natural Gas Company has been made, and, as a result, this report on the original cost of the Gas Plant of the Company is submitted.

This report is in two parts. Volume I sets forth the investment of Hope Natural Gas Company in Gas Plant per Company books and as adjusted, as of December 31, 1938. The adjusted figures show the original cost as defined in the Federal Power Commission's Uniform System of Accounts for Natural Gas Companies of the gas plant. Volume II contains a detailed explanation of the staff adjustments.

On January 1, 1939, there became effective and applicable to the Company a new Uniform System of Accounts for Gas Utilities prescribed by the Public Service Commission of West Virginia. In July 1938 the Company began an investigation and study of its records for the purpose of stating in its Gas Plant Accounts the cost of its properties and to reflect the amount of such cost in each primary account as prescribed by said Commission.

2 The results of this investigation and study made by the Company, were made available to the accountants of the Federal Power Commission during May 1940. An inventory of the existing property at December 31, 1938, was made by the Company and priced at what the Company claims was original cost. The results of this inventory, among other things, necessitated numerous reclassifications of costs, adjustment of prior distribution of certain costs and correction of certain accounting errors, all of which have been examined by the Commission's staff of accountants.

There is presented immediately hereinafter a condensed balance sheet of the Company as reflected by the books of account at December 31, 1938, before any adjustments, in order to set forth the capitalized cost of Gas Plant per books on that date:

3 ASSETS

| | Amount |
|---|---|
| Gas plant: | |
| Gas plant in service | $56,101,875.49 |
| Construction work in progress | 81,392.75 |
| Gas plant adjustment | 94,814.75 |
| Coal property | 341,529.68 |
| Franchises, patent rights, and other intangibles | 30,185.91 |
| Total gas plant | $56,649,798.58 |
| Investment and fund accounts | 3,796,362.25 |
| Current and accrued assets | 15,460,687.85 |
| Deferred debits | 5,002.28 |
| Total assets and other debits | $75,911,850.96 |

LIABILITIES

| | |
|---|---|
| Capital stock | $27,969,300.00 |
| Current and accrued liabilities | 1,971,351.32 |
| Deferred credits | 3,167.89 |
| Contributions in aid of construction | 540.87 |
| Reserves: | |
| Depreciation and depletion—Utility plant | 40,759,450.48 |
| Other | 13,982.63 |
| Surplus—Earned | 5,194,107.77 |
| Total liabilities and other credits | $75,911,850.96 |

4 As shown on the preceding balance sheet, the Capitalized Cost of Gas Plant as of December 31, 1938, was $56,649,798.58, of which $56,101,875.49 represented Gas Plant in Service, summarized by functions as follows:

| | |
|---|---|
| Production plant | $26,460,050.10 |
| Transmission plant | 25,253,484.00 |
| Distribution plant | 2,795,083.04 |
| General plant | 1,593,258.35 |
| Total | 56,101,875.49 |

This report deals with the cost of the production plant, transmission plant, and general plant although a cursory examination was made of the distribution plant. The following summary sets forth the cost per Company books, reclassified by the Company as

shown by Schedule I, Page 10, of this report, and as adjusted by the examiners:

| Particulars | Cost per books | Examiners' adjustments | As adjusted |
|---|---|---|---|
| Production plant | $26,718,065.06 | *$184,673.83* | $26,333,391.23 |
| Transmission plant | 25,279,965.69 | *1,414,567.34* | 23,865,398.35 |
| General plant | 1,308,761.70 | *299,930.64* | 1,008,831.06 |
| Total | 53,306,792.45 | *2,099,171.81* | 51,207,620.64 |

Italic figures denote decrease.

Schedule I of this report sets forth the total cost of Gas Plant in Service per Company books, Company's reclassification adjustments, Examiners' (F. P. C. staff) adjustments and the resulting adjusted balances, representing original cost as defined in the Commission's System of Accounts.

This schedule has been constructed to show separately the total cost of the production plant, transmission plant, and general plant, representing the cost dealt with in this report. The total cost per books, in this respect, of $53,306,792.45, corresponds with that shown by Exhibit 20, page 32, column 4.

Attention is called to the total examiners' adjustments of $2,099,171.81, representing a credit to the total capitalized cost of Gas Plant in Service, exclusive of distribution plant. This amount represents the net adjustment made by the examiners and is arrived at by the difference between credit adjustments, amounting to $5,883,085.12 and debit adjustments of $3,783,913.31, and is summarized by classes as follows:

| *Description* | *Amount* |
|---|---|
| Company adjustments per Exhibit 20 | *$1,804,383.48* |
| Company adjustments—Prior utility acquisitions | *232,930.69* |
| Correction of accounting errors | 1,480,227.70 |
| Transfers to accounts other than gas plant in service | *1,542,085.34* |
| Examiners' adjustment—Net credit | *2,099,171.81* |

Schedule 1-A sets forth all adjustments by sources, showing contra accounts involved. It also identifies the adjusting journal entries which are given in Volume II.

The total original cost of Gas Plant in Service, exclusive of distribution plant, at December 31, 1938, is summarized in the following tabulation which shows separately acquisitions of properties classed as operating units or systems.

| | | |
|---|---|---|
| Company constructed and purchased from nonutilities: | | |
| Cost per books | $50,088,393.17 | |
| Adjustments | *1,866,241.12* | |
| As adjusted | | $48,222,152.05 |
| 6 Acquisitions of prior utilities: | | |
| Cost per books | $3,218,399.28 | |
| Adjustments | *232,930.69* | |
| As adjusted | | $2,985,468.59 |
| Total as adjusted—Dec. 31, 1938 | | 51,207,620.64 |

The above tabulation has been made to focus attention on properties acquired from prior utilities. As shown above and also by Exhibit 20, page 32, column 12, the cost capitalized per Company books for this class of acquisitions is $3,218,399.28. By repricing these same properties, the Company arrives at a cost of $4,639,010.78, as shown by Exhibit 20, page 32, column 13. This repricing would result in an increase in cost recorded in plant accounts of $1,420,611.50. The Company adjustments or repricing are not concurred in. The only adjustment to this class of property approved by the examiners are shown in the above tabulation ($232,930.69). They represent Company adjustments to reclassify capitalized cost and correct accounting errors.

An analysis of approximately ninety percent of such acquisitions and a careful examination of all vouchers, books and data available, together with consideration of each individual acquisition, lead to the conclusion there is no justification for any adjustments whereby the amounts now recorded in plant accounts would be increased. It is the opinion of the examiners that the amount recorded at the time of acquisition represent the original cost as near as can be determined.

7 The total proposed adjustment to this class of property, developed by the original cost study made by the Company, included a credit of $967,151.87, classified as follows:

| | |
|---|---|
| Credit plant accounts—Accrued depreciation | *$746,851.51* |
| Estimated costs of obtaining | 10,917.50 |
| Estimated costs of construction | 1,712.83 |
| Correction of accounting errors | *232,930.69* |
| Total | *967,151.87* |

Of the above proposed adjustments, the examiners have approved only the correction of accounting errors representing a credit to Capitalized Cost of $232,930.69.

Schedules 2 to 33, inclusive, set forth the investment in gas plant, exclusive of distribution plant, by accounts, showing the cost per books, staff adjustments, and the adjusted or original cost balances. These schedules are the result of a detailed examination made by the Commission's staff of accounts of the books, records, and documents of the Company, including the Company's Original Cost study. The adjustments include the reclassification of items shown in Schedule 1.

Schedule No. 34 is a summary of amounts transferred to Account 100.4, Gas Plant Held for Future Use, of the Commission's Uniform System of Accounts.

Schedule No. 35 is a statement of Account 107, Gas Plant Adjustments, showing the source of data and manner of determining amounts by the Company.

Schedule No. 36 is a statement of Investment in Coal Property. This investment was included in Gas Plant as of December 31, 1938, by the Company, although not included as a part of the
8 original cost claimed per Exhibit 20. No adjusting entry has been proposed by the Company to transfer this cost to other accounts. This item has been eliminated from Gas Plant by the examiners and transferred to Account 110, Other Physical Property, by Balance Sheet Journal Entry No. 100.

Schedule No. 37 is a summary of an account designated by the Company as "Franchises, Patent Rights, and Other Intangibles" and was included in Gas Plant as of December 31, 1938. An analysis of this account discloses that it consists of three items as follows:

| | |
|---|---|
| Patent rights: | |
| Thermo-syphon system for gasoline absorption plant | $458.66 |
| Contracts and franchises: | |
| Acquired in acquisition of Clarksburg Light and Heat Co. | 5,811.64 |
| Contract for gas: | |
| Hamilton Gas Corporation | 23,915.61 |
| Total | 30,185.91 |

The first two items shown above have been eliminated from Gas Plant by the Examiners and charged to Surplus by Balance Sheet Journal Entry No. 101.

The third item has also been eliminated from Gas Plant and transferred to Account 146, Other Deferred Debits, by Balance Sheet Journal Entry No. 101.

9 Volume II of this report, as stated hereinbefore, deals with adjustments made by the examiners and includes a summary of all adjustments, together with adjusting journal entries and a detailed explanation of each.

61 Docket G-113 Schedule No. 35

HOPE NATURAL GAS COMPANY

*Account 107—Gas plant adjustments*

*Details of account as at Dec. 31, 1938*

| Description | Amount |
|---|---|
| (a) | (b) |
| Clarksburg Light & Heat Co. Property Appreciation | $94,814.75 |

Details of this amount shown as per letter below:

MAY 17, 1940.

Mr. J. A. HENNIG,
*Examiner-In-Charge,*
*Federal Power Commission,*
*Clarksburg, W. Va.*

DEAR MR. HENNIG: Referring to your letter to me of April 25, 1940, requesting an explanation of the Property Appreciation Account (Clarksburg Light and Heat Company) and how the amount of $94,814.75 was determined, please be advised as follows:

In 1929 the company purchased the Physical Properties of the Clarksburg Light and Heat Company for 13,693 shares of Hope Natural Gas Company stock and $10.67 in cash. This was treated as receipt by the Clarksburg Company of $1,464,114.75, which amount was $94,814.75 above the net book cost of these properties as shown on the Clarksburg Company's books. The Hope Company reflected these properties and the book depreciation thereon on its books at the same amounts as they appeared on the Clarksburg Company's books and charged $94,814.75 to "Property Appreciation Account (Clarksburg Light and Heat Company)" by the voucher to which you referred.

Very truly yours,

(s) GEO. N. REED.

[Pages 62 to 64 omitted.]

## EXHIBIT NO. 58.—FEDERAL POWER COMMISSION UNIFORM SYSTEM OF ACCOUNTS PRESCRIBED FOR NATURAL GAS COMPANIES (1940)

### DEFINITIONS

[Pages 1 to 2 omitted]

When used in this system of accounts:

1. "Accounts" means the accounts prescribed in this system of accounts.

2. "Actually issued," as applied to securities issued or assumed by the utility, means those which have been sold to bona-fide purchasers for a valuable consideration (including those issued in exchange for other securities or other property); also securities issued as dividends on stock, and those which have been issued in accordance with contractual requirements direct to trustees of sinking funds.

3. "Actually outstanding", as applied to securities issued or assumed by the utility, means those which have been actually issued and are neither retired nor held by or for the utility; provided, however, that securities held by trustees shall be considered as actually outstanding.

4. "Amortization" means the gradual extinguishment of an amount in an account by prorating such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized.

5. A. "Associated companies" means companies or persons that, directly or indirectly, through one or more intermediaries, control, or are controlled by, or are under common control with, the accounting company.

B. "Control" (including the terms "controlling", "controlled by", and "under common control with") means the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of a company, whether such power is exercised through one or more intermediary companies, or alone, or in conjunction with, or pursuant to an agreement, and whether

such power is established through a majority or minority ownership or voting of securities, common directors, officers, or stockholders, voting trusts, holding trusts, associated companies, contract, or any other direct or indirect means.

6. "Book cost" means the amount at which property is recorded in these accounts without deduction of related reserves or other accounts. As applied to gas plant, "book cost" means the amount at which property is included in account 100.6 or in accounts 100.1 to 100.4.

7. "Buildings." (See Gas plant instruction 10.)

8. "Commission" means the Federal Power Commission.

9. "Construction cost, components of." (See Gas plant instruction 5.)

10. "Cost" means the amount of money actually paid for property or services or the cash value at the time of the transaction of any consideration other than money. (See, however, Gas plant instruction 3.)

11. "Cost of removal" means the cost of demolishing, dismantling, tearing down, or otherwise removing gas plant, including the cost of transportation and handling incidental thereto.

4 12. "Debt expense" means all expenses in connection with the issuance and initial sale of evidences of debt, such as fees for drafting mortgages and trust deeds; fees and taxes for issuing or recording evidences of debt; cost of engraving and printing bonds and certificates of indebtedness; fees paid trustees; specific costs of obtaining governmental authority; fees for legal services; fees and commissions paid underwriters, brokers, and salesmen for marketing such evidences of debt; fees and expenses of listing on exchanges; and other like costs.

13. "Depletion," as applied to natural gas producing land and land rights, means the loss in service value incurred in connection with the exhaustion of the natural resource in the course of service.

14. "Depreciation," as applied to depreciable gas plant, means the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand and

requirements of public authorities, and, in the case of natural gas companies, the exhaustion of natural resources.

15. "Discount," as applied to the securities issued or assumed by the utility, means the excess of the par (stated value of no par stocks) or face value of the securities plus interest or dividends accrued at the date of the sale over the cash value of the consideration received from their sale.

16. "Distribution system." (See Gas plant instruction 16.)

17. "Equipment." (See Gas plant instruction 11.)

18. "Improvements." (See Gas plant instruction 10.)

19. "Investment advances" means advances, represented by notes or by book accounts only, with respect to which it is mutually agreed or intended between the creditor and debtor that they shall be settled by the issuance of capital stock or long-term obligations, or shall not be subject to current settlement.

20. "Land and land rights." (See Gas plant instruction 9.)

21. "Minor items of property" means the associated parts or items of which units of property are composed.

22. "Natural gas" means either natural gas unmixed, or any mixture of natural and artificial gas.

23. "Natural gas company" means a person engaged in the transportation of natural gas in interstate commerce, or the sale in interstate commerce of such gas for resale.

24. "Net book cost," when applied to gas plant means the book cost less related depreciation, amortization, and depletion reserves. When applied to other property, it means book cost less related reserves for loss in value.

25. "Net original cost," as applied to gas plant, means the original cost less related depreciation, amortization, and depletion reserves.

26. "Net salvage value" means the salvage value of property retired less the cost of removal.

27. "Nominally issued," as applied to securities issued or assumed by the utility, means those which have been signed, certified, or otherwise executed, and placed with the proper officer for sale and delivery, or pledged, or otherwise placed in some special fund of the utility, but which have not been sold or issued direct to trustees of sinking funds in accordance with contractual requirements.

28. "Nominally outstanding," as applied to securities issued or assumed by the utility, means those which, after being actually issued have been reacquired by or for the utility under circum-

stances which require them to be considered as held alive and not retired; provided, however, that securities held by trustees shall be considered as actually outstanding.

29. "Original cost," as applied to gas plant, means the cost of such property to the person first devoting it to public service.

30. "Person" means an individual, a corporation, a partnership, an association, a joint-stock company, a business trust, or any organized group of persons, whether incorporated or not, or any receiver or trustee.

31. "Premium," as applied to the securities issued or assumed by the utility, means the excess of the cash value of the consideration received from their sale over the sum of their par (stated value of no par stocks) or face value and interest or dividends accrued at the date of sale.

32. "Property retired," as applied to gas plant, means property which has been removed, sold, abandoned, destroyed, or which for any cause has been withdrawn from gas service.

33. "Replacing" or "replacement," when not otherwise indicated in the context, means the construction or installation of gas plant in place of property retired, together with the removal of the property retired.

34. "Salvage value" means the amount received for property retired, less any expenses incurred in connection with the sale or in preparing the property for sale, or, if retained, the amount at which the material recoverable is chargeable to Account 131, Materials and Supplies, or other appropriate account.

35. "Service value" means the difference between original cost and the net salvage value of gas plant.

36. "Structures." (See Gas plant instruction 10.)

37. "Transmission system." (See Gas plant instruction 16.)

38. "Retirement units" means those items of gas plant which, when retired, with or without replacements, are accounted for by crediting the book cost thereof to the gas plant account in which included.

39. "Utility," as used herein and when not otherwise indicated in the context, means any natural gas company to which this system of accounts is applicable.

[Pages 6 to 30 omitted.]

## XI. Reserves

### 250.1 Reserve for Depreciation of Gas Plant

A. This account shall be credited with the following:

Amounts charged to Account 503.1, Depreciation, to Account 508, ncome from Gas Plant Leased to Others, to clearing accounts, or o income or other accounts for currently accruing depreciation.

Amounts charged to Account 414, Miscellaneous Debits to Sur-lus, for past accrued depreciation.

Amounts of depreciation applicable to gas properties acquired as perating units or systems. (See Gas plant instruction 4.)

Amounts chargeable upon approval of the Commission to ccount 141, Extraordinary Property Losses.

Amounts of depreciation applicable to gas plant donated to the tility.

B. At the time of retirement of depreciable gas plant in service, his account shall be charged with the book cost of the property etired and the cost of removal, and shall be credited with the alvage value and any other amounts recovered, such as insurance.

C. For balance sheet purposes, this account shall be regarded nd treated as a single composite reserve. For purposes of analysis, owever, each utility shall maintain records in which the depre-iation reserve shall be segregated according to the following funé-ional classification of gas plant: (1) Production—manufactured as, (2) production—natural gas, (3) storage, (4) transmission, 5) distribution, and (6) general. The credits and debits to the eserve shall be so made as to show separately (1) the amount of he accrual for depreciation, (2) the book cost of property retired, 3) cost of removal, (4) salvage, and (5) other items, including ecoveries from insurance.

D. When transfers of property are made from one utility plant ccount to another or from or to nonutility property, the account-ng shall be as provided in Gas plant instruction 14.

E. This account shall be subdivided as follows:

250.11 Reserve for Depreciation of Gas Plant in Service.
250.12 Reserve for Depreciation of Gas Plant Leased to Others.
250.13. Reserve for Depreciation of Gas Plant Held for Future Use.

Note.—The utility is restricted in its use of the reserve to the purposes set rth above. It shall not divert any portion of the reserve to surplus or make ny other use thereof without the approval of the Commission.

32 250.2 RESERVE FOR AMORTIZATION AND DEPLETION OF PRODUCING NATURAL GAS LAND AND LAND RIGHTS

A. This account shall be credited with amounts charged to Account 503.2, Amortization and Depletion of Producing Natural Gas Land and Land Rights, or Account 508, Income from Gas Plant Leased to Others, to provide for the current amortization and depletion of land and land rights from which natural gas is obtained. (See Gas plant instruction 9–I.)

B. This account shall also be credited with such amounts as are necessary to reflect, as of the effective date of this system of accounts, the portion of the cost of land and land rights which have been exhausted through the extraction of natural gas. To the extent that provision has not previously been made for amortization and depletion of such land and land rights, amounts credited to this reserve shall be concurrently debited to Account 414, Miscellaneous Debits to Surplus.

C. When natural gas-producing land or land rights are sold, relinquished, or otherwise retired from service, the book cost of the land or land rights so retired, less any proceeds realized at retirement, shall be charged to this account; provided, however, that any excess of the book cost (less proceeds realized from sale) over the amount accumulated therefor in this reserve shall be debited to the appropriate surplus account, unless otherwise authorized or directed by the Commission.

D. Records shall be maintained so as to show separately the balance applicable to each item of land and land rights which is being amortized or depleted, except that natural gas land and land rights which constitute an interest in one pool of gas may be grouped to form one unit for amortization and depletion and the reserve applicable thereto need not be segregated to show the amount related to each gas right included therein.

E. This account shall be subdivided as follows:

250.21 Reserve for Amortization and Depletion of Producing Natural Gas Land and Land Rights—Gas Plant in Service.

250.22 Reserve for Amortization and Depletion of Producing Natural Gas Land and Land Rights—Gas Plant Leased to Others.

NOTE.—The utility is restricted in its use of the reserve to the purposes set forth above. It shall not divert any portion of the reserve to surplus or make any other use thereof without approval of the Commission.

[Pages [illegible] and 35 omitted.]

36 INSTRUCTIONS—GAS PLANT ACCOUNTS

1. PURPOSE OF GAS PLANT ACCOUNTS

A. The summary gas plant accounts are as follows:

100. Gas Plant.

100.1 Gas Plant in Service.
100.2 Gas Plant Leased to Others.
100.3 Construction Work in Progress.
100.4 Gas Plant Held for Future Use.
100.5 Gas Plant Acquisition Adjustments.
100.6 Gas Plant in Process of Reclassification.

107. Gas Plant Adjustments.

B. Account 100 is a caption by which shall be reported the amounts in accounts 100.1 to 100.6, inclusive.

C. Accounts 100.1 to 100.4, inclusive, are designed to show the original cost of gas plant acquired as operating units or systems by purchase, merger, consolidation, liquidation, or otherwise, and the cost to the utility of all other gas plant recorded in these accounts.

D. Account 100.5 is designed to show the difference between the cost to the utility of gas plant acquired as operating units or systems by purchase, merger, consolidation, liquidation, or otherwise, and the original cost of the plant, due consideration being given to any depreciation, depletion, or amortization recorded by the accounting utility at the date of acquisition.

E. Account 100.6 is designed to be used as a control account for gas plant at the effective date of this system of accounts pending the distribution thereof in accordance with the accounts prescribed herein.

F. Account 107 is designed to show the amount by which the book cost of gas plant at the effective date of this system of accounts differs from the cost of the plant to the utility when the difference is not properly includible in other accounts. It shall include all write-ups in the books as of the effective date of this system of accounts.

NOTE.—See balance sheet accounts 100 and 107.

484807—42 —4

## 2. Classification of Gas Plant at Effective Date of System of Accounts

A. Each utility shall classify its gas plant as of the effective date of this system of accounts in accordance with the gas plant accounts prescribed herein. The classification shall be so made as to show both the original cost and the cost to the utility of its gas plant.

B. The cost to the utility of its gas plant shall be ascertained by analysis of the utility's records. In ascertaining the cost it is not intended that any correction need be made for depreciation,
37 depletion, or amortization applicable to operating units or systems previously acquired, whether or not such depreciation, depletion, or amortization was recorded in the books of the accounting utility. It is likewise not intended that adjustments shall be made to record in gas plant accounts amounts previously charged to operating expenses in accordance with the uniform system of accounts in effect at the time or in accordance with the discretion of management as exercised under such uniform system of accounts.

C. The detailed gas plant accounts (301 to 390, inclusive) shall be stated on the basis of cost to the utility of plant constructed by it and the original cost, estimated if not known, of plant acquired as an operating unit or system. The difference between the original cost, as above, and the cost to the utility of plant includible in accounts 100.1 to 100.4, inclusive, after giving effect to any depreciation, depletion, or amortization recorded by the accounting utility at the time of acquisition, shall be recorded in Account 100.5, Gas Plant Acquisition Adjustments. The original cost of gas plant may be determined by analysis of the utility's records or those of predecessor or vendor companies with respect to gas plant previously acquired as operating units or systems and the difference between the original cost so determined and the cost to the utility, with adjustments for retirements from date of acquisition to the effective date of this system of accounts, shall be entered in Account 100.5, Gas Plant Acquisition Adjustments. When practicable, amounts recorded in account 100.5 shall be classified according to the nature of the items of which composed. Any difference between the cost of gas plant and its book cost, when not properly includible in other accounts, shall be recorded in Account 107, Gas Plant Adjustments.

D. Not later than 2 years after the effective date of this system of accounts, each utility shall have completed the studies necessary for classifying its gas plant as of the effective date of this system of accounts in accordance with the accounts prescribed herein and it shall submit to the Commission the entries it proposes to make to carry out the provisions of this instruction. It shall submit, also, a comparative balance sheet showing the accounts and amounts appearing in its books as of the effective date of this system of accounts and the accounts and respective amounts as of the same date after the proposed entries shall have been made.

E. Pending the classification of gas plant at the effective date of this system of accounts in accordance with the accounts prescribed herein, each utility shall maintain its present accounts with respect to such property as subaccounts of Account 100.6, Gas Plant in Process of Reclassification.

### 3. Gas Plant To Be Recorded at Cost

A. All amounts included in the accounts for tangible gas plant consisting of plant acquired as an operating unit or system shall be stated at the original cost incurred by the person who first devoted the property to gas service. All other tangible gas plant shall be included in the accounts at the cost incurred by the utility.

B. All amounts included in the accounts for intangible gas plant shall likewise be stated on the basis provided in paragraph A above except as otherwise provided in the texts of the intangible accounts.

38 C. Where the term "cost" is used in the detailed gas plant accounts, it shall have the meaning stated in paragraphs A and B above and shall include not only the materials, supplies, labor, services, and other items consumed or employed in the construction and installation of gas plant, but also the cost of preliminary studies, plans, surveys, engineering, supervision, and general expenses, which contribute directly and immediately to gas plant without duplication of such costs.

D. When the consideration given for property is other than cash, the value of such consideration shall be determined on a cash basis. In the entry recording such transaction, the actual consideration shall be described with sufficient particularity to identify it. The utility shall be prepared to furnish the Commission the particulars of its determination of the cash value of the consideration, if other than cash.

E. When property is purchased under a plan involving deferred payments, no charge shall be made to the gas plant accounts for interest, insurance, or other expenditures occasioned solely by such form of payment.

F. Gas plant contributed to the utility or constructed by it from contributions to it of cash or its equivalent shall be charged to the gas plant accounts at original cost. There shall be credited to the depreciation, depletion, and amortization reserve accounts the estimated amount of depreciation, depletion, and amortization applicable to the property at the time of its contribution to the utility. The difference between the amounts included in the gas plant accounts and the reserve accounts shall be credited to Account 265, Contributions in Aid of Construction.

NOTE.—Amounts received for construction which are ultimately to be refunded, wholly or in part, shall be credited to Account 241, Customers' Advances for Construction. When the amount to be refunded has been finally determined, any credit balance remaining in account 241 shall be credited to Account 265, Contributions in Aid of Construction.

### 4. GAS PLANT PURCHASED

A. When gas plant constituting an operating unit or system is acquired by purchase, merger, consolidation, liquidation, or otherwise, after the effective date of this system of accounts, the cost of acquisition, including expenses incidental thereto and properly includible in gas plant, shall be charged to Account 100.1, Gas Plant in Service, Subaccount 391, Gas Plant Purchased.

B. The accounting for the acquisition shall then be completed as following:

(1) The original cost, estimated if not known, shall be credited to Account 100.1, Gas Plant in Service, Subaccount 391, Gas Plant Purchased, and concurrently charged to Account 100.1, Gas Plant in Service, Account 100.2, Gas Plant Leased to Others, Account 100.3, Construction Work in Progress, Account 100.4, Gas Plant Held for Future Use, as appropriate, and distributed to the detailed accounts which they control.

(2) The depreciation, or amortization and depletion reserve requirements applicable to the original costs of the properties purchased, if required by the Commission to be recorded by the accounting utility, shall be charged to Account 100.1, Gas Plant in Service, Subaccount 391, Gas Plant Purchased, and concurrently credited to Account 250.1, Reserve for Depreciation of Gas Plant, Account 250.2, Reserve for Amortization and

39

Depletion of Producing Natural Gas Land and Land Rights, and Account 251, Reserve for Amortization of Other Limited-Term Gas Investments, as appropriate.

(3) The amount remaining in Account 391, Gas Plant Purchased, shall then be closed to Account 100.5, Gas Plant Acquisition Adjustments.

C. A memorandum record shall be kept of the amount of contributions in aid of construction applicable to the property acquired as shown by the accounts of the previous owner.

D. When any property acquired as an operating unit or system includes duplicate or other gas plant which will be retired by the accounting utility in the reconstruction of the acquired property or its consolidation with the previously owned property, the accounting for such property shall be presented to the Commission for consideration and approval.

E. If property acquired in the purchase of an operating unit or system is in such physical condition when acquired that it is necessary substantially to rehabilitate it in order to bring the property up to the standards of the utility, the cost of such work, except replacements, shall be accounted for as a part of the purchase price of the property.

F. In connection with the acquisition of gas plant constituting an operating unit or system, the utility shall procure, if possible, all existing records relating to the property acquired, or certified copies thereof, and shall preserve such records until specifically authorized by the Commission to destroy or otherwise dispose of them.

NOTE.—In cases of mergers or consolidations occurring prior to the determination of original cost of the plant of the merging or consolidating utilities, the accounts of the constituent utilities, with the approval of the Commission, may be combined. In the event original cost has not been determined, the resulting utility shall proceed to determine such cost as outlined herein.

### 5. COMPONENTS OF CONSTRUCTION COST

The cost of construction properly includible in the gas plant accounts shall include, where applicable, the direct and overhead costs as listed and defined hereunder:

(1) "Contract work" includes amounts paid for work performed under contract by other companies, firms, or individuals, costs incident to the award of such contracts, and the inspection of such work. It does not include the cost of work performed by the utility

on the project, a part of which is performed by others under contract.

(2) "Labor" includes the pay and expenses of employees of the utility engaged on construction work, and also workmen's compensation insurance, pay roll taxes, and similar items of expense. It does not include the pay and expenses of employees which are distributed to construction through clearing accounts nor the pay and expenses included in other items hereunder.

(3) "Materials and supplies" includes the purchase price at the point of free delivery plus customs duties, excise taxes, the cost of inspection, loading and transportation, the related stores expenses, and the cost of fabricated materials from the utility's shop. In determining the cost of materials and supplies used for construction, proper allowance shall be made for unused materials and supplies, for materials recovered from temporary structures used in performing the work involved, and for discounts allowed and realized in the purchase of materials and supplies.

NOTE A.—The cost of individual items of equipment of small value (for example, $10 or less) or of short life, including small portable tools and implements, shall not be charged to gas plant accounts unless the correctness of the accounting therefor is verified by current inventories. The cost may be charged to the appropriate operating expense or clearing accounts, according to the use of such items, or, if such items are consumed directly in construction work, the cost shall be included as part of the cost of the constructed unit.

NOTE B.—Gas owned by the utility used in well construction shall be charged thereto at the cost with an offsetting credit to Account 749, Duplicate Charges—Cr.

(4) "Transportation" includes the cost of transporting employees, materials and supplies, tools, purchased equipment, and other work equipment (when not under own power) to and from points of construction. It includes amounts paid to others as well as the cost of operating the utility's own transportation equipment. (See item 5 following.)

(5) "Special machine service" includes the cost of labor (optional), materials and supplies, depreciation, and other expenses incurred in the maintenance, operation, and use of special machines, such as steam shovels, pile drivers, derricks, ditchers, scrapers, material unloaders, and other labor-saving machines; also expenditures for rental, maintenance, and operation of machines of others. It does not include the cost of small tools and other individual items of small value or short life which are in-

cluded in the cost of materials and supplies. (See item 3, above.) When a particular construction job requires the use for an extended period of time of special machines, transportation or other equipment, the net book cost thereof, less the appraised or salvage value at time of release from the job, shall be included in the cost of construction.

(6) "Shop service" includes the proportion of the expense of the utility's shop department assignable to construction work, except that the cost of fabricated materials from the utility's shop shall be included in "materials and supplies."

(7) "Protection" includes the cost of protecting the utility's property from fire or other casualties and the cost of preventing damages to others, or to the property of others, including payments for discovery or extinguishment of fires, cost of apprehending and prosecuting incendiaries, witness fees in relation thereto, amounts paid to municipalities and others for fire protection, and other analogous items of expenditures in connection with construction work.

(8) "Injuries and damages" includes expenditures or losses in connection with construction work on account of injuries to persons and damages to the property of others; also the cost of investigation of and defense against actions for such injuries and damages. Insurance recovered or recoverable on account of compensation paid for injuries to persons incident to construction shall be credited to the account or accounts to which such compensation is charged. Insurance recovered or recoverable on account of property damages incident to construction shall be credited to the account or accounts charged with the cost of the damages.

41 (9) "Privileges and permits" includes payments for and expenses incurred in securing temporary privileges, permits, or rights in connection with construction work, such as for the use of private or public property, streets, or highways, but it does not include rents, or amounts chargeable as franchises and consents, for which see Account 302, Franchises and Consents.

(10) "Rents" includes amounts paid for the use of construction quarters and office space occupied by construction forces and amounts properly includible in construction costs for such facilities jointly used.

(11) "Engineering and supervision" includes the portion of the pay and expenses of engineers, surveyors, draftsmen, inspectors, superintendents, and their assistants applicable to construction work.

(12) "General administration capitalized" includes the portion of the pay and expenses of the general officers and administrative and general expenses applicable to construction work.

(13) "Engineering services" includes amounts paid to other companies, firms, or individuals engaged by the utility to plan, design, prepare estimates, supervise, inspect, or give general advice and assistance in connection with construction work. A copy of the agreement or arrangement under which such services are rendered shall be preserved.

(14) "Insurance" includes premiums paid or amounts provided or reserved as self-insurance for the protection against loss and damages in connection with construction, by fire or other casualty, injury to or death of persons other than employees, damages to property of others, defalcation of employees and agents, and the nonperformance of contractual obligations of others. It does not include workmen's compensation or similar insurance on employees included as "labor" in item 2, above.

(15) "Law expenditures" includes the general law expenditures incurred in connection with construction and the court and legal costs directly related thereto, other than law expenses included in protection, item 7, and in injuries and damages, item 8.

(16) "Taxes" includes taxes on physical property (including land) during the period of construction and other taxes properly includible in construction costs before the facilities become available for service.

(17) "Interest during construction" includes the net cost of borrowed funds used for construction purposes and a reasonable rate upon the utility's own funds when so used. Interest during construction shall be charged to the individual job upon which the funds are expended and shall be credited to Account 536, Interest Charged to Construction—Cr. The period for which interest may be capitalized shall be limited to the period of construction. No interest charges shall be included in these accounts upon expenditures for construction projects which have been abandoned.

NOTE.—When a part only of a plant or project is placed in operation or is completed and ready for service but the construction work as a whole is incomplete, that part of the cost of the property placed in operation, or ready for service, shall be treated as "Gas Plant in Service" and interest thereon as a charge to construction shall cease. Interest on that part of the cost of the plant which is incomplete may be continued as a charge to construction until such time as it is placed in operation or is ready for service, except as limited in items 17, above.

(18) "Earnings and expenses during construction" include (*a*) all revenues derived during the construction period from property which is included in the cost of the project under construction and (*b*) all expenses (except taxes) which are attributable to the revenues received.

### 6. Overhead Construction Costs

A. All overhead construction costs, such as engineering, supervision, general office salaries and expenses, construction engineering and supervision by others than the accounting utility, law expenses, insurance, injuries and damages, relief and pensions, taxes, and interest, shall be charged to particular jobs or units on the basis of the amounts of such overheads reasonably applicable thereto, to the end that each job or unit shall bear its equitable proportion of such costs and that the entire cost of the unit, both direct and overhead, shall be deducted from the gas plant accounts at the time the unit of property is retired.

B. The instructions contained herein shall not be interpreted as permitting the addition to gas plant accounts of arbitrary percentages or amounts to cover assumed overhead costs, but as requiring the assignment to particular jobs and accounts of actual and reasonable overhead costs.

C. The records supporting the entries for overhead construction costs shall be so kept as to show the total amount of each overhead for each year, the nature and amount of each overhead expenditure charged to each construction work order and to each gas plant account, and the bases of distribution of such costs.

### 7. Leased Property, Expenditures On

A. Except as provided in paragraph B, following, the cost of initial improvements (including repairs, rearrangements, additions, and betterments) to property leased from others made in the course of preparing the property for service and the cost of any subsequent additions or betterments to such leased property shall be charged to the gas plant or other property account appropriate for the class of property leased. (See Account 100.1 and Operating expense instruction 5.)

B. When the initial improvements to leased property which are otherwise chargeable to gas plant or other property accounts are of relatively minor cost or short life or the lease is for a period of not more than 1 year, the cost shall be charged to the account in which the rent expense is included.

C. Provision for the retirement of improvements to leased property shall be made either through Account 251, Reserve for Amortization of Other Limited-Term Gas Investments, by concurrent charges to Account 504, Amortization of Other Limited-Term Gas Investments, or through Account 250.1, Reserve for Depreciation of Gas Plant, by concurrent charges to Account 503.1, Depreciation. The annual amortization or depreciation provision shall be determined in the following manner:

(1) If the service life of the improvements is terminated by action of the lease and not by depreciation (see definition 14), then the service value of the improvements should be
43 spread over the life of the lease by charges to Account 504, Amortization of Other Limited-Term Gas Investments, and credits to Account 251, Reserve for Amortization of Other Limited-Term Gas Investments.

(2) If the service life is terminated not by action of the lease but by depreciation, then the service value of the improvements should be accounted for as depreciable plant (see Accounts 503.1 and 250.1).

### 8. Temporary Facilities

When property ordinarily having a service life of more than 1 year is installed for temporary use in gas service, it shall be accounted for in the manner prescribed for gas plant in service.

### 9. Land and Land Rights

A. "Land and land rights" means land owned in fee by the utility and rights, interests, and privileges held by the utility in land owned by others, such as leaseholds, easements, natural gas rights, rights-of-way, and other like interests in land.

B. The accounts for land and land rights shall include the first cost, including the amounts of mortgages or other liens assumed, but not rents payable periodically with respect to such rights.

C. Where special assessments for public improvements provide for deferred payments, the full amount of the assessments shall be charged to the appropriate land account and the unpaid balance shall be carried in an appropriate liability account. Interest on unpaid balances shall be charged to the appropriate interest account. If any part of the cost of public improvements is included in the general tax levy, the amount thereof shall be charged to the appropriate tax account; otherwise the cost of public improvements, including cost of sidewalks and curbs constructed by the

utility on public streets, should be charged to the accounts for land and land rights.

D. The net profit from the sale of timber, cordwood, or other property acquired with rights-of-way or other lands shall be credited to the appropriate land and land rights account. Where land is held for a considerable period of time and timber on the land at the time of purchase increases in value, the net profit (after giving effect to the cost of the timber) from the sales of timber or its products shall be credited to Account 526, Miscellaneous Nonoperating Revenues.

E. Separate entries shall be made for the acquisition, transfer, or retirement of each parcel of land, and each land right, or gas right (except rights-of-way for distribution lines) having a life of more than 1 year. A record shall be maintained showing the nature of ownership, full legal description, area, map reference, purpose for which used, city, county, and tax district in which situated, from whom purchased or to whom sold, payment given or received, other costs, contract date and number, date of recording of deed, and book and page of record. Entries transferring or retiring land or land rights shall refer to the original-entry recording its acquisition. A parcel of land acquired and carried on the books as a unit is not required to be subdivided with transfers to other land accounts merely because of the erection thereon of an incidental structure to be used in gas operations but for a purpose differing from that for which the land is chiefly employed; for example, a small general storehouse on production plant land.

44 F. Any difference between the amount received from the sale of land or land rights, less agents' commissions and other costs incident to the sale, and the book cost of such land or rights, shall be charged to Account 414, Miscellaneous Debits to Surplus, or credited to Account 401, Miscellaneous Credits to Surplus, as appropriate, unless a reserve therefor has been authorized and provided. Appropriate adjustments of the accounts shall be made with respect to any structures or improvements located on land sold.

G. Entries to the gas plant accounts for limited-term interests in land (except rights-of-way for distribution lines) shall make specific reference to the lease, contract, or arrangement under which each interest is held or used, together with a concise statement of the terms of the lease, contract, or arrangement.

H. The cost of buildings and other improvements (other than public improvements) shall not be included in the land accounts. If at the time of acquisition of an interest in land such interest extends to buildings or other improvements (other than public improvements), which are then devoted to gas operations, the land and improvements shall be separately appraised and the cost allocated to land and buildings or improvements on the basis of the appraisals. If the improvements are removed or wrecked without being used in operations, the cost thereof and the cost of removing or wrecking shall be charged and the salvage credited to the account in which the cost of the land is recorded.

I. The cost of land and land rights acquired in excess of that used in gas operations shall be included in Account 110, Other Physical Property, or Account 100.4 Gas Plant Held for Future Use, as appropriate. Regarding land and land rights held for the production of natural gas: Account 100.1, Gas Plant in Service, shall include (1) the cost of lands owned in fee upon which producing natural-gas wells are located or lands owned in fee which are being drained through the operation by the utility of wells on other land, and (2) the first cost of lands held under lease upon which the utility pays royalties for the natural gas obtained therefrom. The cost of all other land and land rights held for the production of natural gas under a definite plan for such use shall be included in Account 100.4, Gas Plant Held for Future Use.

NOTE.—In addition to the accounting records prescribed herein, supplemental records of land and land rights held for future use shall be kept in such manner as to permit the segregation within a reasonable time of the land and land rights constituting (1) productive but nonproducing fields, and (2) unproven or undeveloped fields, and to show the following data with respect to each natural gas lease, regardless of the accounting treatment accorded the lease costs: (*a*) name of lessor, (*b*) location of leasehold and number or other identification assigned thereto, (*c*) date and period of lease agreement, (*d*) first cost of lease including details of the elements of such cost, (*e*) annual rental provisions, (*f*) date and cost of drilling, (*g*) date gas determined to exist, (*h*) date of completion of first well drilled by the utility in each pool of gas, (*i*) royalty provisions, (*j*) amortization and depletion provisions, and (*k*) date of abandonment of lease.

J. When the purchase of land for gas operations requires the purchase of land not used for such purposes, the charge to the specific land account shall be based upon the estimated cost of only that portion which is used for gas operations. The cost of the remaining land shall be included in Account 100.4, Gas Plant

Held for Future Use, or Account 110, Other Physical Property, as appropriate.

45 K. Provision shall be made for amortizing amounts carried in the accounts for limited-term interests in land. The amortization of limited-term interests in land shall be accomplished in such manner as to apportion equitably the cost of each interest over the life thereof and to produce a charge to operating expenses, for each accounting period, of the amount properly chargeable thereto for such period. For the purposes of amortization of natural gas rights, separate interests in land which constitute an interest in one pool of gas may be grouped to form a depletion unit. (See Account 250.2, Reserve for Amortization and Depletion of Producing Natural Gas Land and Land Rights, Account 250.3, Reserve for Abandoned Leases, and Account 251, Reserve for Amortization of Other Limited-Term Gas Investments; also Account 503.2, Amortization and Depletion of Producing Natural Gas Land and Land Rights, Account 504, Amortization of Other Limited-Term Gas Investments, and Account 512, Abandoned Leases.)

L. The items of cost to be included in the accounts for land and land rights are as follows:

Bulkheads, buried, not requiring maintenance or replacement.
Cost, first, of acquisition including mortgages and other liens assumed (but not subsequent interest thereon).
Clearing (first cost) the land of brush, trees, and debris.
Condemnation proceedings, including court and counsel costs.
Consents and abutting damages, payment for.
Conveyancers' and notaries' fees.
Fees, commissions, and salaries to brokers, agents, and others in connection with the acquisition of the land or land rights.
Grading the land, except when directly occasioned by the building of a structure.
Leases, cost of voiding upon purchase to secure possession of land.
Removing, relocating, or reconstructing property of others, such as buildings, highways, railroads, bridges, cemeteries, churches, telephone and power lines, etc., in order to acquire quiet possession.
Retaining walls unless identified with structures.
Special assessments levied by public authorities for public improvements on the basis of benefits for new roads, new bridges, new sewers, new curbing, new pavements, and other public improvements, but not taxes levied to provide for the maintenance of such improvements.
Surveys in connection with the acquisition
Taxes, assumed, accrued to date of transfer of title.
Title, examining, clearing, insuring, and registering in connection with the acquisition and defending against claims relating to the period prior to the acquisition.

## 10. Structures and Improvements

A. "Structures and improvements" means all permanent buildings and structures to house, support, or safeguard property or persons, and improvements of a permanent character other than public improvements on or to land.

B. "Buildings" means permanent structures to house, support, or safeguard property or persons, including all fixtures permanently attached to and made a part of buildings and which cannot be removed therefrom without cutting into the walls, ceilings, or floors, or without in some way impairing the buildings.

C. "Improvements" means permanent improvements (other than buildings) to land.

46 D. Items of cost:

Architects' plans.
Ash pits (when located within the building proper).
Athletic field structures and improvements.
Boilers, furnaces, piping, wiring, fixtures, and machinery for heating, lighting, signaling, ventilating, and plumbing.
Bulkheads, including dredging, riprap fill, piling, decking, concrete, fenders, etc., when exposed and subject to maintenance and replacement.
Chimneys.
Coal bins and bunkers.
Commissions and fees to brokers, agents, architects, and others.
Conduit (not to be removed) with its contents.
Damages to abutting property during construction.
Docks.
Door checks and door stops.
Drainage and sewerage systems.
Elevators, cranes, hoists, etc., and the machinery for operating them.
Excavation, including shoring, bracing, bridging, refill, and disposal of excess excavated material.
Fences and fence curbs (not including protective fences isolating individual items of equipment, which should be charged to the appropriate equipment account).
Fire protection systems when forming a part of a structure.
Floor covering (permanently attached).
Foundations and piers for machinery, constructed as a permanent part of a building or other item listed herein.
Grading when directly occasioned by the building of a structure.
Holders—relief.
Holders—waterless, including steel structure, piston elevators, cost of first tar seal, tar apparatus and storage tanks, stairways, etc.
Holders—waterseal, including tank construction, water, holder lifts, framework; stairways, and heating equipment.
Inlet and outlet lines to holders and storage tanks, including inlet and outlet valve pits and drip pumps.

Intrasite communication system, poles, pole fixtures, wires, and cables.
Landscaping, lawns, shrubbery, etc.
Leases, voiding upon purchase, to secure possession of structures.
Leased property, expenditures on.
Lighting fixtures and outside lighting systems.
Natural gas wells used solely for storage of gas.
Painting, first.
Partitions, including movable.
Permits and privileges.
Platforms, railings, and gratings, when constructed as a part of a structure.
Power boards for services to a building.
Refrigerating systems for general use.
Retaining walls, except when identified with land.
Roadways, railroads, bridges, and trestles intrasite, except railroads provided for in equipment accounts.
Scales, connected to and forming a part of a structure.
Screens.
Sewer systems, for general use.
Sidewalks, curbs, and streets constructed by the utility, except sidewalks and curbs on public streets.
Sprinkling systems.
Stacks—brick, steel, or concrete, when set on foundation forming part of general foundation and steelwork of a building.
Storage facilities constituting a part of a building.
Storm doors and windows.
Subways, areaways, and tunnels, directly connected to and forming part of a structure.
Tanks constructed as part of a building or as a distinct structural unit.
Tunnels, intake and discharge, when constructed as part of a structure, and those constructed to house mains.
Vaults constructed as part of a building.
47 Water-front improvements.
Water-supply piping, hydrants, and wells.
Water-supply system for a building or general company purposes.
Wharves.
Window shades and ventilators.
Yard-drainage system.
Yard-lighting system.
Yard surfacing, gravel, concrete, or oil.

NOTE.—The cost of disposing of material excavated in connection with construction shall be considered as a part of the cost of such work, except as follows: (*a*) When such material is used for filling, the cost of loading, hauling, and dumping shall be equitably apportioned between the work in connection with which the removal occurs and the work in connection with which the material is used; (*b*) when such material is sold, the net amount realized from such sales shall be credited to the work in connection with which the removal occurs. If the amount realized from the sale of excavated materials exceeds the removal costs and the costs in connection with the sale, the excess shall be credited to the land account in which the site is carried.

E. Items not included in buildings:

(1) Do not include in the cost of buildings, lighting, heating, or other fixtures temporarily attached for purposes of display or demonstration.

(2) The cost of specially provided foundations not intended to outlast the machinery or apparatus for which provided, and the cost of angle irons, castings, etc., installed at the base of an item of equipment, shall be charged to the same account as the cost of the machinery, apparatus, or equipment.

(3) When furnaces and boilers are used primarily for furnishing steam for some particular department and only incidentally for furnishing steam for heating a building and operating the equipment therein, the entire cost of such furnaces and boilers shall be charged to the appropriate plant account, and no part to the building account.

(4) Minor buildings and structures may be considered a part of the facility in connection with which constructed or operated and the cost thereof accounted for accordingly when the nature of the structure and facility indicates the correctness of such accounting.

## 11. Equipment

A. "Equipment," as used in this system of accounts, means all tangible utility plant, other than land and structures as herein defined.

B. The cost of equipment, unless otherwise indicated in the text of an equipment account, includes, in addition to the actual price thereof, sales taxes, investigation and inspection expenses necessary to such purchase, expenses of transportation when borne by the utility, labor employed, materials and supplies consumed, and expenses incurred by the utility in unloading and placing the equipment in readiness to operate.

C. Exclude from equipment accounts hand and other portable tools which are likely to be lost or stolen or which have relatively small value ($10 or less) or short life, unless the correctness of the accounting therefor is verified by current inventories. Special tools acquired and included in the purchase price of equipment shall be included in the appropriate plant account. Portable drills and similar tool equipment when used in connection with the operation and maintenance of a particular plant or department, such

as production, transmission, distribution, etc., or in "stores," shall be charged to the plant account appropriate for their use.

48 D. The equipment accounts shall include angle irons and similar items which are installed at the base of an item of equipment, but piers and foundations which are designed to be as permanent as the buildings which house the equipment, or which are constructed as a part of the building, and which cannot be removed without cutting into the floors or the walls of the building, shall be included in the building accounts.

E. The equipment accounts shall include all the necessary costs of testing or running a plant or part thereof during an experimental or test period prior to becoming available for service. The accounting utility shall furnish the Commission with full particulars of and justification for any test or experimental run extending beyond a period of 30 days.

F. The cost of efficiency or other tests made subsequent to the date equipment becomes available for service shall be charged to the appropriate expense accounts, except that tests to determine whether equipment meets the specifications and requirements as to efficiency, performance, etc., guaranteed by manufacturers, made after operations have commenced and within the period specified in the agreement or contract of purchase, may be charged to the appropriate gas plant account.

### 12. Additions and Retirements of Gas Plant

A. For the purpose of avoiding undue refinement in accounting for additions to and retirements and replacements of gas plant, all property shall be considered as consisting of (1) retirement units and (2) minor items of property.

B. *Retirement units.*—Each utility shall adopt the List of Retirement Units contained in Appendix I of this system of accounts for use in accounting for additions to and retirements and replacements of gas plant.

(1) When a retirement unit is added to gas plant, the cost thereof shall be added to the appropriate gas plant account, except that when retirement units are acquired in the acquisition of any gas plant constituting an operating system, they shall be accounted for as provided in Gas plant instruction 4.

(2) When a retirement unit is retired from gas plant, with or without replacement, the book cost thereof shall be credited to

the gas plant account in which it is included, determined in the determined in the manner set forth in paragraph D, below. If the retirement unit is of a depreciable class, the book cost of the unit retired and credited to gas plant shall be charged to the depreciation reserve provided for such property. (See par. G, below, and Gas plant instruction 13.)

C. *Minor items of property.*—(1) When a minor item of property which did not previously exist is added to plant, the cost thereof shall be accounted for in the same manner as for the addition of a retirement unit, as set forth in paragraph B(1), above, if a substantial addition results, otherwise the charge shall be to the appropriate operating expense account.

(2) When a minor item of property is retired and not replaced, the book cost thereof shall be credited to the gas plant account in which it is included; and, in the event the minor item is a part of depreciable plant, the depreciation reserve shall be charged with the book cost and cost of removal and credited with
49 the salvage. If, however, the book cost of the minor item retired and not replaced has been or will be accounted for by its inclusion in the retirement unit of which it is a part when such unit is retired, no separate credit to the property account is required, when such minor item is retired.

(3) When a minor item of depreciable property is replaced independently of the retirement unit of which it is a part, the cost of replacement shall be charged to the maintenance account appropriate for the item, except that if the replacement effects a substantial betterment (the primary aim of which is to make the property affected more useful, more efficient, of greater durability, or of greater capacity), the excess cost of the replacement over the estimated cost at current prices of replacing without betterment shall be charged to the appropriate gas plant account.

D. *Determination of book cost.*—The book cost of gas plant retired shall be the amount at which such property is included in the gas plant accounts, including all components of construction costs. The book cost shall be determined from the utility's records and if this cannot be done, it shall be estimated. When it is impracticable to determine the book cost of each item, due to the relatively large number or small cost thereof, the average book cost of the items, with due allowance for any differences in size and character, shall be used as the book cost of the items retired.

E. *Land retired.*—The book cost of land retired shall be credited to the appropriate land account. If the land is sold, the difference

between the book cost (less any reserve therefor which has been authorized and provided) and the sale price of the land (less commissions and other expenses of making the sale) shall be credited to Account 401, Miscellaneous Credits to Surplus, or debited to Account 414, Miscellaneous Debits to Surplus, as appropriate. If the land is not used in gas service but is retained by the utility, the book cost shall be charged to Account 100.4, Gas Plant Held for Future Use, or Account 110, Other Physical Property, as appropriate.

F. *Gas plant sold.*—When gas plant constituting an operating unit or system is sold, conveyed, or transferred to another by sale, merger, consolidation, or otherwise, the book cost of the property sold or transferred to another shall be credited to the appropriate gas plant accounts, including amounts carried in Account 100.5, Gas Plant Acquisition Adjustments, and the amounts (estimated if not known) carried with respect thereto in the depreciation and amortization reserve accounts and in Account 241, Customers' Advances for Construction, and Account 265, Contributions in Aid of Construction, shall be charged to such reserves and accounts. Unless otherwise ordered by the Commission, the difference, if any, between (a) the net amount of debits and credits and (b) the consideration received for the property (less commissions and other expenses of making the sale) shall be included in Account 414, Miscellaneous Debits to Surplus, or Account 401, Miscellaneous Credits to Surplus, as appropriate. (See Account 392, Gas Plant Sold.)

G. The service value of gas plant retired, which is subject to charges for depreciation, shall be charged in its entirety to Account 250.1, Reserve for Depreciation of Gas Plant. Any amounts which by approval or order of the Commission are charged to Account 141, Extraordinary Property Losses, shall be credited to Account 250.1, Reserve for Depreciation of Gas Plant.

H. The accounting for the retirement of amounts included in Account 302, Franchises and Consents, and Accounts 303, Miscellaneous Intangible Plant, and the items of limited-term interests in land included in the accounts for land and land rights, shall be as provided in the text of Account 250.2, Reserve for Amortization and Depletion of Producing Natural Gas Land and Land Rights, and Account 503.2, Amortization and Depletion of Producing Natural Gas Land and Land Rights, or Account 251, Reserve for Amortization of Other Limited-Term

Gas Investments, and Account 504, Amortization of Other Limited-Term Gas Investments, as appropriate.

I. Additions and retirement of gas plant shall not be netted in the entries or in the posting of the entries.

### 13. Work Order System Required

A. All changes in gas plant (except the purchase or sale of gas plant constituting an operating unit or system) shall be recorded by means of work orders or job orders. Separate work orders may be opened for additions to and retirements of gas plant or the retirements may be included with the construction work order, provided, however, that all items relating to retirements shall be kept distinctly separate from those relating to construction, and provided further, that any maintenance costs involved in the work shall likewise be kept distinctly separate.

B. Each utility shall keep its work order system in such manner as to show the nature of each addition to or retirement of gas plant, the total cost thereof, the source or sources of costs, and the gas plant account or accounts to which charged or credited. Work orders covering jobs of short duration may be cleared monthly.

### 14. Transfers of Property

When property consisting of one or more retirement units is transferred from one account for gas plant to another or to Account 110, Other Physical Property, from one utility department to another, such as from gas to electric, from one operating division or area to another, to or from Account 100.1, Gas Plant in Service, Account 100.2, Gas Plant Leased to Others, and Account 100.4, Gas Plant Held for Future Use, the transfer shall be recorded by transferring the book cost thereof from the one account, department, or location to the other, and likewise any related amounts carried in Account 100.5, Gas Plant Acquisition Adjustments, in the depreciation reserve, and other accounts shall be transferred in accordance with the segregation of such reserves and other accounts.

Note.—Amounts included in Account 250.3, Reserve for Abandoned Leases, shall not be related to a particular lease and, therefore, shall not be transferred under the provisions of this instruction.

## 15. Common Utility Plant

A. If the utility is engaged in more than one utility service, such as electric, gas, and street railway, and any of its utility plant is used in common for several utility services or for other purposes to such an extent and in such manner that it is impracticable to segregate it by utility services currently in the accounts, such property may, but only with the approval of the Commission, be designated and classified as "Common Utility Plant."

51 B. Utility plant designated as common utility plant shall be classified according to the detailed utility plant accounts appropriate for the property.

C. The utility shall be prepared to show at any time and to report to the Commission annually, or more frequently if required, and by utility plant accounts (301 to 392), the following: (1) The book cost of common utility plant, (2) the allocation of such cost the respective departments using the common utility plant, and (3) the basis of the allocation.

D. The depreciation, amortization, and depletion reserves of the utility shall be so segregation as to show the amount of each reserve applicable to the property classified as common utility plant.

E. The expenses of operation, maintenance, depreciation, amortization, and depletion of common utility plant shall be recorded in the accounts prescribed herein, but designated as common expenses, and the allocation of such expenses to the departments using the common utility plant shall be supported in the same manner as the allocation of the cost of such property.

## 16. Transmission and Distribution Plant

For the purpose of this system of accounts:

A. "Transmission system" means the land, structures, mains, valves, meters, boosters, regulators, tanks, compressors, and their driving units and appurtenances and other equipment used primarily for transmitting gas to a particular municipality or distribution system. The transmission system begins at the outlet side of the valve at the connection between the gathering lines or other source of supply and inlet to the transmission compressor station or other gathering terminals, and includes the equipment at such connection that is used to bring the gas to transmission pressure.

and ends at the inlet side of the equipment with meters or regulates the entry of gas into the distribution system. It does not include storage land or structures.

B. "Distribution system" means the mains which are provided primarily for distributing gas within a distribution area or for connecting two or more districts within a distribution area, together with land, structures (other than storage land and structures), valves, regulators, services, and measuring devices. The distribution system begins at the inlet side of the equipment which meters or regulates the entry of gas into the distribution system, and ends with, and includes, property on the customers' premises.

[Pages 72 to 171 omitted.]

1 **EXHIBIT NO. 76.—GAS PLANT, ADDITIONS AND RETIREMENTS, DEPRECIATION AND DEPLETION FOR THE YEAR ENDED DECEMBER 31, 1939, F. P. C. WITNESS DUNN**

## WRITTEN STATEMENT

The Federal Power Commission, under date of October 14, 1938, issued an order of investigation into and concerning all rates, charges, classifications, rules, regulations, practices, or contracts of Hope Natural Gas Company. In accordance therewith, an examination of the accounts and records of Hope Natural Gas Company has been made and, as a result, this report on the 1939 plant additions and retirements and depreciation and depletion is submitted.

This report is a supplement to the original cost report and the depreciation and depletion report. It is submitted in order to show the effect of 1939 changes. The examiners did not make a detailed examination of the cost of additions and retirements, but did make such analysis as was necessary to group the property changes according to the depreciable and depletable classifications which are set forth in the exhibits as of December 31, 1938, and continued in this exhibit as set forth in Schedule No. 1.

SUMMARY OF PLANT CHANGES (EXCLUSIVE OF DISTRIBUTION PLANT)

| | |
|---|---|
| Gas plant in service Dec. 31, 1938 | $51,207,620.64 |
| 1939 plant additions | 699,548.75 |
| 1939 plant retirements | (808,145.67) |
| Gas plant in service, Dec. 31, 1939 | 51,099,023.72 |
| Balance in depreciation and depletion reserves as at Dec. 31, 1938 | 23,501,355.80 |
| 1939 provision—add | 1,290,825.07 |
| 1939 net charge—deduct | (720,013.70) |
| Balance in depreciation and depletion reserves as at Dec. 31, 1939 | 24,072,167.17 |
| Net original cost at Dec. 31, 1939 | 27,026,856.55 |

2 PLANT ADDITIONS—YEAR 1939

The gross increase in Fixed Capital assets during the year ended December 31, 1939, amounted to $1,179,896.75 which amount is shown by accounts, by Schedule No. 6. For purposes of applying the depreciation and depletion rates the amount of $694,469.97, representing the additions to Production, Transmission, and General Plant, excluding nondepreciable items, was used. This latter amount is shown, by accounts, in Column (b) of Schedule 1.

Beginning January 1, 1939, Hope Natural Gas Company changed an accounting policy it had followed consistently from the beginning of operations, a period of forty years, which practice concerns the capitalization of general administrative expenses. The company did not capitalize such costs prior to January 1, 1939.

During the year, 1939, an amount of $79,438.56 was transferred from general and administrative expenses and included in plant accounts. This amount was determined by applying the percentages shown below, as described in Statement F of Exhibit 20:

| | |
|---|---|
| Payroll | 1.2% |
| Purchasing | 3.2% |
| General | 5.9% |
| Land | 3.1% |
| Property Purchased | ¼ of 5.9% |

The average rate for overheads on general construction expenditures, excluding leaseholds, is about 7.6% for the year 1939.

The examiners of accounts have not adjusted the general and administrative expenses capitalized in 1939.

An amount representing interest during construction has been capitalized by the company during the year 1939 and cred-
3 ited to an income account, Interest during Construction—Cr., in the amount of $7,355.85. (See Schedule No. 1 of Income Statement.)

PLANT RETIREMENTS—YEAR 1939

The retirements recorded during the year 1939 amounted to $1,001,162.11 which amount is shown, by accounts, in Column (e) of Schedule No. 6. Certain adjustments, set forth in Column (f), have been made by the examiners to the recorded retirements for the following reasons:

1. As a result of the physical inventory and original cost studies, certain unrecorded retirements were noted as of December 31, 1938. Such retirements were given effect to in the original cost exhibits

although not entered on the books until 1939. To avoid duplication such retirements are eliminated from the 1939 figures.

2. The original cost studies corrected the book cost of many items of property. The 1939 retirements were recorded at book cost and the examiners have made the necessary corrections to retire property at the adjusted original cost.

The above-mentioned examiners' adjustments are shown in Column (f) of Schedule No. 6. For purpose of computing 1939 depreciation expense, the amount of $807,938.44, representing retirements of Production, Transmission and General Plant, is used. This amount, by accounts, is shown in Column (c) of Schedule No. 1.

## Depreciation and Depletion Provisions—1939

The annual expense for depreciation and depletion, for the year 1939, has been computed in the same manner as the expense for preceding years. Data on gas produced and remaining gas reserves are taken from the Geologists' report and service lives
4 are the same as those used in the report on Depreciation and Depletion as at December 31, 1938.

Details of depletion by production areas are shown in Schedules Nos. 2, 3, 4, and 5. Depreciation details are shown in Schedule No. 1.

## Net Charges to Reserves—Year 1939

The reserve charges as shown in Column (g) of Schedule No. 1 and developed in Columns (b) and (c) of Schedule No. 1-A, are determined from two different sources, but are tied in with the net charges to the reserve as reflected by Company Statement, Schedule No. 7-A.

The Company statement sets forth the net charges to the reserve in the amounts and classifications as shown in Column (a) of Schedule No. 1-A.

Certain analyses were made, by the Federal Power Commission accountants, of the plant accounts and retirements for the property grouped under the classifications of Right-of-Way and Field Line Labor, Operated Acreage, Gas Well Construction, and Cost of Abandoning Gas Wells. The reserve charges as developed by these analyses were applied to those property classifications. The charges for Drilling and Cleaning Equipment were shown segregated in the Company statement and were so applied. The re-

maining charges to Production System Property have been allocated to the two classifications—Production System Structures, and Field Line Material and Station Equipment.

Schedule No. 7–A shows charges applicable to Gas Well Equipment in the amount of $233,958.91 which includes the cost of abandoning gas wells. Since the cost of abandoning gas wells has been separately provided for, the cost thereof in the amount of $75,324.15 is deducted from $233,958.91 to arrive at the charge for Gas Well Equipment, exclusive of the cost of abandoning gas wells, namely, $158,634.76.

The loss on property retired, as developed by the analysis of the plant accounts and retirement work orders, for the Gas Well Construction and Operated Acreage classifications is not exactly the same as shown by Schedule No. 7–A. This difference, shown in Column (d), Schedule No. 1–A, is due to the fact that certain retirement work orders, as far as the Company statement was concerned, remained in Account 144, Retirement Work in Progress.

Other charges shown by Company statement were grouped according to Transmission Plant, General Plant, and Other Property.

| 250.2 | Amortization and depletion of producing natural gas lands and land rights | 489,034.48 | 18,400.00 | [3] 489,000.00 | 507,400.00 | 23,214.26 | | 23,214.26 | 973,220.22 | 816,382.44 | 1,789,602.66 |
| 250.3 | Abandoned leases | 231,299.52 | | | | 23,067.31 | | 23,067.31 | 208,232.21 | 31,911.39 | 240,143.60 |
| 251 | Amortization of other limited term utility investment | 813.44 | 6,369.47 | | 6,369.47 | | | | 7,182.91 | | 7,182.91 |
| 253 | Amortization and depreciation of other property | 80,456.25 | 6,631.20 | | 6,631.20 | | | | 87,087.45 | | 87,087.45 |
| 258.6 | Other reserves—Clarksburg Light & Heat Company | 45,431.90 | 4,740.72 | | 4,740.72 | | | | 50,172.62 | | 50,172.62 |
| | Total | 40,759,450.48 | 1,336,141.39 | 532,677.45 | 1,868,818.84 | 767,582.15 | 489,000.00 | 1,256,582.15 | 41,271,687.17 | 4,819,640.26 | 46,091,327.43 |

[1] Estimated on basis of Rhodes depreciation rates.

[2] Charged to clearing accounts.

[3] No depletion was set up for operated acreage prior to 1921, therefore the reserve is understated. The reserve for depreciation of utility plant (account 250.1) is thought to be overstated. To adjust the reserve account 250.2, a transfer of $489,000 was made to that account from account 250.1.

[Page 19 omitted.]

18 **EXHIBIT NO. 117.—UNIFORM CLASSIFICATION OF ACCOUNTS FOR NATURAL GAS COMPANIES PRESCRIBED BY THE PUBLIC SERVICE COMMISSION OF WEST VIRGINIA (1923)**

[Pages 1–17 omitted]

## I. FIXED CAPITAL ACCOUNTS

100. Fixed Capital Installed Prior to January 1, 1923.

Charge to this account the book value, at the close of December 31, 1922, of all fixed capital owned and used by the utility in the conduct of its natural gas operations. No charge shall be made to this account for any fixed capital acquired after December 31, 1922.

When any item of fixed capital carried in this account is retired from service, credit to this account the amount at which it is carried herein, charge to the appropriate sub-account of "121. Materials and Supplies" account any salvage recovered from it; charge to "183. Depreciation Of Structures And Equipment Reserve" account the amount reserved from January 1, 1923, to provide for the loss suffered by it since that date from wear, tear, obsolescence, etc.; charge to the reserve account provided prior to January 1, 1923, the accumulated amount reserved at the close of December 31, 1922, to provide for like loss suffered by it; and charge either to "709. Amortization Unprovided For Elsewhere" or to "131. Property Abandoned" account, as the Public Service Commission may direct, the net loss sustained on it.

The charge to "131. Property Abandoned" account shall be made on the basis of the money cost of such fixed capital less the amount of salvage recovered therefrom and the amount reserved for depreciation thereof.

Any excess of the amount at which such retired fixed capital is carried in this account over its money cost shall be charged to "709. Amortization Unprovided For Elsewhere" account.

This account is a controlling account of the various accounts that were combined on January 1, 1923, to make it.

[Pages 19 to 144 omitted.]

## EXHIBIT NO. 98.—PRINCIPAL PROPERTY PURCHASES, 1898–1938, AND HOW THESE PURCHASES WERE RECORDED IN THE COMPANY'S PLANT ACCOUNTS AT THE TIME OF PURCHASE, HOPE WITNESS ANTONELLI

PURCHASES FROM OTHER UTILITIES

| Year | Vendor | Voucher No. | Purchase price | Property recorded in Hope's plant account as follows |
|---|---|---|---|---|
| (1) | (2) | (3) | (4) | (5) |
| 1902 | Flaggy Meadow Gas Company | M–61 | $1,174,010.60 | At purchase price. |
| 1908 | Lawrence Natural Gas Company | M–72 | 26,501.93 | At purchase price (less $9,716.41 charged to expense). |
| 1909 | Columbia Gas Company | C–232 | 50,000.00 | At purchase price (less $199.83 charged to expense). |
| | Greenwood Gas Company | G–33 | 7,500.00 | At purchase price (less $855.67 charged to expense). |
| 1910 | Mountain State Gas Company | D–302 | 663,663.98 | At vendor's book cost of $1,298,611.31. The difference between such cost and the purchase price (less $4,181.37 charged to expense) was added to Hope's depreciation reserve. |
| | Home Gas Company | J–371 | 75,000.00 | At purchase price (less $1,886.79 charged to expense). |
| | Flint Natural Gas Company | M–361 | 8,100.00 | At purchase price (less $6,124.65 principally for well drilling charged to expense). |
| | Fayette County Gas Company | G–353 | 600,000.00 | At purchase price (less $130,586.75 principally for well drilling charged to expense). |
| 1911 | Burt Oil Company | G–429 | 7,500.00 | At purchase price. |
| | Light Fuel & Power Company | M–413 | 16,038.88 | At purchase price. |
| | Manufacturers Light & Heat Company | H–411 | 1,050,000.00 | At purchase price (less $1,493.16 charged to expense). |
| 1912 | The Mt. Clare Gas Company | L–109 | 17,500.00 | At purchase price. |
| 1917 | Rural Gas Company | M–368 | 45,000.00 | At purchase price (less $8,386.61 charged to expense). |
| 1921 | Pittsburgh & West Virginia Gas Company | C–83<br>F–160<br>J–8 | 9,200.00 | At purchase price (less $44.98 charged to expense). |
| 1925 | Keeners Oil, Natural Gas & Fuel Company | K–30 | 112,000.00 | At purchase price. |
| 1928 | Light, Fuel & Power Company (Welwood) | C–226 | 80,000.00 | At purchase price. |
| 1929 | Glenville Natural Gas Company | E–175 | 17,304.13 | At purchase price. |
| | Godfrey L. Cabot, Inc | M–351 | 700,000.00 | At purchase price. |

4 **EXHIBIT NO. 73.—COMPARISON OF REPRODUCTION COST NEW OF LINE PIPE, AS OF DECEMBER 31, 1938, INCLUDED IN HOPE NATURAL GAS COMPANY'S EXHIBIT 16D, WITH ACTUAL LINE PIPE COSTS PREVAILING DURING THE YEAR 1939, F. P. C. WITNESS BODNER**

[Pages 1 to 3 omitted]

## WRITTEN STATEMENT

Hope Natural Gas Company's Exhibit 16–D, pages 259–268, presents an estimate of the reproduction cost new of Account 358, Mains of Hope Natural Gas Company, as of December 31, 1938.

### Pipe Costs

Exhibit 16–A, page 22, and the underlying working papers relating to the development of the unit costs for pipe lines, show that the prices for line pipe (and casing used as line pipe) contained in Exhibit 16–D, page 261, are based on manufacturers' quoted prices as of December 31, 1938, less ten percent large users' discount less two percent cash discount, with an additional deduction of ten percent of the net discounted price as an allowance obtainable on large tonnage purchases. (See also T. p. 738.)

The records of Hope Natural Gas Company (which are substantially in agreement with pipe quantities given in Exhibit 16–D, page 261) indicate that there are approximately 98,500 tons of plain-end steel lapweld line pipe and casing in transmission pipe lines of the company as of December 31, 1938 (exclusive of line pipe and casing used as protective casing).

5 Pricing of a large tonnage of steel pipe such as in the Hope Natural Gas Company system on a reproduction cost new basis involves the determination of prevailing prices for large quantity purchases of pipe. In view of this, the pipe costs experienced by natural gas companies that had large pipeline construction activity were used as the basis for this exhibit.

During the year 1939 major gas pipeline projects were constructed by a number of natural gas companies. Several of these companies have submitted to the Commission, upon request, com-

plete data concerning the quantity and type of pipe purchased and the prices paid therefor. Copies of purchase orders and copies of typical invoices for steel line pipe purchased for major gas pipeline construction during the year 1939 were furnished by Northern Natural Gas Company, United Gas Pipe Line Company, El Paso Natural Gas Company, Michigan Gas Transportation Corporation; and a sworn statement of transmission line costs was filed by Louisiana-Nevada Transit Company. These data are available in the working papers underlying this exhibit.

The information furnished by these five natural gas companies for pipe sizes 8⅝" O. D. to 24" O. D. was analyzed and summarized. The purchases so summarized covered more than 625 miles of line pipe, with a total weight of approximately 64,000 tons, and a cost of approximately $2,750,000. Practically
6 all this pipe was double random lengths varying between 30 to 49 feet per joint. All of this pipe was either seamless or electric-weld line pipe and the prices were higher than the price of new lapweld pipe. Lapweld pipe has been used in practically all of the transmission pipelines of the Hope Natural Gas Company system.

The pipe information compiled on the 1939 purchases made by the five companies was grouped on a weighted average basis into the following classifications:

1. Pipe with a diameter of 10¾" O. D. to 24" O. D.
2. Pipe with a diameter of 8⅝" O. D.

The first classification is based on the fact that United Gas Pipe Line Company purchased approximately 21,500 tons of seamless steel pipe, in sizes varying from 10¾" O. D. to 22" O. D. at a single price of $43.00 per ton at Lorain, Ohio, at the time it built its Monroe-Jackson line.

The weighted average price of the approximately 57,200 tons of seamless and electric weld line pipe of the first classification (10¾" O. D. to 24" O. D.), purchased by the companies studied is $42.63 per ton net f. o. b. Lorain, Ohio. The weighted average price of approximately 7,200 tons of seamless and electric weld
7 line pipe of the second classification (8⅝" O. D.) purchased by these companies is $48.98 per ton net f. o. b. Lorain and Youngstown, Ohio. The prices paid for the different sizes of pipe vary from a minimum of $39.20 per ton net f. o. b. Lorain, paid by Michigan Gas Transmission Corporation for approximately 1,750 tons of 24" O. D. pipe, to a maximum of $64.30 per ton net f. o. b. Lorain, paid by Northern Natural Gas Company

for about 95 tons of 20" O. D. pipe. The weighted average prices developed, therefore, reflect purchases in both small and large amounts, but are influenced primarily by the large tonnage purchases.

The publication, "The Iron Age" shows that the published prices for lapweld steel pipe f. o. b. Pittsburgh District and Lorain, Ohio, mills, remained the same during the period from July 1, 1938, through December 31, 1939, and into part of 1940. According to the written statement of Mr. G. I. Rhodes (page 14 of Exhibit 16-A) the level of material prices during the winter of 1938-1939, which he used, remained substantially the same through the early part of 1940. In view of this it is considered that the prevailing actual prices for steel line pipe during the year 1939 may properly be compared with the quoted prices used in the Hope Natural Gas Company's estimate of reproduction cost new as of December 31, 1938.

This exhibit compares the net quoted prices of line pipe f. o. b. (Pittsburgh District, Youngstown or Lorain) mill as included in Hope Natural Gas Company's Exhibit 16-D, page
8 261, with the weighted average actual purchase price of seamless and electric-weld steel line pipe developed from the purchase records of the five natural gas companies previously mentioned.

The weighted average actual purchase prices of seamless and electric-weld steel line pipe used in compiling the data in this exhibit have not been reduced for the purposes of this exhibit to a price for lapweld steel line pipe, even though it is known that lapweld steel line pipe costs less per ton than comparable seamless and electric-weld steel line pipe. Had such price differential been considered in this exhibit, the comparison would show a greater difference between quoted and actual prices than has been reflected.

9 CONCLUSION

The Hope Company's net quoted price f. o. b. McKeesport, Youngstown, or Lorain (or other parts of Pittsburgh District), for plain end steel line pipe as of December 31, 1938, included in Exhibit 16-D, page 261, is substantially higher than the prices paid for similar steel line pipe by the five natural gas companies previously mentioned. This price difference is shown in detail on Table 1 and can be summarized as follows:

| Description | Line pip |
|---|---|
| 1. Hope Company's net total quoted price f. o. b. mill McKeesport, Youngstown, or Lorain (or other parts of Pittsburgh District) | 85,667,15 |
| 2. F. P. C. net total cost f. o. b. Youngstown and Lorain | 4,207,70 |
| 3. Difference | 1,459,45 |
| 4. Percent difference | 34.6 |

1 **EXHIBIT NO. 73-A.—COMPARISON OF UNIT REPRODUCTION COST NEW PER FOOT FOR THE INSTALLATION (INCLUDING ALL OVERHEADS) OF LINE PIPE USED IN "REPRODUCTION COST NEW OF COMPANY PROPERTIES AS OF DECEMBER 31, 1938" WITH ACTUAL AVERAGE UNIT COSTS AS EXPERIENCED BY HOPE NATURAL GAS COMPANY AND ANOTHER COMPANY DURING YEARS 1937, 1938, 1939, AND 1940, F. P. C. WITNESS BODNER**

## WRITTEN STATEMENT

### INTRODUCTION

This exhibit presents a comparison of the Reproduction Cost New Unit Cost per Foot as of December 31, 1938, for the Installation of new steel line pipe (and casing used as line pipe), sizes $1\frac{5}{16}$" O. D., $1\frac{29}{32}$" O. D. to 26" O. D. included in Company's Exhibit 16-C, pages 107 and 108, Exhibit 16-D, pages 260 and 261, together with Exhibit 16-A, page 35 (showing the undistributed construction costs) with Actual Costs experienced by the Hope Natural Gas Company and the Manufacturers Light & Heat Company, during years 1937, 1938, 1939, and 1940.

Actual pipe line installation costs for the years 1937, 1938, 1939, and 1940 were used in this exhibit for the reason that cost of the pipeline installations just preceding and subsequent to the date of the Company's claimed valuation would be expected to compare most closely with the costs that would be expected to be incurred on date of the estimated reproduction cost valuation submitted by the Company in these proceedings.

2 The cost of installation of pipelines as referred to in this exhibit includes the total cost for all of the Components of Construction Cost for pipelines exclusive of the direct material cost of pipe, couplings, fittings, valves and such materials which remain as a part of the completed construction. Being the cost of construction, it does not contain any costs applicable to the lands or land rights utilized by the pipeline.

Company Exhibit 16A, at pages 22, 23, 24, 25, 29, 30, and 31, the transcript of the oral testimony of Mr. George I. Rhodes at

pages 635, 636, 637, 638, and 730, and the underlying working papers supporting the computation of the average unit installation cost for pipelines, indicate that such units in Exhibit 16C, at pages 107 and 108 for Account 333-1, Field Lines, Exhibit 16D, at pages 260 and 261 for Account 353, Mains, and Exhibit 16A, at page 35 showing additional expenditures related to undistributed construction costs, are not derived from actual pipeline installation costs experienced by the Hope Natural Gas Company translated to reflect costs prevailing during the period of the claimed valuation. An inspection of the working papers
3 underlying these unit costs does not disclose that such costs are derived from or may be related to the installation of any gas pipelines anywhere. Also the Company has not made available for examination any analyses reflecting actual costs of construction of any gas pipelines upon which those costs may have been based or predicated. In addition, no studies showing the derivation of the labor performances, the supervision or the overhead percentages adopted by the Company for any of the components of the installation cost of steel line pipe have been made available.

METHOD

The installation costs for $1\frac{5}{16}$" O. D., $1^{29}\frac{}{32}$" O. D. to 16" O. D. steel line pipe as contained in the 1938 "Reproduction Cost New" estimate of Mr. Rhodes for the Company have been analyzed and are presented in this exhibit in such manner that a direct comparison may be made between the unit cost included in his estimate and the actual costs experienced by the Hope Natural Gas Company and another company. For the purpose of this exhibit it has been unnecessary to consider the composition of the unit costs or relative proportions of the several com-
4 ponents entering into the total cost determined for each size and kind of pipe, but only to segregate the material cost from the installation cost in accordance with the definition given above. Tables 3 and 4 in this exhibit explain the details of the method used in developing the total unit installation costs of steel line pipe included in Mr. Rhodes' Reproduction Cost New estimate in order to make a direct comparison of such units with actual costs.

Actual installation costs and line pipe lengths for the laying of new field and transmission pipelines has been obtained from three sources and are included in this exhibit as follows:

(a) Installation cost data for all new pipelines ($15/16$" O. D. to 16" O. D.) installed in 1937 and 1938 (completed in 1937 and 1938) by the Hope Natural Gas Company were transcribed from the construction cost analyses of the Commission accounting examiners as determined in their study of the "Original Cost of Gas Plant as of December 31, 1938." The pipe footages for the pipelines were transcribed from the equipment cost analyses of the Commission accounting examiners as determined in the above-mentioned exhibit.

5 (b) Installation cost data for all new lines installed in 1939 and 1940 by Hope Natural Gas Company were taken from the closed construction work orders made available by the Company. All costs shown in those work orders, exclusive of direct cost of pipe, valves, fittings, and other materials remaining a part of the completed construction and classified by the Company as equipment cost, were included as installation costs. The pipe footage data were transcribed from the same closed work orders and included the pipe lengths shown for the corresponding direct material costs of pipe.

(c) Installation cost data for all new lines installed between March 1938 and December 1940 by Manufacturers Light & Heat Company in the State of West Virginia were copied from the closed construction work orders of that company made available upon request. The installation costs included all of the costs of construction, exclusive of the direct cost of the pipe, fit-

6 tings, valves and other materials remaining as a part of the completed construction, and of course, exclusive of the cost of lands and rights-of-way acquired for the construction of the lines. The pipe footages were transcribed from the same closed work orders and included the pipe lengths shown for the corresponding direct material costs of pipe.

Some of the materials used in the construction of the pipelines analyzed for this exhibit were secondhand or reused materials recovered from previously constructed lines. Although the cost of installation of pipelines using such secondhand materials would be expected to be greater than that which would be incurred using new materials, this fact has not been reflected in this exhibit.

Replacement and line extension jobs have been omitted in this comparison study to avoid the possibility that costs relating to such construction might be distorted by reason of the character of the work.

In determining the actual costs applicable to the installation of minor footages of line pipe of diameter other than the principal diameter involved in the particular job, an amount was
7 segregated for such footage on the basis of the weighted average installation cost experienced in the period by each company for all of the jobs installed of that single diameter. These costs segregated for the minor footages of pipe were then grouped with those lines of the same diameter.

In determining the footage of pipeline installed, certain quantities of pipe of diameters less than $1^{5}/_{16}$" O. D. (used possibly as gauge lines) and minor footages of $8^{1}/_{4}$" and 10" pipe (probably used as protective casing) charged to the job and included in the cost of the pipeline were omitted. Consequently the actual installation costs per foot developed in this exhibit and used for purposes of comparison are higher than would have been reflected, had these additional footages been considered in arriving at the average actual unit costs. Also a considerable portion of the installation cost data obtained from the Manufacturers Light & Heat Company was for the installation of plain-end line pipe in welded pipelines, the installation costs of which are generally higher than the Dresser coupled pipelines of the Hope Company with which they are compared in columns 9 and 11 of Table 1 in this exhibit.

8 The actual average unit installation costs per foot shown in this exhibit are derived from a consideration and combination of costs for both screw-end and plain-end pipeline construction. Separate actual unit installation costs were not determined for these two classes of construction for the records did not indicate the complete information necessary for such a determination. The records of both the Hope Natural Gas Company and the Manufacturers Light & Heat Company did not segregate the exact footage of plain-end pipe laid as Dresser coupled pipeline from that laid as welded pipeline nor did they specify in all instances whether the pipe used was plain-end or screw-end pipe.

The installation costs for all drip assemblies installed by Hope Natural Gas Company during the years 1937 and 1938 in the pipelines included in this exhibit have been included with the construction cost of the pipeline. The installation costs applicable to drip assemblies are included separately as an additional cost in the Company's Reproduction Cost New estimate. (See transcript of testimony of Mr. Rhodes at pages 732 and 733.)

Had the actual installation costs pertaining to the drip assemblies been determined separately in this exhibit and the amounts applicable thereto deducted from the total installation cost of the pipeline, there would have resulted a lower installation cost per foot for the steel line pipe.

The compilation of actual cost data for new pipeline construction has included all jobs (for $1\frac{5}{16}$" O. D., $1^{29}\frac{}{32}$" O. D. to 16" O. D. pipe) whether large or small, but even in the aggregate the footage does not accumulate to a project the size of that which would be encountered were the properties of Hope Natural Gas Company actually being reconstructed. There are savings incident to a large construction project which are not reflected in this exhibit, because the Company experience in pipeline construction cost is piece-meal.

The inclusion of the additional amounts, claimed by the Company above the "Original Cost of Gas Plant as of December 31, 1938" determined by the Commission accounting examiners for new lines constructed in 1937 and 1938 by Hope Natural Gas Company, would reduce the percentage difference shown in this exhibit on an average of approximately 10%. These Company claims are not considered in this exhibit, but are mentioned to show that if such amounts had been included, still there would be a large remaining difference between the installation costs per foot in Reproduction Cost New estimate and actual experienced costs plus such claimed amounts.

The actual installation cost data compiled from the construction costs analyses (for period 1937 and 1938) as determined by the Commission accounting examiners in their study of the "Original Cost of Gas Plant as of December 31, 1938" of the Company and the closed construction work orders of Hope Natural Gas Company and of Manufacturers Light & Heat Company, was analyzed and summarized. The installation costs so summarized covered more than 135 miles of pipeline construction at an installation cost of approximately $304,000.00. The data transcribed from the several records of Hope Natural Gas Company and the Manufacturers Light & Heat Company, together with the development of the data presented in this investigation, are all available from the working papers underlying this exhibit.

## CONCLUSIONS

As a result of this investigation, Table 1 shows the comparison of estimated reproduction cost new unit cost per foot for the installation of steel line pipe (and casing used as line pipe)
11 of $1\frac{5}{16}$", $1\frac{29}{32}$" to 16" outside diameters, as included in the Reproduction Cost New of Company Properties as of December 31, 1938, with actual costs as experienced by the Hope Company and another company during the years 1937, 1938, 1939 and 1940. The figures in columns (8) and (10) are differences determined by comparing the unit installation costs per foot for screw-end pipe, or the highest unit installation costs for pipe sizes over $4\frac{1}{2}$" O. D. as included by the Company in their reproduction cost new estimate, with the actual installation costs as experienced by the two companies. The figures in columns (9) and (11) are likewise differences determined by comparing the unit installation costs per foot for plain-end Dresser-coupled pipe, or the lowest unit installation costs for pipe sizes over $4\frac{1}{2}$" O. D. as included by Mr. Rhodes in his estimate, with the actual installation costs as experienced by Hope Natural Gas Company and Manufacturers Light & Heat Company.

Table 2 shows the actual weighted average installation cost per foot of steel line pipe (and casing used as line pipe) derived from actual construction costs experienced by Hope Natural Gas Company and Manufacturers Light & Heat Company.

Table 3 shows the development of installation costs per
12 foot for lapweld screw-end steel pipe (and casting used as line pipe) as reflected in Mr. Rhodes' reproduction cost new estimate.

Table 4 shows the development of installation costs per foot for lapweld plain-end Dresser-coupled steel line pipe as included in Mr. Rhodes' estimate of reproduction cost new.

It is manifest from this comparison study that the Company's estimate of pipeline unit installation cost, contained in its Reproduction Cost New exhibit, is strikingly higher than such cost actually experienced by the Hope Natural Gas Company and the Manufacturers Light & Heat Company for recent pipeline construction.

## 1 EXHIBIT NO. 74.—REPORT ON THE "ORIGINAL COST" TRENDED TO 1938 PRICES OF THE PLANT OF HOPE NATURAL GAS COMPANY EXISTING AT DECEMBER 31, 1938, F. P. C. WITNESS GOUGH

[Pages I to V omitted]

The subject of this report is the trending of the Original Cost of the plant of Hope Natural Gas Company existing at December 31, 1938, presented as evidence in this proceeding by Mr. Peter Antonelli of the firm of Ford, Bacon & Davis, Inc., on behalf of the company, in Exhibit No. 20. The trending, which is made to 1938 prices, involves thirty-two plant accounts of the company with an original cost per books of $52,730,665, that was revised to $69,735,637, and then trended to $105,101,912. The purpost in examining the trending was to learn exactly by what means it was effected and to ascertain whether the results obtained were in any sense an indication of the fair value of the company's property.

The problem of investigating the trending was attacked by means of a close study of several of the larger accounts. This approach proved preferable to an examination of all plant accounts for it made feasible an extensive study of the important few. Pursuant to this plan, basic data underlying Exhibit No. 20, chiefly as they relate to the three largest accounts, were analyzed. This procedure provided material with which
2 the results of the trending process could be tested and interpreted and, it provided that material from the very source from which the trended results themselves were obtained.

The results of the examination led to the positive conclusion that the methods and processes used in the trending are without merit and that the amount of $105,101,912 developed and set forth in Exhibit No. 20 as the product of that trending should in nowise serve as a criterion for the purpose of determining the fair value of the plant of Hope Natural Gas Company.

To aid in the presentation of the subject matter of this report, the analyses and interpretations of the plant accounts are preceded by a section entitled "Exhibit No. 20," which is a general exposition of the method of trending used in that Exhibit.

## Exhibit No. 20

Exhibit No. 20 presents a revision of the Original Cost of the plant of Hope Natural Gas Company as at December 31, 1938, and a trending of that revised cost to 1938 prices. By the revision, the Original Cost of plant per the company's books amounting to $52,730,665 was raised to $69,735,637 and by the trending that $69,735,637 was raised to $105,101,912. This report deals only with the trending, by means of which the revised Original Cost was increased $35,366,275; it does not take
3 up the matter of the revision of Original Cost. That question and the question of whether the dollars of Original Cost as revised have been properly assigned to the years when the property they represent was installed are separate and apart from the subject of this report.

Reference in this report to Original Cost unless otherwise clearly indicated by the context is to Original Cost as revised in Exhibit No. 20.

*The Method of Trending.*

The purpose of trending the Original Cost of the company's plant as revised was to determine how much it would cost to build the company's properties existing at December 31, 1938, on the assumption that that property would be built just as it actually was built, at present price levels (1938 prices) (T. 1537). This supposition, implying the slower, more laborious construction methods of the past priced on a time basis, at the higher wage-rates of 1938, and the lower material costs of yester-year priced at 1938 levels, was bound to produce a trended cost much greater in amount than the Original Cost, and it did. The Original Cost of all but one of the company's thirty-two plant accounts was trended higher, and the trending of the exception reduced its Original Cost only $3,583, or less than one percent. The over-all effect of the trending as indicated above produced an amount 50 percent greater than the amount of Total Original Cost as revised.

4 The method by which the trending was accomplished may be said to consist of three steps. They are the division of the Original Cost of each account into the documents thereof representative of the plant installed in each year; the development of a series of trend factors for each account, one for each year; and the translation of Original Cost into what is purported to be its 1938 equivalent, by means of the trend factors. The

first step, as indicated on page 3 above, is not treated in this report and the third step, since it is merely a mathematical calculation accomplished by dividing Original Cost by the trend factors, requires as such, no comment. The second step, the development of the trend factors, is the point of scrutiny and only upon the development of these factors and the implications in their use does this report focus attention. The effect of the application of the trend factors upon all of the company's accounts is most readily perceived from a review of Statement B of Exhibit No. 20 which contains a summary of the trending of all these accounts.

*The Trending by Accounts.*

Statement B (pp. 31–32, Exhibit No. 20) reveals that $35,098,442, or more than 99 percent of the total excess of Original Cost Trended over Original Cost amounting to $35,366,275, is to be found in eight of the thirty-two plant accounts trended and, moreover, that these eight accounts include more than 90 percent of the Original Cost that was trended. The amounts for these accounts, taken from Statement B, are enumerated in Table 1 which follows.

TABLE 1.—*Original cost trended, original cost and excess of original cost trended over original cost of the eight largest plant accounts and of all plant accounts as at Dec. 31, 1938.*

| Name of account | Original cost trended (Exhibit No. 20) | Original cost (Exhibit No. 20) | Excess of original cost trended over original cost |
|---|---|---|---|
| Producing gas wells: | | | |
| Construction | $34,384,320 | $17,783,637 | $16,600,683 |
| Equipment | 10,663,983 | 8,168,191 | 2,495,792 |
| Field lines: | | | |
| Construction | 7,038,970 | 4,076,871 | 2,962,099 |
| Equipment | 10,505,272 | 8,279,885 | 2,225,387 |
| Mains: | | | |
| Construction | 9,684,569 | 5,266,108 | 4,418,461 |
| Equipment | 13,360,169 | 10,225,450 | 3,134,719 |
| Compressor station structures | 2,498,445 | 1,811,605 | 686,840 |
| Compressor station equipment | 11,536,967 | 8,644,011 | 2,892,956 |
| | 99,672,298 | 64,255,760 | 35,416,538 |
| Less: Property in the 8 accounts listed above that is used to transport coke-oven gas | 1,100,075 | 781,979 | 318,096 |
| Portion of total plant (exclusive of property used to transport coke-oven gas) included in the 8 accounts listed above | 98,572,223 | 63,473,781 | 35,098,442 |
| Total plant (exclusive of property used to transport coke-oven gas) | 105,101,912 | 69,735,637 | 35,366,275 |

Source: Statement B, Exhibit No. 20.

6 Of the eight accounts listed in Table 1, three, namely, the Gas Well, Field Lines, and Mains Construction accounts consist almost entirely of labor costs; three, namely, the Gas Wells, Field Lines, and Mains Equipment accounts consist almost entirely of material costs; and two, Compressor Station Structures and Compressor Station Equipment consist of both labor and material costs. The amounts in the tabulation clearly indicate that the three Construction accounts were trended relatively much higher than the three Equipment accounts for the same classes of property. The increase in the Construction accounts by trending was 89 percent, while the increase in the Equipment accounts was only 29 percent. The excess of Original Cost Trended over Original Cost for the three Construction accounts amounting to $23,981,263 comprises about two-thirds of the excess of all thirty-two accounts, amounting to $35,366,275.

Three of the eight plant accounts listed in Table 1 were chosen for detailed study: Producing Gas Wells—Well Construction, Mains—Construction, and Mains—Equipment. They were selected because they constitute the largest Construction and Equipment accounts and represent in themselves a large part of total plant. Combined they contain nearly one-half of all Original Cost that was trended and embrace $24,153,863 of the total Excess of Original Cost Trended over Original Cost. A section of this report is devoted to each of them.

7 PRODUCING GAS WELLS—WELL CONSTRUCTION

The Producing Gas Wells—Well Construction Account is of outstanding importance in this examination because it is the largest of the company's plant accounts and was trended to an amount greatly in excess of the Original Cost of the property it represented. From an Original Cost of $17,783,637, it was trended to $34,384,320, an amount $16,600,683 or 93 percent in excess of that Original Cost. The trending was done by the application of factors based entirely on wage-rates. Charges to the account consist of the labor cost of drilling wells and other costs incident to that operation, such as teaming, rig-costs, and torpedoes.

Two studies of this account were made: an analysis of well drilling costs and an analysis of Original Cost as shown in Exhibit No. 20. The analysis of well drilling costs covers the years 1904–15, and 1938, and the analysis of Original Cost, the years

1896-1900, 1911-15, 1937, and 1938. In both studies the ratio that the costs of earlier years bear to the costs of 1938 were developed and compared with the trend factors used in Exhibit No. 20.

Since well drilling costs constitute the major part of all costs charged to the Well Construction Account, the studies to the extent that they cover the same years may be said to be a duplication, and in a sense they are. Both were undertaken so that
8 comparisons from two sets of data might be made. Results for the years 1911-15, which are the years covered by both studies, are similar, as might be expected. The well drilling costs per foot for that period were 59.6 percent of those costs for the year 1938 and the corresponding ratio developed from the analysis of Original Cost was 60.0 percent. The proximity of these percentages indicates a close correlation between the cost per foot for drilling and the cost per foot for all charges applicable to the account.

The Original Cost of Well Construction like the Original Cost of all other plant accounts trended in Exhibit No. 20 was divided into the amounts thereof installed in each of the years during the period in which the plant that it represents was built. For Well Construction this period extends back forty-eight years, from 1938 to 1891, and part of the Original Cost of that account was installed in every one of those years. To each of these forty-eight subdivisions of the Original Cost of Well Construction a trend factor was applied to convert it into what purported to be its 1938 equivalent. This application and the resultant Original Cost Trended are shown on pages 66 and 67 of Exhibit No. 20. The conversion was accomplished simply by dividing each yearly amount of Original Cost by its trend factor.

*The Development of the Trend Factors.*

The factors used to trend Well Construction in Exhibit No. 20 for the years prior to 1906 were derived from the hourly
9 wage-rates for Common Laborers, the only wage-rates available for those years, and for the years 1906 to 1938 from the hourly wage-rates for Drillers and Tool Dressers weighted equally, one and one. The wage-rates are those paid by the company (See pp. 55-6, Exhibit No. 20). For example, the trend factor of 38.2 which was used to trend Original Cost installed in 1911 is a composite of one-half the sum of 39.96 and 36.49, the trend ratios for Driller and Tool Dresser, respectively, for 1911. These ratios are the percent which the 1911

hourly wage-rates of Driller and Tool Dresser bear to their 1938 wage-rates.

Since the trend factors of Exhibit No. 20 are really the ratios that the hourly wage-rates of early years bear to the hourly wage-rates of 1938, the division of the amount of Original Cost by them, which is carried out in that Exhibit, translates the Original Cost into the amount the property would have cost to construct had it been installed in the number of hours in which it actually was installed, paid for at the hourly wage rates prevalent in 1938. Virtually the resultant Original Cost Trended is the product of the hourly wage-rate of 1938 multiplied by the man-hours expended in earlier years; it represents the hourly wage-rates of the 40-hour week (or 176-hour month) of 1938 multiplied by the man-hours of the 72-hour week (or 312-hour month) of the past. (See Column 2, Appendix B, which is a copy of working papers that support Exhibit No. 20.) It is the capitalization of the weekly or monthly time of Drillers and Tool Dressers, who until 1924 worked 72 hours a week, in amounts that are as much as 77 percent higher than the amounts they received per week or per month in 1938. It is a capitalization of man-hours without regard to what was accomplished in those hours.

*Well Drilling Costs.*

The greater part of Original Cost of Producing Gas Wells—Well Construction, existing at December 31, 1938, probably about 70 percent of it, consisted of well drilling costs, and for this reason and the fact that the remainder of the costs were incident to the drilling costs, the entire account was trended in Exhibit No. 20 with factors derived from hourly wage-rates for drillers and tool dressers whose wages comprise well drilling costs. Accordingly, the average price per foot to drill affords a safe and convenient gauge with which to measure the trueness of the factors used to trend the account in Exhibit No. 20.

*Depth of Wells and Cost to Drill.*

Most of the company's well drilling was done under contract let by bid either to independent drillers or to the company's own well drilling department, on a "price per foot" basis, and a list of the costs incurred under certain of these contracts for certain years was available. This list which is reproduced in this report as Appendix C gives the depth in feet to which wells were drilled and the price paid per foot to drill them. These figures were

studied, first, to determine the variation each year in the
11 depth of drilling and in the price per foot to drill and then, to ascertain the effect, if any, that variation in the depth of drilling had upon price per foot to drill. It was important to confirm the fact that drilling conditions in each of the ... years were reasonably uniform, for that uniformity was a prerequisite to the next step in the study, the development of drilling cost ratios.

Table 2, and the data underlying it, which are reproduced in this report in Appendix C, show clearly that wells were drilled to fairly uniform depths during the years compared, and that drillings were within such a narrow depth range that the price per foot to drill was not appreciably affected. For example, the deepest well drilled in 1938, to a depth of 4,503 feet cost $1.75 per foot to drill, although one of the shallowest wells drilled in that year, to a depth of only 1,642 feet, cost $2.50 per foot to drill. The cost of the wells listed in Appendix C indicates that depth was not an important determinant of the price per foot to drill.

12 TABLE 2.—*Well construction—Drilling statistics for the years 1904–05, 1906–10, 1911–15, and 1938*

| | 1904–05 | 1906–10 | 1911–15 | 1938 |
|---|---|---|---|---|
| Basis for comparative statistics shown below: | | | | |
| Number of wells drilled | 10 | 25 | 73 | 26 |
| Number of feet drilled | 26,734 | 60,442 | 177,576 | 65,668 |
| Cost of drilling, per foot: | | | | |
| Highest price | $1.35 | $1.40 | $1.30 | $2.50 |
| Lowest price | $1.10 | $1.10 | $1.00 | $1.45 |
| Weighted average price | $1.23 | $1.20 | $1.15 | $1.93 |
| Depth drilled, in feet: | | | | |
| Deepest drilling | 3,054 | 3,094 | 3,214 | 4,503 |
| Shallowest drilling | 1,848 | 1,267 | [1] 940 | 1,575 |
| Average drilling | 2,673 | 2,418 | 2,432 | 2,526 |

[1] The next shallowest drilling was 1,304 feet.

13 The ratios which the prices per foot to drill in the 1904–05, 1906–10, and 1911–15 periods bear to the price per foot to drill in 1938 are compared in Table 3 with the highest and lowest trend factors used in Exhibit No. 20 for years in those periods. This comparison shows unmistakably that the trend factors used in Exhibit No. 20 are much lower than they would be if they were predicated upon the cost to produce units of property rather than upon hourly wage rates only. The price-per-foot ratios were developed from the weighted average prices shown on Table 2.

14 TABLE 3.—*Producing gas wells—Well construction—A comparison of the trend factors used in Exhibit No. 20 for the years 1904–05, 1906–10, 1911–15, and 1938 with ratios based on well drilling costs for those years*

| Years | Trend factors used in Exhibit No. 20 (1938=100.0) | | Ratio of average price per foot for well drilling (1938=100.0) |
|---|---|---|---|
| | Highest | Lowest | |
| 1904–05 | 33.1 | 31.1 | 63.7 |
| 1906–10 | 37.6 | 35.6 | 62.2 |
| 1911–15 | 40.2 | 38.2 | 59.6 |
| 1938 | 100.0 | 100.0 | 100.0 |

15 *Analysis of Original Cost.*

Although the well drilling cost tests, by inference, lead to the conclusion that man-hours for years prior to 1938, which were priced at 1938 hourly wage-rates in Exhibit No. 20, were less productive than 1938 man-hours, ultimate proof of the correctness of that conclusion really is to be found in an analysis of the Original Cost of Well Construction itself. Such an analysis was undertaken to establish that fact incontrovertibly.

A complete analysis of the Original Cost of the Well Construction Account was neither necessary nor feasible. It would have been a most lengthy task. Instead, two periods of five years each were chosen for analysis, the years 1896 to 1900, and 1911 to 1915, inclusive. Originally, the later period was selected because the amount of Original Cost installed in that period and existing at December 31, 1938; was sufficiently large to be representative of the account and also because the period was one of normal construction conditions. Moreover, its remoteness to 1938 gave full play to the very circumstances of the trending process sought to be exposed. Later, the 1896–1900 period was analyzed to widen the range of the period tested and to afford proof that the results of the analysis of the period first tested were not exceptional.

The aim in making this analysis was to determine the man-hour productivity of labor during the periods analyzed and it was accomplished in four steps. The cost of Well Construction
16 exclusive of Overheads was segregated from the total Original Cost of that construction; the number of feet of construction which that cost represented was tabulated; the cost of Construction exclusive of Overheads was divided by the amount of the average hourly wage-rates used in the trading process (Exhibit No. 20), thus developing the number of man-hours ex-

pended on the construction; and, finally, the number of feet of construction was divided by the man-hours expended to determine the number of feet of Well constructed per man-hour.

In order to present a comparison of the man-hour productivity and costs of the earlier years with those of 1938, the year to which Original Cost was trended in Exhibit No. 20, an analysis of 1938 costs similar to the analysis made for the earlier period also had to be and was undertaken. It was supplemented by an analysis of costs for 1937, which had been given the same value for trending purposes in Exhibit No. 20 as those of 1938, viz., 100.0, for the reason that the 1938 Construction alone did not provide a great amount of construction experience.

The amounts of Original Cost for the years that were analyzed and the amounts to which they were trended are reproduced from Exhibit No. 20 in Table 4.

17 TABLE 4.—*Producing gas wells—Well construction—Original cost and original cost trended per Exhibit No. 20, pages 66 and 67, 1896–1900, 1911–15, 1937, and 1938*

| Year first placed in public service | Original cost | Trended to 1938 prices (1938=100.0) | Original cost trended to 1938 prices |
|---|---|---|---|
| (A) | (B) | (C) | (D) (B divided by C) |
| 1896 | $16,621.49 | 27.8 | $59,789.53 |
| 1897 | 24,765.33 | 27.8 | 89,083.92 |
| 1898 | 9,619.62 | 27.8 | 34,602.95 |
| 1899 | 76,100.49 | 27.8 | 273,742.77 |
| 1900 | 106,957.23 | 31.1 | 343,913.87 |
| | 234,064.16 | | 801,133.04 |
| 1911 | 667,745.80 | 38.2 | 1,747,947.11 |
| 1912 | 609,543.22 | 38.2 | 1,595,662.86 |
| 1913 | 818,211.69 | 40.2 | 2,035,352.44 |
| 1914 | 800,037.39 | 40.2 | 1,990,142.99 |
| 1915 | 579,832.99 | 40.2 | 1,442,370.60 |
| | 3,475,341.06 | | 8,811,475.67 |
| 1937 | 163,530.10 | 100.0 | 163,530.10 |
| 1938 | 253,069.59 | 100.0 | 153,069.59 |

18 The analysis of Original Cost for the years enumerated in Table 4 was made from the company's "Well Construction Record" which gives the depth and cost of construction of each well. A summary of the results of the analysis by years showing Well Construction Costs divided into five classifi-

cations is presented in Table 5. The analysis discloses that mo
than nine-tenths of total Original Cost is in the two classificatio
that cover drilling operations, namely, Original Drilling an
Drilling Deeper, and it was made particularly to ascertain th
amount of direct costs applicable to each of these two oper
tions.

19 TABLE 5.—*Producing gas wells—Well construction—Analysis of ori
inal cost per Exhibit No. 20, 1896–1900, 1911–15, 1937, and 1938*

| Year | Original drilling exclusive of overheads [1] | Drilling deeper exclusive of overheads [1] | Adjustments for change in equipment | Overheads | Purchased from nonutility | Total origin cost (exhib No. 20) |
|---|---|---|---|---|---|---|
| 1896 | $16,621.49 | | | | | $16,621. |
| 1897 | 23,396.79 | $1,368.54 | | | | 24,765. |
| 1898 | 9,057.08 | 562.54 | | | | 9,619. |
| 1899 | 42,469.28 | | $833.91 | $33.79 | $34,431.33 | 76,100. |
| 1900 | 95,693.61 | | 755.96 | 392.09 | 11,627.48 | 106,957. |
| 1911 | 594,521.77 | 32,609.08 | 4,278.86 | 34,717.18 | 10,146.03 | 667,715. |
| 1912 | 573,598.10 | 12,355.11 | 5,629.86 | 29,193.11 | 26.76 | 609,543. |
| 1913 | 755,865.14 | 22,263.65 | 6,844.48 | 38,955.19 | 7,972.19 | 818,211. |
| 1914 | 729,261.77 | 29,872.25 | 5,068.78 | 38,195.30 | 7,776.22 | 800,037. |
| 1915 | 479,850.19 | 54,289.09 | 1,328.65 | 32,329.82 | 14,692.54 | 579,832. |
| 1937 | 115,040.72 | 25,124.37 | 4,506.45 | 18,002.74 | 845.82 | 163,520. |
| 1938 | 114,721.81 | 12,973.30 | 5,029.56 | 15,680.75 | 4,664.17 | 153,069. |

[1] The amounts shown in this column for the years 1896 to 1900 include the cost of a number of we
drilled for other companies, for which the overheads could not be determined and segregated.

20 *Man-Hour Productivity.*

With direct labor costs and number of feet drilled avail
able from the analysis of Original Cost, both for Original Drillin
and Drilling Deeper, it was possible by the use of the wage rate
used in developing the trend factors of Exhibit No. 20 to obtai
the number of man-hours expended in each year and consequentl
the number of feet of Well constructed per man-hour. The man
hours expended, relating as they do to all the direct costs of Wel
Construction, embrace not only the drilling operation but th
installation of casing and tubing as well. These computation
are shown in Tables 6 and 7 which also show the average per
formance for each year translated into the ratio it bears to 193
performance.

21 TABLE 6.—*Producing gas wells—Well construction—Determination of number of feet of original drilling drilled per man-hour in the years 1896–1900, 1911–15, 1937, and 1938*

| Year | Cost of original drilling exclusive of overheads (table 6) | Average hourly wage rates (Appendix D) | Man-hours expended | Feet of original drilling | Feet of original drilling drilled per man-hour | Ratios of man-hour productivity (1938=100.0) |
|---|---|---|---|---|---|---|
| (A) | (B) | (C) | (D) (B÷C) | (E) | (F) (E÷D) | (G) |
| 1896 | $16,621.49 | $0.287 | 57,914 | 8,938 | 0.1543 | 38.8 |
| 1897 | 23,396.79 | .287 | 81,521 | 13,104 | .1607 | 40.5 |
| 1898 | 9,057.08 | .287 | 31,557 | 4,974 | .1576 | 39.7 |
| 1899 | 42,469.28 | .287 | 147,976 | 24,166 | .1633 | 41.1 |
| 1900 | 95,693.61 | .322 | 297,185 | 59,083 | .1988 | 50.1 |
| 1911 | 504,521.77 | .396 | 1,501,318 | 353,725 | .2356 | 59.3 |
| 1912 | 575,398.10 | .396 | 1,448,480 | 343,376 | .2371 | 59.7 |
| 1913 | 755,865.14 | .416 | 1,816,983 | 437,257 | .2406 | 60.6 |
| 1914 | 729,261.77 | .416 | 1,753,033 | 450,457 | .2569 | 64.7 |
| 1915 | 479,850.19 | .416 | 1,153,486 | 313,577 | .2719 | 68.5 |
| 1937 | 115,940.72 | 1.064 | 108,120 | 47,701 | .4411 | 111.1 |
| 1938 | 114,721.81 | 1.074 | 106,817 | 42,438 | .3972 | 100.0 |

22 TABLE 7.—*Producing gas wells—Well construction—Determination of number of feet of "drilling deeper" drilled per man-hour in the years 1896–1900, 1911–15, 1937, and 1938*

| Year | Cost of drilling deeper exclusive of overheads (table 6) | Average hourly wage rates (Appendix D) | Man-hours expended | Feet of drilling deeper | Feet of drilling deeper drilled per man-hour | Ratios of man-hour productivity (1938=100.0) |
|---|---|---|---|---|---|---|
| (A) | (B) | (C) | (D) (B÷C) | (E) | (F) (E÷D) | (G) |
| 1896 | | $0.287 | | | | |
| 1897 | $1,368.54 | .287 | 4,768 | 860 | 0.1804 | 69.1 |
| 1898 | 562.54 | .287 | 1,960 | 311 | .1587 | 60.8 |
| 1899 | | .287 | | | | |
| 1900 | | .322 | | | | |
| 1911 | 32,609.08 | .396 | 82,346 | 11,720 | .1423 | 54.5 |
| 1912 | 12,355.11 | .396 | 31,199 | 6,382 | .2045 | 78.4 |
| 1913 | 22,263.65 | .416 | 53,518 | 10,859 | .2029 | 77.7 |
| 1914 | 29,872.25 | .416 | 71,808 | 11,267 | .1569 | 60.1 |
| 1915 | 54,289.09 | .416 | 130,502 | 18,115 | .1388 | 53.2 |
| 1937 | 25,124.37 | 1.064 | 23,613 | 5,014 | .2123 | 81.3 |
| 1938 | 12,973.30 | 1.074 | 12,079 | 3,153 | .2610 | 100.0 |

23 These two tables definitely show that the man-hours of years prior to 1938 were less productive than the man-hours of 1938. It is particularly notable that a steady improvement in man-hour productivity is discernible for Original Drilling during the years of the two five-year periods for which the volume of work done provides truly representative ratios.

A series of ratios that reflect not only increases in the ho
wage-rates but increases in the hourly productivity as wel
shown in Tables 6 and 7, has been computed and is presente
Table 8. These ratios are predicated upon the cost per foo
construct, a unit which automatically gives weight both to w
rate and productivity factors. The cost per foot was determ
by dividing the Original Cost of Well Construction at Dece
31, 1938, installed in each of the years shown, by the numbe
feet that that Original Cost represents, as determined from
Well Construction Record used in the analysis of Original C
The comparison of these ratios with the trend factors used in
hibit No. 20 (CF. page 17) is illuminating.

24 TABLE 8.—*Producing gas wells—Well construction—Determination of original drilling, drilling deeper, and combined costs per foot, exclusive of overheads, for the years 1896–1900, 1911–15, 1937, and 1938*

| Year | Original drilling | | | | Drilling deeper | | | | Combined | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Cost (table 6) | Feet | Cost per foot | Ratio of cost per foot (1938=100.0) | Cost (table 6) | Feet | Cost per foot | Ratio of cost per foot (1938=100.0) | Cost | Feet | Cost per foot | Ratio of cost per foot (1938=100.0) |
| (A) | (B) | (C) | (D) (B÷C) | (E) | (F) | (G) | (H) (F÷G) | (I) | (J) (B+F) | (K) (C+G) | (L) (J÷K) | (M) |
| 1896 | $16,621.49 | 8,938 | $1.86 | 68.9 | | | | | $16,621.49 | 8,938 | $1.86 | 66.4 |
| 1897 | 23,396.79 | 13,104 | 1.78 | 65.9 | $1,368.54 | 860 | $1.59 | 38.7 | 24,765.33 | 13,964 | 1.77 | 63.2 |
| 1898 | 9,057.08 | 4,974 | 1.82 | 67.4 | 562.54 | 311 | 1.81 | 44.0 | 9,619.62 | 5,285 | 1.82 | 65.0 |
| 1899 | 42,469.28 | 24,166 | 1.76 | 65.1 | | | | | 42,469.28 | 24,166 | 1.76 | 62.9 |
| 1900 | 95,693.61 | 59,083 | 1.62 | 60.0 | | | | | 95,693.61 | 59,083 | 1.62 | 57.9 |
| 1896–1900 | 187,238.25 | 110,265 | 1.70 | 63.0 | 1,931.08 | 1,171 | 1.65 | 40.1 | 189,169.33 | 111,436 | 1.70 | 60.7 |
| 1911 | 594,521.77 | 353,725 | 1.68 | 62.2 | 32,609.08 | 11,720 | 2.78 | 67.6 | 627,130.85 | 365,445 | 1.72 | 61.4 |
| 1912 | 573,598.10 | 343,376 | 1.67 | 61.9 | 12,355.11 | 6,382 | 1.94 | 47.2 | 585,953.21 | 349,758 | 1.68 | 60.0 |
| 1913 | 755,865.14 | 437,257 | 1.73 | 64.1 | 22,263.65 | 10,859 | 2.05 | 49.9 | 778,128.79 | 448,116 | 1.74 | 62.1 |
| 1914 | 729,261.77 | 450,457 | 1.62 | 60.0 | 29,872.25 | 11,267 | 2.65 | 64.5 | 759,134.02 | 461,724 | 1.64 | 58.6 |
| 1915 | 479,850.19 | 313,577 | 1.53 | 56.6 | 54,289.09 | 18,115 | 3.00 | 73.0 | 534,139.28 | 331,692 | 1.61 | 57.5 |
| 1911–15 | 3,133,096.97 | 1,898,392 | 1.65 | 61.1 | 151,389.18 | 58,343 | 2.59 | 63.0 | 3,284,486.15 | 1,956,735 | 1.68 | 60.0 |
| 1937 | 115,040.72 | 47,701 | 2.41 | 89.2 | 25,124.37 | 5,014 | 5.01 | 121.9 | 140,165.09 | 52,715 | 2.66 | 95.0 |
| 1938 | 114,721.81 | 42,438 | 2.70 | 100.0 | 12,973.30 | 3,153 | 4.11 | 100.0 | 127,695.11 | 45,591 | 2.80 | 100.0 |

Next to Producing Gas Wells—Well Construction, Mains-Construction is the largest of the property accounts consisting chiefly of labor costs. Primarily, it contains the cost of labor for laying mains and certain other costs incident to that operation, such as teaming and freight. From an Original Cost of $5,266,108 it was trended to $9,684,569, an amount $4,418,461 or 84 percent in excess of that Original Cost.

In preparing analyses and in making comparisons of Mains-Construction two things were kept in mind: that lines consisted of pipe of several dimensions and that they had been laid under varying conditions, such as soil and terrain conditions, not to mention others. These obstacles were overcome by making comparisons by pipe size, and for those sizes only for which there was sufficient footage to assure typical average costs.

Two studies were made: one embracing 1,400,315 feet of main installed, based upon an analysis of the Original Cost shown in Exhibit No. 20 for the years 1911–15 and 1936–38, and the other embracing 3,294,595 feet, based upon typical construction in three sizes of main for the years 1898–1938. To the extent that both studies cover main in plant existing at December 31, 1938, they overlap. The first study is an analysis and comparison of amounts of Original Cost that were trended in Exhibit No. 20; the
26 second is an analysis and comparison of all typical installations in three sizes of main over a long period of years, including both main that was and was not in plant as of December 31, 1938.

*The Development of the Trend Factors.*

Similar to Well Construction, in that it is made up of labor costs, Mains-Construction was trended in the same way as that account, by the use of trend factors developed from hourly wage-rates. The method employed has been analyzed and compared in this report in the same manner that the method employed for Well Construction has been analyzed and compared, and for the same general purpose.

The factors used in Exhibit No. 20 to trend Mains-Construction were derived for the years prior to 1906 from hourly wage-rates for common labor, the only wage-rates available for those years, and for the years 1906 to 1938 from hourly wage-rates for roustabouts and laborers. The factors for 1906 and subsequent

years were obtained by weighting the hourly wage-rates, as found on the company's books, of one roustabout and four laborers. (See pp. 55–6, Exhibit No. 20.) For example, the factor of 40.4 which was used to trend Original Cost installed in 1911 is a composite of one-fifth of 39.01 and four-fifths of 40.80, the trend factors for roustabout and laborer, respectively, for 1911. (See Appendix E and F.) These factors are the ratio that the 1911 hourly wage-rates of roustabout and laborer bear to the 1938 wage-rates for those types of labor. Having been trended
27 in the same manner that Well Construction was trended, the Original Cost of Mains-Construction trended represents, as the Original Cost of Well Construction trended does, the capitalization of man-hours of bygone years at 1938 labor rates.

*Analysis of Original Cost.*

The analysis of Original Cost of Mains-Construction for the years 1911–15 and 1936–38 was undertaken for the purpose of making a comparison of the man-hour productivity and the cost per foot to lay mains in two periods. The amounts of that Original Cost analyzed and the amounts to which they were trended in Exhibit No. 20 are shown in Table 9. Their classification into Direct Costs and Overheads are shown in Table 10.

28 TABLE 9.—*Mains—Construction—Original cost and original cost trended per Exhibit No. 20 (p. 82), for the years 1911–15, 1936, 1937, and 1938.*

| Year first placed in public service | Original cost | Trend to 1938 prices (1938 = 100.0) | Original cost trended to 1938 prices |
|---|---|---|---|
| (A) | (B) | (C) | (D) (B÷C) |
| 1911 | $235,578.12 | 40.4 | $583,114.15 |
| 1912 | 8,866.88 | 40.6 | 21,839.61 |
| 1913 | 342,213.67 | 41.7 | 820,656.26 |
| 1914 | 4,534.52 | 41.3 | 10,979.47 |
| 1915 | 13,499.97 | 41.8 | 32,296.57 |
| | 604,693.16 | | 1,468,886.06 |
| 1936 | 671,024.71 | 88.1 | 761,662.55 |
| 1937 | 113,713.37 | 100.0 | 113,713.37 |
| 1938 | 3,563.97 | 100.0 | 3,563.97 |
| | 788,302.05 | | |

29 TABLE 10.—*Mains—Construction—Original cost per Exhibit No. 20 subdivided into direct costs and overheads for the years 1911–15, 1936, 1937, and 1938*

| Year | Direct costs | Overheads | Total |
|---|---|---|---|
| 1911–15 | [1] $580,155.05 | $25,581.31 | $604,693.16 |
| 1936 | 612,268.75 | 58,755.96 | 671,024.71 |
| 1937 | 104,295.89 | 9,417.48 | 113,713.37 |
| 1938 | 3,313.45 | 250.52 | 3,563.97 |
| 1936–38 | 719,878.09 | 68,423.96 | 788,302.05 |

[1] Includes $1,043.20 for lines installed prior to 1911 and $87,798.07 for property purchased from a predecessor.

30 *Man-Hour Productivity.*

Table 11 shows the direct costs of the 1911–15 and 1936–38 periods for 10-, 12-, 16-, and 20-inch main with the footage of installation for each size. The direct costs of these sizes comprise about 97 percent of the total direct costs for each period. This table also shows the number of feet of main, by sizes, installed per man-hour during each of the two periods, and the ratio of the man-hour productivity in the 1911–15 period to man-hour productivity in the 1936–38 period. The number of feet installed per man-hour was obtained by dividing the number of feet installed by the number of man-hours expended on their installation, and the number of man-hours expended, by dividing direct costs by the average hourly wage rates for Mains-Construction as determined from the working papers of Exhibit No. 20. The man-hour productivity of three years, 1936–38, rather than the productivity of 1938 alone was compared with the 1911–15 man-hour productivity for the reason that the amount of Original Cost installed in 1938, being only $3,563, does not afford adequate performance experience.

The comparisons for all four dimensions of pipe indicate greater man-hour productivity in the later period.

TABLE 11.—*Mains—Construction—Determination of feet of main installed per man-hour in the years 1911–15 and 1936–38*

| Period | Dimension of main in inches | Year installed | Original cost exclusive of overheads—direct costs (table 12) | Average hourly wage rates (Appendix G) | Man-hours expended | Feet of main installed | Feet of main installed per man-hour | Rate of man-hour productivity (1936–38 = 100.0) |
|---|---|---|---|---|---|---|---|---|
| (A) | (B) | (C) | (D) | (E) | (F) (D÷E) | (G) | (H) (G÷F) | (I) |

33 Having developed the number of feet of main installed per hour, it was next sought to determine the cost per foot to install main of each size. This is done in Table 12 by dividing the average hourly wage rates by the number of feet installed per hour.

The hourly wage rates used for the 1911–15 period in Table 12 are the weighted averages derived from the five annual rates used to develop the trend factors of Exhibit No. 20. The hourly wage rate used for 1938 in that table, i. e., $0.564, is the 1938 wage rate used to develop the trend factors of Exhibit No. 20, corrected to include social security taxes for that year. (See Appendix G.) The 1938 costs are based upon the man-hour productivity of 1936, 1937, and 1938, at 1938 wage rates, the performance of three years being used because Mains-Construction in 1938 was only $3,563, which was inadequate for the purpose of developing typical costs. The cost per foot to install main in the 1911–15 period is best compared with the 1938 cost by means of the ratios in Column F. These ratios, unlike the trend factors used in Exhibit No. 20 which are based on hourly wage rates only, reflect not only hourly wage rates but man-hour productivity as well.

34 TABLE 12.—*Mains—Construction—Determination of cost to install 10-, 12-, 16-, and 20-inch main per foot, exclusive of overheads, for the years 1911–15 and 1938*

| Period | Main dimension in inches | Average hourly wage rates (table 33) | Feet installed per hour (table 13) | Cost to install per foot | Ratio of cost per foot (1938=100.0) |
|---|---|---|---|---|---|
| (A) | (B) | (C) | (D) | (E) (C÷D) | (F) |
| 1911–15 | 10 | $0.225 | 0.3521 | $0.6390 | 74.8 |
| | 12 | .220 | .3027 | .5446 | 63.8 |
| | 16 | .227 | .2093 | 1.0845 | 90.2 |
| | 20 | .222 | .2005 | 1.1067 | 93.4 |
| 1938 | 10 | .564 | 1.0219 | .5520 | 100.0 |

| | 16 | .564 | 1.4734 | 1.1980 | 100.0 |
| | 20 | .564 | 1.2994 | 1.3844 | 100.0 |

[1] Performance of 1936, 1937, and 1938 used for purpose of comparison.

35 *Analysis of $3,244,145 of Typical Construction.*

The second study of Mains-Construction is based upon an analysis of large, typical installations of 10-, 12-, and 20-inch main. These sizes were chosen for analysis because they represent a predominant amount of the footage and cost in the Mains-

Construction Account. The jobs analyzed represent $3,244,145 of costs and 3,294,595 feet of main. The analysis was made from data contained in the company's Mains Lines Inventory Ledger. It includes all large typical installations undertaken during the period of the company's existence from 1898 to 1938, inclusive.

The study was made simply to determine whether the number of feet of main laid per man-hour was greater or less in recent years than it had formerly been. To reach a sound conclusion in this matter an analysis of a great many feet of installation had to be made, for a true trend in productivity could be clearly established only by comparisons based on great quantities of installation. The requirement was met by analyzing all large, typical construction jobs of the three sizes of main most frequently occurring in the company's system and then tabulating the results into two chronological groups, construction completed prior to December 31, 1924, and Construction completed subsequent to December 31, 1924. The cleavage was made at December 31, 1924, because the year 1924 marked the end of the ten-hour day (See Appendix F) and the beginning of the eight-hour day
36 which it was thought might in the long run have an effect on man-hour productivity. This date also served to divide the period examined into two large spans of years in each of which many feet of main were installed.

The results of the analysis are shown in Table 13. This tabulation gives by job the number of feet of 10-, 12-, and 20-inch main installed per man-hour and clearly indicates the calculation by means of which this information was determined. The average hourly wage rates used in the calculation (Column E) are the wage rates that underlie the factors used to trend the account in Exhibit No. 20.

The "cost to install" figures shown in Column D of the table are in some instances the result of allocations of total costs of main installation jobs. Allocations of job costs had to be made in those instances where more than one dimension of main had been installed. They were made on the basis of cubic yards of excavation per trench foot, as established by Mr. Antonelli. (See appendix H.) Since the portion of job costs excluded from Table 13 is less than 5 percent except for three jobs, the effect of the allocations on results is not great; in most instances the amount allocated was less than 1 percent.

Table 14 is a recapitulation of the figures shown on Table 13. It is to be noted that the number of jobs analyzed for 10-, 12-, and

20-inch main were 21, 14, and 5, respectively, and that, in the order given, the years they cover range from 1905 to 1937,
37 from 1910 to 1936, and from 1911 to 1925. In other words, the analysis of 10-inch main covers the greatest number of jobs and the longest period, and the analysis of the 20-inch main the least number and the shortest period.

38 TABLE 13.—*Mains—Construction—Determination of the number of feet of 10-, 12-, and 20-inch main installed per man-hour in the years prior and subsequent to Dec. 31, 1924*

42 MAINS-EQUIPMENT

Mains-Equipment is the largest of the company's accounts chargeable with equipment costs. Primarily, it contains the cost of pipe, valves and fittings that go into main lines. From an Original Cost of $10,225,450, this account was trended to $13,360,169, an amount $3,134,719 or 30 percent in excess of that Original Cost.

In the exposition of this account, which follows, the factors used to trend its Original Cost in Exhibit No. 20 are explained, the points of difference between this account and the Well-Construction and Mains-Construction Accounts are noted, the inherent fallacy of the factors used to trend this account are pointed out, and finally, a comparison of pipe prices adjusted to reveal the effect of the trend with the pipe prices shown in the Estimated Cost of Reproduction New offered by Mr. George I. Rhodes for the Company, is presented. The comparison conclusively shows the error of the trending.

*The Development of the Trend Factors.*

The mechanics by which trending was accomplished need not again be discussed; they are the same for this account as for Well-Construction and Mains-Construction. Attention may be immediately directed to the basis for the trend factors.

The data underlying Exhibit No. 20 show that the factors developed to trend Mains-Equipment are composites derived
43 by combining a Fittings Trend and a Line-Pipe Trend weighted in the ratio of 13½ and 86½ percent, respectively, for each of the years from 1892 to 1938 (See Appendix I). The Fittings Trend was derived from a weighting of couplings and clamps and other materials, in the ratios of 89, 5½ and 5½ percent, respectively, and the Line-Pipe Trend from the arithmetical average of the cost per ton each of 2, 3, 4, 6, and 8 inch pipe. Since the Line-Pipe Trend is given a weighting nearly equal to seven-eighths of the whole, its examination is of uppermost importance.

The Line-Pipe Trend for the period prior to the year 1900 was based upon the price of wrought iron pipe; for the period 1900 to 1902, upon the price of steel pipe; and for the years subsequent to 1902, upon the price of steel screw pipe, f. o. b. destination. Where possible the prices used were those paid by the Hope company, but in many instances they were not, as a photostatic copy of the work sheet for 2-inch pipe reproduced here as Appendix J, shows. The company purchased no 2-inch pipe after 1915, yet a price for that size of pipe continued to be used in developing the yearly trend factor for the years 1915 to 1938. That price was the price paid by Peoples Natural Gas Company, an affiliate of the Hope company, or a price developed by interpolation.

The trending of Mains-Equipment, being a trending of material costs, presented a somewhat different problem for examination than the trending of Producing Gas Wells-Well Construction and Mains-Construction. In the case of those accounts the ques-
44 tion raised was that the man-hours expended in years prior to 1938 were not the equivalent of the man-hours of 1938 and that, therefore, those accounts should not be trended by factors based upon hourly wage-rates alone. A question similar to that, as to whether the material purchased in the years prior to 1938 is the equivalent of material purchased in 1938, might also be raised (The United States Steel Corporation indicate a substantial improvement has been accomplished in the making of steel pipe—See Appendix K), but it is not susceptible of quantitative proof

and has not been pursued. The examination into the propriety of the factors used to trend Mains-Equipment has been confined to the question of whether the prices of the sizes upon which the Line-Pipe Trend were predicated are representative of pipe actually charged to the account.

Table 15 shows that about 5 percent of the cost in the Mains-Equipment Account represent mains 8 inches or less in diameter and that the remaining 95 percent of the cost represents mains ranging from 10 to 20 inches in diameter (Appendix L). Since the Line-Pipe Trend is based on averages of the price of 2, 3, 4, 6, and 8 inch pipe only, it clearly is not representative of the account. Notwithstanding this fact, the trend might nevertheless be acceptable if prices for all sizes of pipe had fluctuated throughout the years in unison and to the same degree, but this does not appear to have been the case.

45 TABLE 15.—*Mains—Equipment—Main line 8 inches and less in diameter and greater than 8 inches in diameter, as at Dec. 31, 1938—Total book cost and reproduction cost new per Rhodes' appraisal*

| | Book cost [1] | |
|---|---|---|
| | Amount | Percent |

46 *Comparison of Prices Paid for Pipe.—Trended with Prices per Rhodes' Appraisal.*

Table 16 is a comparison of the price per foot of pipe 10 to 20 inches in diameter as determined from actual purchases, trended per Exhibit No. 20, and as shown in the company's Reproduction Cost New Appraisal presented by Mr. Rhodes (Exhibit No. 16, Part D). In this table are listed, in the aggregate

amount of $7,808,500, sixty important purchases of pipe, of which the earliest was made in 1902 and the latest in 1936. The price per foot of each purchase trended is compared individually with the price for the same size and kind of pipe as shown in the Rhodes' Appraisal.

The price per foot trended per Exhibit No. 20 was obtained by dividing the average actual cost per foot for pipe, f. o. b. destination, with the Line-Pipe Trend factor (Appendix I) for the year in which the purchase was made. The Line-Pipe Trend factor is precisely appropriate for this purpose since it is the component of the composite trend factor used in Exhibit No. 20 that reflects the changes in pipe prices.

The comparison shows that the actual cost trended is higher than the Rhodes' price in all instances save one. The exception was a purchase made at a special discount. As Column L of Table 16 indicates, the excess of cost trended over the Rhodes' price is in most instances a large one.

TABLE 16.—*Mains—Equipment.—Cost of important purchases of main line pipe trended to 1938 prices by means of Exhibit No. 20 line-pipe trend factors and then compared with Rhodes' reproduction cost new appraisal prices 1902–36.*

49 OTHER ACCOUNTS

The three sections of this report that immediately precede this one are devoted to three of the eight plant accounts listed in Table 1; this section is devoted to the remaining five, which represent plant of an Original Cost of $30,980,563 that was trended to $42,243,237. No analysis of these five accounts was made. A brief explanation of the basis upon which they were trended follows.

*Producing Gas Wells—Well Equipment.*

Producing Gas Wells—Well Equipment was increased in the amount of $2,495,792 by trending, from an Original Cost of $8,168,191 to $10,663,983. The series of factors employed to trend the account were composites made up of a Casing and Tubing Trend and a Closing-in Equipment Trend weighted in the ratios of .957 and .043, respectively. The trending for casing and tubing from 1902 to 1938 was based on the arithmetical average trend of a ton each of 2- and 3-inch tubing and 6⅝-, 8¼-, and 10-inch casing as determined primarily from the average delivered prices paid by the company. Where prices were not available from company records, supplementary prices were used.

*Field Lines—Construction.*

50 $2,962,099 by trending, from an Original Cost of $4,076,871 to $7,038,970. The factors used to trend this account are the same as those used to trend Mains—Construction.

*Field Lines—Equipment.*

Field Lines—Equipment was increased in the amount of $2,225,387 by trending, from an Original Cost of $8,279,885 to $10,505,272. Like the factors used to trend Mains-Equipment, the factors developed for this account are composites consisting of Pipe Trends and Fittings Trends weighted in the ratios of .865 and .135, respectively. The Pipe Trends are the same as those used to develop the Trend Factor for Mains-Equipment; the Fittings Trends are different. The composite trend factors for both accounts are similar in amounts. For the years subsequent to 1910 they never vary more than 1.0%, except for 1913 when the difference between them is 1.1%.

*Compressor Station Structures.*

Compressor Station Structures was increased in the amount of $686,840 by trending, from an Original Cost of $1,811,605 to

$2,498,445. This account includes both labor and material costs in proportions not readily ascertainable. Its trend factors are predicated upon the pricing of four structures, each typical of a different kind of construction, priced for each year to reflect the prevailing labor and material costs of that year.

51 *Compressor Station Equipment.*

Compressor Station Equipment was increased in the amount of $2,892,556 by trending, from an Original Cost of $8,644,011 to $11,536,567. This account includes both labor and material costs in proportions not readily ascertainable. Its trend factors are predicated upon a pricing of equipment in five stations, each typical of a different kind of equipment, priced for each year to reflect the prevailing labor and material prices of that year.

52 Summary

The Original Cost revised of the company's plant as presented in Exhibit No. 20, which amounts to $69,735,637, is trended in that Exhibit by means of factors to $105,101,912, purportedly for the purpose of translating it into its equivalent at "1938 prices." Most of the increase, which amounts to $35,366,275, is contained in several of the company's thirty-two plant accounts and three of them were chosen for detailed examination. Two of the three selected contain labor costs and one material costs, and combined they account for more than two-thirds of the increase due to trending. Other large accounts were also examined, cursorily, and they were found to have been trended in much the same manner as the three to which greater attention was paid.

The trend factors of the three accounts chosen for examination were first studied to get a full understanding of their formulation and composition and then the accounts themselves were analyzed. The study of the trend factors revealed that their application, in each instance, might produce quite distorted results and the analyses of the accounts were undertaken to obtain data for tests by means of which it could be determined whether or not this was so.

Five tests embracing substantial amounts of construction were made and are here presented. They thoroughly demonstrate that the trend factors far overreach reasonable bounds. In the
53 case of Producing Gas Wells-Well Construction and Mains-Construction which are labor cost accounts, their unreli-

ability was found to rest in their predication upon hourly wage-rates only, to the neglect of hourly productivity which is greater in 1938 than in earlier years. In the case of Mains-Equipment, a material cost account, their unreliability rests in their being based upon the cost of material not representative of the materials actually charged to the account. The trending of the labor costs capitalized, at 1938 hourly wage-rates, many more man-hours than would actually be expended to construct the property in 1938, in the manner and with the personnel of that year. The trending of the material costs produced too high a result because the material trend factors were based upon the prices of materials whose prices had risen relatively higher by 1938 than had the prices of the materials truly representative of the items actually charged to the accounts.

All of the tests presented were prepared from data compiled from Exhibit No. 20, the working papers and records that support it, or from Rhodes' Appraisal. This implies that the figures for 1938 which have been used in the comparisons are from these sources also, and they are. Their use in the circumstances was desirable and necessary; it does not signify their acceptance as a true guide to value or for any other purpose.

Finally it should be noted that if the intangible production costs previously charged to expense by the company do not represent a proper element of original cost, they do not represent a proper element of original cost trended. Many millions of dollars of such items are included in the trended figures.

## EXHIBIT NO. 43.—ESTIMATED RECOVERABLE GAS RESERVES AND PAST PRODUCTION OF THE HOPE NATURAL GAS COMPANY AS OF DEC. 31, 1938, VOLUME I, F. P. C. WITNESS ROSS

[Pages I to III omitted]

### WRITTEN STATEMENT

#### INTRODUCTION

This report presents an estimate of the developed, recoverable natural gas reserves and past production of the operated fee lands and leaseholds of the Hope Natural Gas Company as of December 31, 1938. It consists of three volumes.

Volume I comprises a statement of the conclusions drawn from an exhaustive study of the recoverable gas reserves and past production of the company, the source of the data used, and the procedure followed, with sample illustrations.

Volume II is primarily a statistical section containing a summary in which are given by geographical pool or producing areas: (1) The estimated production prior to 1913, (2) the production by years from 1913 to 1938, inclusive, and (3) the estimated future recoverable gas reserves. This summary is preceded by a recapitulation showing the same information in very condensed form.

Volume III contains summaries in which are analyzed in detail by geographical sand pools the estimated gas reserves which are recoverable from (A) present drilled wells, (B) from deeper sands in present drilled wells, (C) from additional locations on operated acreage, and (D) from additional locations on "In Lieu of Drilling" acreage.

There is included as an appendix of Volume I a tabulation entitled "Present Drilled Wells" showing a list of present drilled wells of the company as of December 31, 1938, included in this estimate of the remaining gas reserves.

There is also included as an appendix of Volume I, a similar tabulation entitled "Dead Wells on Active Acreage," showing a list of those wells of the company, which had been either sold

or abandoned prior to December 31, 1938, but which were located on acreage that was still operated on December 31, 1938.

2 Affixed to Volume III as Appendix i of this exhibit is a tabulation "Summary of the Operations of Gas Storage Projects."

DATA USED IN THE STUDY.

*Source of Data.*

The operating records of the Hope Natural Gas Company were the principal source of the information used in the preparation of this exhibit. These records include well data cards maintained by the engineering department, production and pressure data filed in the production department, well pockets containing field tickets, and miscellaneous information kept in the general files, and a report compiled by Mr. Ralph E. Davis in 1924. Reference has also been made to the records and maps of the United States Geological Survey and certain West Virginia State agencies.

*Well Data.*

Basic factual information concerning annual production, rock pressures, and general history of each sand that produced gas in each well was transcribed separately from the company's records to a well-data sheet prepared by engineers of the Federal Power Commission. A sample form of this sheet is illustrated on the following page. On this data-sheet were entered such information as the name of the company's operating district, county, well number, farm name, lease number, map index, producing formations, total depth, date of completion or purchase, date of abandonment, elevation of well if known, initial production and initial rock pressure. Deepening or plugging-back data and other pertinent information, appearing on the back of the well cards, were entered under "Remarks." The compilation of these data by sands or casing or tubing strings involved some 14,000 pages of basic information pertinent to the gas reserve study.

*Production Data.*

As a general rule, the Hope Natural Gas Company does not meter the production of gas from its wells or leases. The company does have, however, a number of leases in which

4 [page 3 omitted] the royalty payments are made on a volumetric basis and from which gas is metered.

In the absence of meters the company calculates the production of its wells by the "minute-rise" formula. This method of gas measurement, which is used generally throughout the Appalachian region, is predicated on the theory that the rise in pressure per minute after a producing well is closed indicates the rate at which gas was producing in that well prior to closing it in. This method uses the volume of the casing or tubing as a unit of measure and, with the application of Boyle's law, reflects the volume of gas produced under operating conditions at the time of the test.

Although the company began taking minute-rise tests in 1913 of all its wells, the volumes were not computed until 1924, when Mr. Ralph E. Davis, Consulting Engineer and Geologist, was engaged to establish depletion and depreciation rates of the producing properties for Federal income tax purposes. Since 1924 the company has calculated production annually.

Since the annual calculated production of all wells of the Hope Natural Gas Company represents the only available information as to volumes of gas produced, these volumes of calculated production have been accepted by engineers and geologists of the Federal Power Commission as being based upon minute-rise tests, and utilized by them in the computation of the gas reserves. These volumes were transcribed from the company's record to the well-data sheets previously described, by years, from 1913 through 1938. There was also tabulated in connection with the production the number of days that each well was open to the pipeline system, which represents the utilization of each well.

*Rock Pressures.*

The Hope Natural Gas Company recorded the rock pressures or well-head pressures of its wells once a month and made an annual rock pressure test on all wells during periods of minimum production. Generally, these annual tests were made during the latter part of August or the fore part of September. A study of the rock pressure histories indicated that the annual tests more closely reflected the actual reservoir pressures, because at the time of the year these tests were made, the wells had experienced a longer shut-in period, thus allowing for a more perfect equalization of pressure in the producing formations.

Furthermore, as stated by representatives of the company, greater care was exercised in making the annual tests than those made during the year when the wells were being operated at

greater capacity. For these reasons the annual rock pressures were utilized in estimating the gas reserves. In a few instances, however, where the annual pressures were not available, or appeared unreasonable, the monthly tests were used or the pressures were determined by interpolation.

*Maps.*

All maps used in the preparation of this report are based upon those provided by the Hope Natural Gas Company. These included principally a set of leasehold maps showing the location of operated and unoperated leaseholds and all wells ever owned by the company, and a set of working district maps showing pipe lines and well locations. Both sets of maps are of the approximate scale of two inches to one mile and show the company's coordinate grid system which provides an index to the well locations. The company's leasehold maps, reduced by photographic reproductions to a scale of approximately one inch to one mile, were used for working maps in the preparation of this exhibit.

*General Geology.*

The geology of West Virginia has been amply treated in the geological literature, particularly in the county reports of the State Geological Survey of West Virginia. Therefore this subject will be discussed here only briefly.

The natural gas fields of West Virginia are a part of the Appalachian field, which occupies a major geosyncline lying between the Appalachian Mountains on the east and the Cincinnati Arch on the west and extending continuously from the State of New York southwestward to Alabama. The sedimentary beds lying within this geosyncline have been subjected to intense folding which has resulted in the formation of anticlines and synclines whose axes are roughly parallel and extend in a general northeast, southwest direction. The West Virginia gas fields are closely related to the fields of Pennsylvania, Ohio, Kentucky, and Tennessee in that the mode of occurrence and accumulation of gas is largely similar, and the formations or horizons that produce gas are common to these states.

6 The major gas-producing horizons in West Virginia are of Pennsylvania, Mississippian, and Devonian age. The principal productive horizons from which the Hope Natural Gas Company obtains gas are the Salt, Maxon, Big Injun, Gantz, Berea, Fifty Foot, Thirty Foot, Gordon Stray, Gordon, Fourth,

Fifth, Speechley, and Benson Sands. Possibly with the exception of the Big Injun these sands are lenticular in character and exhibit considerable variation in porosity and permeability. Largely because of this and because of the absence of water generally, the gas occurs in synclines and on terraces as well as on the flanks and crests of anticlines. In fact, porosity and permeability are perhaps the two most important factors controlling the accumulation and production of gas from producing sands of West Virginia. This condition is characteristic of the producing formations of the Appalachian region and accounts in a large measure for the "spotted" areas of production.

PROCEDURE OF ESTIMATING GAS RESERVES

Although the majority of the Hope Natural Gas Company's wells are located in the northern half of the oil and gas producing region of the State of West Virginia, these wells are scattered throughout that area and do not form any one, single, continuous block of property. The producing properties of the company have ranged, and do range, in occurrence from one single well isolated miles from the nearest company well to groups of contiguous wells ranging in number from 2 to more than 500.

From a careful preliminary examination of the company's leasehold and operating maps and of the records of the wells drilled thereon, it was found impracticable to estimate the reserves underlying the company's properties as a unit, not only because of the scattered geographical location of the wells referred to above, but also because there are some 30 producing sands in West Virginia and very few of these sands extend continuously or are productive throughout the entire area or areas in which the company's properties are located.

Accordingly, it was deemed expedient for the practical purpose of preparing this reserve study to make a reasonable territorial grouping and segregation of portions of the State of West Virginia encompassing the company's producing properties into 27 units or areas. These 27 units have been termed "pool sheets." The basis underlying the division of the company's producing territory into these 27 "pool sheets" is purely one of convenience with the label meaning only that such area is involved in the determinations covered by this exhibit.

The company's gas-producing areas in each of these 27 territorial divisions were carefully studied. The producing horizons were identified from the company well records and the existence

of gas was determined from information customarily kept by natural gas producing companies, such as rock pressures, open flow tests, and records of production. During the course of these investigations it was found that the existence of producing wells proved that certain productive horizons extended over greater areas than others, that the limits of the production of gas in a given horizon had been defined in certain directions by the drilling of nonproductive wells. It was further found that in other directions the horizon had proved productive of gas at one or more other locations on company acreage. The occurrence of conditions of common pressures, and common characteristics of production existing in the wells in these areas and common formations providing the source of supply for the company's wells established a sound basis for a careful geological study of the areas adjacent to those wells.

It was found that there were many correlative characteristics pertaining to the wells in certain areas. Those wells had as their common dominant characteristic the fact that they depended upon the same sand or sands for their supply of gas and were dependent in varying degrees upon the same source of gas. The configurations of the "sand pools" were thereby defined by the natural occurrence of the supply of gas for the wells of the Hope Natural Gas Company.

As the investigations of the wells, producing horizons, and areas progressed, it was found that during the course of drilling for and production of gas from various sand pools, such operations had resulted in developing through one well the supply of gas in more than one sand pool. These investigations developed that those sand pools at different horizons were not coextensive one with another, but in some instances overlapped in varying degrees and extended over different areas. This situation gave rise to a further natural grouping of the company wells and acreage into productive areas of greater extent. These larger groupings conformed to the gas-producing areas which have been termed "pool areas."

It was considered that one-half mile was the maximum effective drainage limit of wells in West Virginia, and that
8 the use of this distance was not unreasonable for the purpose of estimating weighted average rock pressures by the isobaric method. Accordingly the wells of the Hope Natural Gas Company were grouped in designated geographical areas or "pool areas," the principal determining factor being distance between well locations.

Any well geographically located further than one-half mile from a "pool area" was considered an "Individual Well." And those wells located within the boundary of "pool areas" that have no other wells in that "pool area" producing from the same sand or sands were also considered "Individual Wells." Further, those wells located within the boundary of a "pool area" but further than one-half mile from a "sand pool," were also considered "Individual Wells."

In classifying these wells as "Individual Wells," separately from pool areas, consideration was given to such factors as location, producing sands, geological conditions, producing characteristics, rock pressure histories, and production histories. In the reserve study, each "Individual Well" was treated as a gas-producing unit.

The map presented as part of the proceedings in this case entitled "Map Showing Working Districts, Gas Wells, Pipe Lines, and Compressor Stations as of December 31, 1938," shows in color the designation, geographical location, and extent of each of these "pool areas," together with the location of other productive wells called "Individual Wells." "Sand pools" are not shown on this map because of the mechanical difficulty of reproduction on one map.

*Rock Pressure—Production Decline Method*

The proven gas reserves of the Hope Natural Gas Company were estimated by means of the rock pressure-production decline method. This method follows closely an application of Boyle's law for gases, which can briefly be stated as follows: The quantity of gas in a given volume is directly proportional to the absolute pressure, temperature being constant. Its application reflects the future recoverable reserves in underground sand
9 reservoirs by extrapolating the decline of well pressure versus cumulative production.

This method of estimating gas reserves is particularly applicable to West Virginia because of the erratic and lenticular character of the producing sands in that State, and also because of the absence of fluids which ordinarily would affect the accuracy of the method. Furthermore, the volumes of gas produced annually from each sand or sands were available by wells from 1913 to 1938, inclusive; and the annual rock pressures taken at the wellhead were also available for the corresponding sands.

The adoption of this method was made after a careful study of the available basic factual data, and of the applicability of other methods for estimating gas reserves.

For purposes of this reserve study, rock pressure data for the years 1913, 1914, 1921, 1922, 1927, 1928, 1932, 1933, 1937, and 1938 were used. Since these were years of minimum production and therefore minimum utilization for the majority of the wells of the company, the annual rock pressures for these years reflected more accurately the underground reservoir conditions than did the pressures taken during the intervening years.

The producing wells and acreage of the Hope Natural Gas Company are intermingled with those of other companies and are located both in individual areas constituted of single wells and in groups constituted of contiguous wells. In this study, wells and areas, whose locations were relatively close, were grouped according to geographical pools; and each sand pool was treated as a unit of natural gas reserve, since the gas could be withdrawn through the various wells in that area according to the methods of operation. The grouping of wells in this manner reflected underground reservoir conditions more truly than if each of the contiguous wells in that pool were treated individually. For those single wells which did not have sufficient contiguous production for the same sand, however, the gas reserves were computed for the "Individual Well" based upon a study of the rock pressures and a study of the production of that "Individual Well," or from comparable sand pool history.

10 *Sand Pools*

The first step in estimating gas reserves was the grouping of contiguous wells producing from common reservoirs into sand pools. A common reservoir has been considered to be one or more sands in a gas area, so interconnected through the bore hole of wells in that area as to permit equalization of pressures. As many as five or six sands may be producing through one string of casing, whereas originally each had been produced through a separate string of casing or tubing. Thus, by equalization of pressures through the well bore, the sands became a common sand reservoir.

Since any given well may produce through the casing from a single sand or through separate strings of casing or tubing within the well bore from one or more sands, the term "well" is used in this exhibit to denote a sand well producing through a string

of casing or tubing. For this reason, a well may appear in one or more sand pools.

The grouping of wells into sand pools involved the examination and classification of approximately 14,000 well data sheets. A sample sand pool map is illustrated on the following page. This map shows the location and serial number of all wells drilled by the company to the Gordon Sand in sand pool 2–1 Gordon.

[Page 11 omitted.]

12. *Isobaric Maps.*

The weighted average rock pressure during each of the ten years for each sand pool was determined by the use of isobaric maps. These maps were designed to show by lines of equal pressure the conditions in the sand reservoir. They were prepared by first plotting, accurately, the wells on base maps, which were drawn on a scale of approximately one inch to one mile. These base maps were prepared from photographic reproductions of the company's leasehold maps. Next, the current rock pressure of each year was plotted at the point the well is located on these maps, for each sand pool, and lines of equal pressure (isobars) were drawn to determine the areal extent of each pressure. Each area betwen the isobars was then carefully measured by means of a planimeter and the measured area thus obtained was multiplied by the mean pressure of the area to determine the weighted average pressure for each sand pool for each of the indicated years. Over 500 isobaric maps were prepared in the manner described. A sample isobaric map is illustrated on a following page. The annual rock pressures shown on this map are for 1938.

The annual calculated production was cumulated for all of the wells considered in each sand pool. This cumulative production and the weighted average pressures, together with the number of producing sand wells, were tabulated to facilitate the construction of rock pressure-production decline graphs. A sample tabulation is shown on the page following the sample isobaric map.

*Rock Pressure—Production Decline Graphs.*

A rock pressure-production decline graph was constructed for each sand pool. The weighted average rock pressure, for each of the ten years indicated, was plotted on coordinate graph paper and the rock pressure decline drawn by connecting these points. On the same graph paper the cumulative production at the end

of each year was plotted as abscissas, and against this was plotted as ordinates, the weighted average rock pressure at the end of the corresponding year as determined by the rock pressure decline graph. An example of a rock pressure-production decline graph is shown on a following page. This graph represents the rock pressure-production decline for "sand pool" 2–1–Gordon.

Examination of the graphs thus constructed disclosed that considerable variation existed in the rate of decline of pressure when plotted against production over the period extending from 1913 through 1938. In general there seemed to be a more rapid rate of decline of pressure for the volumes of gas produced
16 [pages 13 to 15 omitted] between 1913 and 1920 than between 1920 and 1930. Since the most recent operations reflect what the company may expect in the near future and since a ten-year history is considered a reasonable period of time for establishing reserves, the period from 1929 to 1938, inclusive, was used for extrapolating the curves to determine the future recoverable gas reserves. From an abandonment study of all wells abandoned by the company, it was found that 30 pounds was a reasonable average abandonment pressure for all wells producing from sands other than the Speechley and Benson sands. For the Speechley and Benson sands, which lie at considerably greater depths than the other sands, 100 pounds was considered a reasonabel abandonment pressure. Accordingly, the points of production for the last ten years which were in alignment, were extrapolated to these abandonment pressures for the purpose of estimating the recoverable gas reserves.

The gas reserves of "Individual Wells" located outside of sand pools were estimated by the construction of individual rock pressure-production decline graphs on which the rock pressures were plotted against the cumulated production of each well and the resultant graph extrapolated to the abandonment pressures mentioned above.

*Estimated Recoverable Gas Reserves of Present Drilled Wells as of December 31, 1938.*

By the method just described, the estimated recoverable gas reserves of the present drilled wells of the Hope Natural Gas Company as of December 31, 1938, were found to total 436,361,755 MCF. This figure is on a calculated production basis of measurement. Estimates of the recoverable gas reserves by sand-pools and individual locations are given in detailed summaries in Part A, Volume III of this exhibit.

*Estimated Recoverable Gas Reserves From Deeper Sands in Present Drilled Wells as of December 31, 1938.*

The Hope Natural Gas Company contemplates that deeper sands in 119 of the company's present drilled wells will be productive of gas and will yield additional reserves if these wells are deepened and the deeper sands therein exploited.

After a careful study was made of each of these wells, the gas reserves recoverable from the prospective deeper sand or sands in each well were estimated by multiplying the estimated present useful rock pressure of each deeper sand by the volume in MCF of gas produced per well per pound pressure-decline for the sand pool in which the deeper sand is located. The estimated present useful rock pressure of each deeper sand was based upon the present rock pressures of nearby wells producing from the same sand.

17

By the above described method, the total estimated gas reserves recoverable from deeper sands in these 119 present drilled wells was found to be 28,285,256 MCF. This volume is based upon a calculated production basis of measurement. The estimated recoverable gas reserves from deeper sands in each of these wells are tabulated in Part B of Volume III of this exhibit.

*Estimated Recoverable Gas Reserves From Additional Locations on Operated Acreage as of December 31, 1938.*

The Hope Natural Gas Company contemplates 78 additional well locations on certain of the company's operated acreage.

The procedure of estimating the recoverable gas reserves underlying these additional locations was similar to that used in estimating the reserves from deeper sands in present drilled wells. The estimated present useful rock pressure of the prospective sand underlying each location was multiplied by the volume in MCF of gas produced per well per pound pressure decline for the sand pool in which the well site is located to determine the estimated recoverable reserves. The present useful rock pressure of the prospective sand was based upon the present rock pressures of nearby wells producing from the same sand.

The total estimated recoverable gas reserves from these additional locations on operated acreage was found to be 20,962,230 MCF. This volume is on a calculated production basis of measurement. The list of leases on which the additional locations are contemplated and the estimated gas reserves recoverable from

each of these additional locations are given in Part C of Volume III of this exhibit.

*Estimated Recoverable Gas Reserves from Additional Locations on In Lieu of Drilling Acreage as of December 31, 1938.*

The Hope Natural Gas Company contemplates 23 additional well locations on certain of the company's leaseholds on which there were no wells but upon which the company was paying
18 royalties in lieu of drilling. The company contemplates drilling a well on each of these locations in order to recover fully the gas reserves which cannot be recovered from adjacent drilled wells.

The recoverable gas reserves underlying each of these additional locations on in lieu of drilling acreage were estimated in a manner similar to that employed in estimating the recoverable gas reserves from additional locations on operated acreage. The estimated present useful rock pressure of the prospective sand underlying each location was multiplied by the volume in MCF. of gas produced per well per pound pressure-decline for the sand pool in which the well site is located to arrive at the estimated recoverable reserves. The estimated present useful rock pressure of the prospective sand was based upon the rock pressures of nearby wells producing from the same sand.

The total gas reserves recoverable from the 23 well sites designated by the company as additional locations or in lieu of drilling leases was estimated to be 6,072,299 MCF. This volume is on a calculated production basis of measurement. The list of "in lieu of drilling leases" upon which it is contempated these additional locations will be made and the estimated gas reserves recoverable from each of the additional locations are given in Part D of Volume III of this exhibit.

*Past Production of the Company—1913 to 1938, Inclusive.*

As mentioned previously in this statement, the annual calculated production for all of the wells of the Hope Natural Gas Company was available from 1913 to 1938, inclusive, and was transcribed to well-data sheets for purposes of this exhibit. The annual production of all wells was totaled by "Sand Pools" and "Pool Areas" and "Individual Wells" for use in the reserve study.

The total annual volume of calculated production from all of the wells in each pool area has been so classified and summarized as to reflect for each of the years 1913 to 1938, inclusive, the portion of such production in each pool which was recovered from

the present drilled wells of the company, the portion recovered from the dead wells on active acreage, and the portion recovered from the dead wells on dead acreage. The annual production so classified is presented in Volume II of this exhibit. Those tables show that the total quantity of calculated production from all company wells during the years 1913 to 1938, inclusive, amounted to 1,129,600,832 MCF.

19 *Method of Estimating Calculated Production Prior to 1913.*

Since the calculated production for all wells of the Hope Natural Gas Company was not available until 1913, the calculated production prior to 1913 had to be estimated.

The method here employed for estimating production prior to 1913 used the decline in rock pressure experienced by the wells that had produced gas in the period prior to that date and the volume in MCF of gas produced per pound pressure-decline experienced by the same wells or contiguous wells after that date. The original rock pressures, where available from the company's records, were transcribed to data sheets. Where original rock pressures were not available or were questionable, they were estimated from the rock pressure histories of nearby company wells or obtained from other company records. In the case of purchased wells which had produced gas prior to the date of purchase, the recorded or estimated rock pressure as of the approximate date of purchase was used.

The volume in MCF of gas produced per well per pound pressure-decline for each sand pool for the period 1913 to 1921 was determined from the rock pressure-production decline graphs previously described. The volume in MCF of gas produced per well per pound pressure-decline was obtained by dividing the cumulative production for the selected interval of years (between 1913 and 1921) by the product of the average number of wells producing gas during that interval and the pounds of pressure decline for the sand pool during that interval. This volume in MCF per pound pressure-decline was then applied as a multiplier to the pounds of pressure-decline experienced by each of the wells which produced from the same sand or sands prior to 1913, to determine the production of gas prior to that date. Since this volume-pressure multiplier was determined upon the basis of calculated production, the estimated production prior to 1913 likewise is on a calculated production basis of measurement.

An illustration of the information used in estimating the calculated production prior to 1913 is presented in the sample work-

ing sheet which appears on the following page. It will be observed that the adopted volume in MCF of gas produced per well per pound decline in pressure for the interval of years after 1913 appears at the top of the sheet and is applied as a multiplier to the net pounds of (pressure) decline to obtain the estimated production given in the last column.

[Page 20 omitted.]

21 The estimated production prior to 1913 is given by geographical location in the summary contained in Volume II of this exhibit. The total calculated production prior to 1913 has been estimated as 403,797,000 MCF. This figure includes the volumes of gas produced by all wells owned by the company since 1899 through 1912.

Conversion of Calculated Production to Actual Production

All volumes expressed in this exhibit are based upon calculated production. It is recognized, however, that the calculated volumes of gas produced from individual wells do not represent the volumes that would have been recorded had they been metered. Therefore, to convert the volumes shown in the various summaries and parts of this report to volumes that are comparable to metered production, it is necessary to apply conversion factors or multipliers developed by engineers of the Federal Power Commission from a study of the company's past production. These conversion factors are given in the tabulation "Recapitulation of Estimated Recoverable Gas Reserves and Past Production," Volume II, page 4 of this exhibit.

Since the conversion factor for the 21-year period immediately prior to 1938 was found by Commission engineers to be consistently 0.70, it was reasonable to assume that this same factor was applicable to the future recoverable gas reserves. Accordingly, as a final step in the presentation of the results of this gas reserve study, the total volumes of recoverable gas reserves have been translated to actual volumes by the application of this 0.70 conversion factor.

22 Conclusion

The recoverable gas reserves from the present operated acreage of the Hope Natural Gas Company as of December 31, 1938, expressed as actual volumes in MCF, by the application of 0.70 conversion factor, are as follows:

| | Estimated recoverable gas reserves as of Dec. 31, 1938, in MCF |
|---|---|
| Present drilled wells | 305, 453, 229 |
| Deeper sands in present wells | 19, 799, 679 |
| Additional locations on operated acreage | 14, 673, 561 |
| Additional locations on in lieu of drilling acreage | 4, 250, 609 |
| Total | 344, 177, 078 |

## WITNESS' POSITION AND EXPERIENCE

Position: Engineer-Rate Investigator.

Education: High School, Ceredo, W. Va.; Lane Technical High School, Chicago, Illinois; Marshall College, Huntington, W. Va.; Ohio State University, Columbus, Ohio.

Experience:

1938 to date: Member of the staff of the Federal Power Commission, with title of Engineer-Rate Investigator. During this period have made numerous investigations and reports on natural gas utility properties. Have consulted with State Regulatory Commissions in the preparation of exhibits and testimony relating to natural gas properties, on depreciation and all other phases of rate-making.

1932 to 1938: Employed by the Railroad Commission of Texas as Chief Engineer of the Gas Utilities and Oil Pipe Line Division, in charge of all valuation and engineering reports and investigations relating to the operations of those companies in the State of Texas which were under the jurisdiction of that commission.

2 During this period valuations and reports were made on approximately 12,000 miles of gas production and transmission lines, 28,000 miles of oil pipe lines and 250 gas distribution systems. The total cost of these properties was in excess of one-half billion dollars. In the preparation of reports and exhibits on these properties it was necessary to determine depreciation rates on all classes of gas plant property. Approximately 7,000 bell-hole pipe inspections were made either personally or under my direction. From these inspections various data were listed in the determination of the extent and causes of underground corrosion of steel pipe and other factors leading to the ultimate retirement of pipe. Retirement studies of all classes of gas plant property were made from the records of all the companies investigated and the results analyzed.

When the Interstate Commerce Commission initiated its active regulation of interstate oil pipe line carriers during 1934 and 1935, I assisted that Commission's staff in setting up their method of inventory and inspection of oil pipe line carrier facilities, and accompanied Dr. Logan of the United States Bureau of Standards during the course of their inspection of oil pipe lines in the State of Texas.

During my employment as Chief Engineer of the Texas Railroad Commission, there were prepared, under my supervision, numerous engineering studies and reports on gas and oil properties, among which are listed the following major companies involved:

3 Natural Gas Production and Transmission Systems

United Gas Pipe Line Company.
Northern Texas Utilities Company.
West Texas Gas Company.
Lone Star Gas Company.
Public Service Corporation of Texas.
Rio Grande Valley Gas Company.
Tex-Mex Natural Gas Company.
Houston Gulf Gas Company.
El Paso Natural Gas Company.
Ankansas-Louisiana Gas Company.
City Gas Company.
Brazos River Gas Company.
M. & M. Pipe Line Company.
Southern Gas Utilities Company.
Texas Gas Utilities Company.
Producers Utilities Company.

Natural Gas Distribution Systems

San Antonio.
Ft. Worth.
El Paso.
Waco.
Community Natural Gas Co. (190 towns).
Miscellaneous small towns (60 towns).

Oil Pipe Line Carriers

Texas Pipe Line Company.
Atlantic Pipe Line Company.

Sinclair Prairie Pipe Line Company.
Humble Oil Company.
Texas Empire Pipe Line Company.
Sun Oil Company.
Gulf Pipe Line Company.
Shell Pipe Line Company.
Sinton Pipe Line Company.
Magnolia Pipe Line Company.
Barnsdall Pipe Line Company.
Numerous smaller properties.

On the above listed properties it was necessary to pre-
4 pare inventory and appraisals, and in a number of instances, prepare exhibits and testify thereon.

I also prepared engineering studies relating to the determination of service lives of the several classes of natural gas property, the causes of removal of gas plant from service; and the frequency of replacement of natural gas pipe lines from all causes.

During this period, engineering studies were prepared under my supervision, for the purpose of determining the cost of natural gas service, which included allocation studies necessary for the determination of the cost of service at "city gates" and to individual consumers.

It was also my responsibility to appear and testify a number of times on matters relating to proceedings before the Commission and appear as a witness for the Commission in the Appellate Courts of Texas in cases involving the determination of rate base, depreciation, allocation, and other phases of complete gas rate investigations.

Under my supervision, time studies were made in the field of actual labor performances, during the course of construc-
5 tion, on practically all major gas and oil pipe lines constructed in Texas over a five-year period beginning in 1933. This construction exceeded 1,000 miles of pipe lines of various sizes ranging from two to twenty inches in diameter.

In carrying out the duties and responsibilities of the engineering work of the division there were from six to twenty-five engineers employed under my supervision, the number varying with the amount of work in progress.

1927 to 1932: Employed by the City of Amarillo, Texas, as Assistant City Engineer and Water Superintendent. During this period I was in charge of all design, specifications, and estimates on municipal projects constructed by the City. Construction work

completed during this period included sanitary sewerage system, storm sewers, several railroad underpasses, sewage disposal plant, several hundred miles of water mains, and other municipal improvements. I designed and prepared specifications on a proposed $1,000,000.00 municipal natural gas plant for the City of Amarillo, part of which was constructed and placed in operation before leaving the service of the City. I assisted Black
6 and Veach, Consulting Engineers, in the preparation of a valuation of the properties of the Amarillo Gas Company. During this period I was also employed by the United States Bureau of Mines in connection with the construction of a helium extraction plant near Amarillo, Texas.

1925 to 1927: Employed by the Pacific Coast Steel Company in Seattle, Washington, as designer, detailer, and sales engineer of reinforced concrete structures.

1923 to 1925: Employed by the Consolidation Coal Company at Van Lear, Kentucky, as office engineer doing general engineering work.

1923: Employed by the American Rolling Mills Company in their steel plant located at Ashland, Kentucky, as detailer and mechanical draftsman.

Prior to 1923: Employed on various engineering work between school terms, and with the United States Army in France for one and a half years, during 1918 and 1919.

I am a member of the National Society of Professional Engineers, American Society of Civil Engineers, and a Licensed Professional Engineer in the State of Texas.

7 WRITTEN EXPLANATORY STATEMENT

INTRODUCTION

This exhibit sets out in detail by primary accounts the depreciation, depletion, or amortization method used and its application to the properties of the Hope Natural Gas Company.

Certain terms used herein are defined as follows:

"Depreciation," as applied to depreciable gas plant, means the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service, from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy,

obsolescence, changes in the art, changes in demand and requirements of public authorities and, in the case of natural gas companies, the exhaustion of natural resources.

"Depletion," as applied to natural gas producing land and land rights, means the loss in service value incurred in connection with the exhaustion of the natural resource in the course of service.

"Service Life" is the period during which a particular unit of property is used or performs a useful function in the rendering of service by the utility; likewise the period of service between the installation of a unit of property and its retirement from service.

8 "Service Capacity" means the total output of utility plant realizable during its service life, measured either in number of years of service, number of work operations performed, or other production factor, as appropriate.

"Service Value" means the difference between original cost and the net salvage value of gas plant.

"Salvage Value" means the amount received for property retired, less any expenses incurred in connection with the sale or in preparing the property for sale, or, if retained, the amount at which the material recoverable is chargeable to Account 131, Materials and Supplies, or other appropriate account.

"Cost of Removal" means the cost of demolishing, dismantling, tearing down, or otherwise removing gas plant, including the cost of transportation and handling incidental thereto.

"Net Salvage Value" means the salvage value of property retired less the cost of removal.

"Property Retired" as applied to gas plant, means property which has been removed, sold, abandoned, destroyed, or which for any cause has been withdrawn from gas service.

"Retirement Units" means those items of gas plant which, when retired, with or without replacements, are accounted for by crediting the book cost thereof to the gas plant account in which included.

"Life Cycle" is the period of service life comprehended in the period of usefulness of a unit of property in a given position.

9 The service life of a unit may be comprised of one or more life cycles; these need not be consecutive, but may never overlap. When a unit of property has a second cycle of life, it is second-hand or reused.

"Average Service Life" is the average of a substantial number of individual service lives of similar units of property.

"Composite Service Life" is the weighted average service life of two or more groups of property; likewise that period of service life within which a uniform depreciation or depletion accrual will amount to the sum of the service values of the individual units of property in one or more primary plant accounts or principal plant divisions to which the composite rate is applied.

"Unit of Production" is one unit, on a uniform basis of measurement, of the produced or delivered principal service or commodity which the property is devoted to produce or deliver.

"Production Method" is a method of depreciation or depletion computation in which the loss in service value of property is spread over its service life uniformly in proportion to its units of commodity produced or service delivered without regard to time.

"Straight-Line Method" is the depreciation or depletion plan under which the service value of property is charged to operation expense or other accounts in equal, as nearly as may be, periodic amounts throughout its service life. Thus, under this method, the annual depreciation charge is obtained by dividing the estimated service value by the number of years of estimated service life.

10 Scope of Exhibit

This exhibit describes the methods which have been used and the studies that were made in connection with the determination of average service lives and composite service lives applied to the gas plant of the Hope Natural Gas Company. It also describes the method employed to determine the necessary annual rates for depletion.

General Statement

The gas plant in service of the Hope Natural Gas Company (exclusive of distribution plant and properties used to transport coke oven gas) after having been grouped in accordance with the functional divisions of operations, consisted of several major classes of property as at December 31, 1938. These classes are listed in the following tabulation in accordance with the depletion and depreciation method which has been applied. (While a distinction is sometimes made between depletion and depreciation for the purposes of the following discussion, the word "depreciation" is intended to include "depletion" where appropriate.)

*Production Method.*

Natural Gas Producing Lands and Leaseholds.
Field Line Construction and Rights-of-way.
Gas Well Construction.

*Straight-Line Method.*

Structures (Production, Transmission, and General).
Measuring and Regulating Station Equipment (Production and Transmission).
Gas Well Equipment.
11 Field Line Equipment.
Main Transmission Line Construction, Equipment and Rights-of-way.
Compressor Station Equipment.
Communication Equipment.
Other Equipment (Production, Transmission, and General.

*Clearing Accounts.*

Drilling and Cleaning Equipment.
Transportation Equipment.

It is to be understood in the subsequent discussions that the items above designated are intended to reflect the costs of all materials, installation, and all other expenditures that would be lost by retirement of the property.

Comprehensive engineering studies and detailed field inspections have been made of all classes of property in order that a rational application of the basic principals of depreciation might be applied to the depreciable property of the Hope Natural Gas Company as of December 31, 1938.

The property of the Hope Natural Gas Company consists of several types of physical property having various mortality characteristics. In the determination of the proper service lives for each group of property, consideration has been given to not only the type of property, but also to the character of service
12 that these units are called upon to render and the service conditions under which they operate and render service.

The properties that are subject to removal or retirement due to the exhaustion of the supply of gas, which they were designed and constructed to produce or gather, have been grouped in the several producing areas, designated by Federal Power Commission geologists, and was depreciated on a unit of production basis. The annual rates of accruals have then been determined upon the basis

of units of production ratably in proportion to the annual production of gas with the rate in each year determined to be the ratio of the annual production to the remaining recoverable gas reserves.

In a few instances property in more than one of the present primary property accounts has been grouped and a composite rate determined for the combined property for which accurate experience data were available.

During the course of the determination of the average service lives of this property, numerous and detailed inspections were made of all classes of property in the system. This includes an inspection of all visible property subject to examination such as structures and compressing station equipment and sample inspections at many points of the underground pipe and buried property comprising the pipeline system. I also made analyses to determine the property retirement experience of the company covering property whose service life had been terminated and the depreciation realized and a review of the maintenance policy and operating practices over the forty-year history of the company.

In addition, a study was made of the service age of the principal identifiable units of the company's property. (Service age is the period of time between the date when property is first placed in service and the date of the investigation.) Careful consideration and effect was also given to all of the relevant facts determinable concerning the probable future life expectancy of the principal physical units of property. In addition to the extensive inspection and study of the company's property, there was available during the process of determining the average service lives for all classes of this property, considerable relevant data from the following sources:

1. Interstate Commerce Commission, Bureau of Valuation determinations of service lives for oil pipeline properties in the United States, including lives determined for systems located in the same general territory.

2. Bureau of Internal Revenue determinations of service lives for various classes of gas corporation property.

3. Conferences on the service lives of gas plant equipment with manufacturers and users of such equipment.

4. A study of the service lives adopted by various Commissions and courts in proceedings involving the determination of service lives for all types of utility property, including natural gas companies;

5. Numerous public utility service-life studies, including natural gas companies, prepared by prominent engineers; and

14 6. Numerous service-life studies of natural gas companies made under my direction while Chief Engineer of the Texas Railroad Commission.

An examination of the voluminous and comprehensive working papers underlying the determinations of average and composite service lives in this exhibit will indicate the careful consideration that has been given to the many factors involved in these determinations.

The summary attached to this written explanatory statement sets forth, by primary accounts and groups of accounts, the composite service lives and the annual rates of depreciation which I have determined to be reasonable and applicable to the gas plant of the Hope Natural Gas Company. Each primary account or group of accounts is discussed below in the same order as the accounts are listed on the attached statement of composite service lives.

SERVICE LIFE DETERMINATION BY ACCOUNTS

*Natural Gas Producing Lands (330–1).*

This account includes lands owned in fee on which are located producing gas wells. Since these lands were purchased primarily for the production of gas and would be an entire loss to the company at the end of their production period, the original investment was grouped by producing areas and depletion computed on a unit of production basis. A study made to determine what portion of its cost the company would be expected to recover

15 through the sale at the end of the lands' useful gas production life, and the amount was found to be negligible.

*Leaseholds (330–2).*

Leases included in this account have been segregated, by Federal Power Commission geologists, into (a) operated acreage held for the production of gas, and (b) unoperated acreage. All leases under the classification of operated acreage were segregated further into their respective gas producing areas and depletion has been provided on the basis of the units of production from each area.

*Other Production System Land and Land Rights (330–5).*

Property in this account consists of tracts of land owned in fee upon which it appears the company can realize at the end of

its useful life an amount approximating in the aggregate the original cost. This land has therefore been considered nondepreciable and no allowance has been provided for losses attributable to its use in gas service.

*Field Line Rights-of-way and Field Line Construction (330-4) (333-1).*

Included in this account grouping are the rights-of-way for all of the field lines, together with the labor and construction costs for field lines, both "field trunk" and "field gathering." No physical property is involved in these accounts,
16 as the expenditures relate to installation costs and the securing of easements and rights-of-way. Since this property will have no further service value after the exhaustion of the available gas supply, and unlike pipe and other materials, cannot be used again at other locations, it has been determined that it is proper to measure the service capacity of this property by the life of the supply and provide for its depreciation upon the basis of the use of the property measured by the production of gas. This property has therefore been depreciated on a production basis. However since this property had more than one use, it has been segregated into three groups as follows:

(1) Field Trunk and Gathering Lines.
(2) Local Marketing Lines.
(3) Lines receiving gas purchased under contracts.

The property included in group (1) was further segregated into the several designated gas production areas and depreciated upon a unit of production basis. Property included in groups (2) and (3) was depreciated on a unit of production basis, using over-all production as the base.

Local Marketing lines are defined as production system lines now devoted principally to the serving of towns and villages in West Virginia. A study made to determine whether such lines would be abandoned or removed from their present locations at the time of the exhaustion of the gas supply from the
17 Company's own production indicated that these local consumers would probably be supplied with gas service through pipe-lines laid in a more direct route to the main transmission lines. Since these towns and communities are scattered over the entire system of the Company, it was decided that the most accurate method of determining the service capacity and providing for the depreciation of the properties in this grouping would be on an over-all production basis.

Since data relating to the remaining value of gas reserves available to the Company from the purchase gas contracts were not available, it has been determined that the most equitable depreciation treatment for these lines would be similar to that for local marketing lines and such method has been adopted.

*Production System Structures (331–2) (331–3).*

Included in this account grouping are Field Measuring and Regulating Station Structures (331–2) and Other Production System Structures (331–3). Included under Field Measuring and Regulating Station Structures are approximately 590 regulator and meter houses. These structures are wood frame, metal sides and metal roof in construction. There are also included 1,480 free consumers' boxes. These structures are used to house equipment for the measurement of purchased gas. Most of these structures are small and portable.

Other Production System Structures include such struc-
18 tures as warehouses, district offices, pipe yards, machine shops, garages and miscellaneous smaller structures. These structures are located in the various operating districts and are for the most part of wood frame construction with metal sides and roof. There are several hundred of these structures, all of which I inspected in the field recording appropriate data, such as location, condition of maintenance, type of construction, type of foundation and age. A study was made of the Company's retirement experience on structures during the forty-year history of the Company. After giving consideration to all relevant depreciation factors causing the ultimate retirement of such property, both functional and physical, a composite service life of 24 years was determined to be reasonable and applicable to the Company's Production System Structures.

*Gas Well Construction (332–1).*

Well construction expenditures were grouped into designated gas producing areas and depreciated on a unit of production basis. There is no material included in this account for these well construction expenditures, such as labor and indirect expenses, and therefore they have no value after the exhaustion of the related gas supply.

*Gas Well Equipment (332-2).*

This account includes casing and tubing and other well equipment such as closing-in equipment, packers, pumping equipment and storage facilities.

From the records of the company a study was made of all natural gas wells both drilled and acquired since the beginning of operations. This study was segregated into two parts, wells presently active and wells which have been abandoned. From this study the average age of the present active wells and the average age of wells abandoned was determined.

When pipe casing, tubing, or other equipment, not bearing a serial number or other identifying mark is moved from one location and is returned to the ware house, it loses its identity. It therefore is impossible in the case of this company to determine the actual age of any specific section of such pipe, casing, or tubing which is reused and is in other than its first cycle of use.

It was determined, after making the foregoing studies and a consideration of all relevant facts, that casing and tubing would be used in more than one gas well during their physical service lives.

It was found that the Company does not recover all of the materials in the well at the time of its abandonment, and it was necessary to consider this fact in the determination of service life of such property. Studies were made of the past retirement experience of the Company, and data were tabulated showing the percent of materials not recoverable from wells at the time of abandonment. Other studies were made from the records of the Company to ascertain the average cost to abandon gas wells in accordance with the requirements of the laws of West Virginia. Data were secured on the average cost of abandonment of a gas well from other gas utility companies operating in the same area to check the accuracy of the average costs obtained from the study based on the current experience of the Hope Company.

During the spring and summer of 1939, engineers for the Federal Power Commission made numerous inspections in the field of casing and tubing as they were recovered from wells abandoned during that period. Much of this recovered casing and tubing had been previously used before being placed in these wells, which made it impossible to determine with any degree of exactness the age of the pipe in service, and therefore it was not

practicable to use this inspection data to establish the service life of casing and tubing.

In the absence of reliable data pertaining to the service lives of gas well casing and tubing, it has been necessary to utilize the service lives developed in connection with the transmission and field line pipe of comparable wall thicknesses, adjusted to give effect to losses other than physical.

In addition, a study was made of the Hope Company's experience in the retirement of all gas well equipment during the forty-year history of the Company.

After giving consideration to all relevant factors, it was determined that a service life of 40 years would be reasonable for gas well equipment.

21 *Field Line Material (333–1), Field Measuring and Regulating Station Equipment (333–2), Other Production System Equipment (337).*

Field Line Material (333–1) includes pipe and material in all field trunk and gathering pipe lines.

The principal use of these lines is for the collecting and gathering of gas from the well mouth to point of entry into the transmission system.

During the spring and summer of 1939, engineers for the Federal Power Commission made numerous individual inspections of pipe in these lines in the presence of engineers employed by the Company, at locations selected by the Company's representatives. There were 253 locations where inspections were made on field trunk and field gathering pipe lines.

From a study of the records of the Company, it was determined that the greater portion of the pipe included in this account had completed its first cycle of use and was reused or second hand pipe when it was installed at its present location. It was further found from an examination of the Company's records that it was impossible to determine with any degree of accuracy the age of this used field line pipe for it had lost its identity upon entering the warehouse after the first cycle of use, and no record was available from which the information could be secured. However, it was found that in some instances, where inspections were made that the pipe was new when installed. The data secured from the inspec-
22 tions of that portion of this pipe which was found to be in its first cycle of use, together with similar data on pipe inspected on transmission lines of known ages, were used in the study of service life.

After consideration of the available data on all pipe, it was determined to use the same service life for field trunk and field gathering pipe as was used for transmission pipe of comparable wall thickness. In so doing it was necessary of course to make adjustments for losses that would occur due to the shifting of the field pipe from one location to another.

The average service life that has been determined for this pipe gave consideration to the portion of the life of the pipe and equipment which had been consumed in service prior to its acquisition by the Company. A more complete discussion of the data collected and the methods used in the determination of service lives for all pipe is presented in connection with the determination of service lives of the main transmission line material, Account (353).

A study was made of the Company's retirement experience of field trunk and field gathering pipe lines, and information secured from this study was also given due consideration in the determination of service lives for this pipe.

Field Measuring and Regulating Station Equipment (333.2) includes equipment such as orifice meters, positive meters and gauges used principally to measure gas purchased by the Company, free gas to lessors and gas used in the Company's operations, and is located throughout the entire system. Field inspections were made of representative parts of this property, and a study was made of the retirement experience of the Company relative to the class of equipment included in this account.

23

Other Production System Equipment (337), includes items such as small gas engines, pumps, tools, etc., located at various points in the operating districts. A study was made of the retirement experience of the company relative to the class of property included in this account.

After giving consideration to all factors, both functional and physical, involved in the determination of the service life of this property, it was determined that a composite service life of 45 years would be reasonable for property grouped in these three accounts.

*Drilling and Cleaning Equipment (334).*

Investigation by the Commission's accounting examiners has revealed that depreciation of drilling and cleaning equipment is accounted for on the books of the Company through a clearing account, and is charged to gas plant or the operating expense accounts as appropriate. After considering the Company's expe-

rience in the retirement of drilling and cleaning equipment, it was found unnecessary to adjust the rates used by the Company for this account.

24 *Transmission System Land (351–12).*

This account includes tracts of land owned in fee and used principally as compressor station sites. No provision has been made for depreciation of these lands, for they are considered non-depreciable for it appears that there will be no losses in the aggregate attributable to their use in gas service.

*Transmission System Rights-of-way (351–23) and Transmission Line Construction (353).*

Transmission System Rights-of-way (351–23) includes the cost of easements and rights-of-way for all of the main transmission lines. Transmission Line Construction (353) represents the labor and indirect costs of construction of all transmission lines. The methods used in arriving at the service life of these accounts will be discussed later in connection with the determination of the service life of Main Transmission Line Material. These two accounts were kept separate in order to utilize the Company's recorded experience in the retirement of this classification of property. The average service life for the combined property in these two accounts has been determined to be the same as that of Transmission pipe line material, namely 34 years.

TRANSMISSION SYSTEM STRUCTURES

*Compressor Station Structures (352–2), Transmission System Measuring and Regulating Station Structures (352–3), Other Transmission System Structures (352–4).*

Compressor Station Structures (352–2) includes struc-
25 tures and improvements located at the several compressor stations. A field inspection was made by engineers of the Federal Power Commission of each of the forty-seven compressor stations of the Company. At each station data, such as the location, type of construction, size, condition of maintenance, kind of foundations and age, etc., were recorded for each of the many structures at each station. A careful study was made of the experience of the Company relative to the retirement of compressor station structures to ascertain the actual history of the Company in this matter. Further, a study was made from the records of the company to secure data relating to the cost of

abandoning compressor station structures and the percent of salvageable materials that had been recovered upon retirement.

It was found that the service life of the structures located at several compressor stations of the Company will be determined by the exhaustion of the available supply of gas which the station was constructed to compress. Consideration has been given in the determination of the service life of these structures to give proper effect to this known condition.

Transmission System Measuring and Regulating Station Structures (352–3), include structures such as measuring stations located at wholesale delivery points such as Clarington, Round Bottom, Bates and Wade, etc. All of these structures were inspected in the field and data were tabulated similar to that for compressor station structures. Studies were made of the
26 Company's retirement experience relating to structures under this classification.

Other Transmission System Structures (352–4) includes structures used by the transmission line operating personnel at various points on the transmission system. These structures consist of warehouses, pipe sheds, and pressure control houses, etc. These structures were also inspected in the field and appropriate notes made and data tabulated. A study was also made of retirements occurring to property of this class included under this account to develop the experience of the Company with similar property.

After giving weight to all relevant factors, both functional and physical, contributing to the ultimate retirement of this class of property, it was determined that a composite service life of 40 years is reasonable, proper, and applicable to the transmission system structures in these three accounts.

*Transmission Line Material (353), Transmission System Measuring and Regulating Station Equipment (354–3), Other Transmission System Equipment (354–4).*

Transmission Line material (353) includes pipe and fittings on all transmission lines. During the spring and summer of the year 1939, engineers for the Federal Power Commission made careful inspections of pipe in the field at approximately 297 locations on transmission pipelines and 253 locations on field pipelines. The locations of the inspections were selected by
27 Company engineers who were present at the time of these inspections.

The Federal Power Commission engineers made inspections and recorded data independent of that of the representatives of the

Company. Each inspection "bell-hole" was dug approximately six feet square with sufficient depth to completely uncover the pipe and permit an inspection of the bottom of the pipe as well as its sides and top. Data, such as the depth of the external pitting of the pipe (never less than ten pits on each 18-inch inspected section), location of pits, outside diameter of pipe, general characteristics of corrosion, kind of soil and topography were recorded. There was added in addition, information from the records of the company indicating the normal wall thickness of the pipe and its age in the position of installation. At practically all of the inspection locations samples were taken of the soil at points near the bottom and top of the pipe and also at the ground level. Corrosivity tests were made of representative samples of these soils, in Washington, D. C., under the direction of the United States Bureau of Standards and the results were correlated with the pit data recorded in the field by Commission engineers.

It is the general consensus of opinion that the average of the deepest pits that will be found in pipe will increase as the inspected area is increased. The method used by the Company engineers to determine the pit-depth area relationship, for the pipe of the Company, was found to be similar to that which
28 has been derived by the United States Buerau of Standards during the course of their study relating to the effect of underground corrosion of pipe. Using this same method, calculations have been made by Commission engineers to compute the average of the deepest pits in areas greater than those inspected in the field during the course of this investigation.

Upon completing the field inspections, the data secured were tabulated and analyzed and those inspections which appeared to have been made of pipe of an unknown age were omitted from the study of pitting rates as related to the age of the pipe. All of the remainder of the tabulated inspection data were analyzed and made a part of these studies. It was found that there has been a definite retardation in the rate of pitting of pipe, left undisturbed in the ground, with the passage of time. In the course of the studies analyzing this inspection data, calculations were made using several methods, and the results were plotted graphically to obtain the variation in service life of pipe using several terminal service conditions. All of these studies were used as guides in the determination of average service lives of pipe.

Members of the staff of the Underground Soil Corrosion Section of the United States Bureau of Standards, familiar with soil corrosion, were consulted to secure a further check on the Commission engineers' methods of analysis of available corrosion data.

In addition, a study was made from the records of the Company of the pipe retirements that have been experienced by the Company during the entire history of its operations, and this information was also given consideration in the final determination of the average service lives of pipe.

One of the determinations resulting from the studies and investigations is that, with conditions comparable, the wall thickness of pipe is one of the principal factors controlling its service life. Consequently the service lives which have been determined give proper consideration and effect to the wall thickness of the pipe. The average service lives determined to be reasonable and proper ranged from 35 to 75 years.

Transmission System Measuring and Regulating Station Equipment (354–3), includes meters, regulators, pipe and fittings located principally in the Clarington, Round Bottom, Bates and Wade measuring stations of the Company. All of this equipment was inspected in the field and appropriate engineering data recorded. Likewise, a study was made of the retirement experience of the Company throughout its history for this class of equipment.

Other Transmission System Equipment (354–4) includes items of property such as pumps, tanks, tools, and miscellaneous equipment located principally in transmission line warehouses. A study was made of the Company's retirement experience for this class of equipment.

After an exhaustive study and careful consideration of all relevant facts involved in the determination of the service lives of this property, it has been determined that a composite service life of 64 years would be reasonable and proper for the classes of property combined in these three accounts.

*Compressor Station Equipment (354–2).*

This account includes equipment, such as gas engines, compressors, pumps, motors, pipe, and fittings, located in the forty-seven compressor stations owned by the Hope Natural Gas Company. Detailed inspections were made in the field by engineers of the Federal Power Commission of all of the compressor station equipment and appropriate data such as type, size, kind, class, and manufacture of the equipment and its age, condition of maintenance, use, etc., were recorded. The operating record was compiled for each

of the nearly 200 compressing units in the system for each day of the calendar years 1934 to 1939 inclusive. This record contained for each unit the engine-hours operated, hours-down for repairs, volume of gas pumped in MCF, the suction pressures and discharge pressures, which provided a large volume of statistical data relating to the operation of this property. Data were also tabulated showing the major repairs and alterations of gas engines and compressors during this period, and in some cases prior years. The cost of maintenance of each station was also studied for a period of nearly 20 years where it had been in existence for that time, and for the complete period of its existence where it was of lesser age.

31 Gas compressor engines and their associated equipment can not be used economically unless they possess a high degree of performance in comparison with their capacity when new. Thus, when the time comes for such units to be retired, their service life is terminated and they are retired at net salvage value, even though the physical condition would enable them to continue to render service.

It has been found that equipment located at several of the compressor stations will not serve their total potential physical service lives at their present locations for the reason that the exhaustion of the gas supply in those related local areas which provide the supply of gas pumped by the station will terminate the service life of the components of material, labor, and indirect costs of the equipment for such locations. The engines, compressors, and other recoverable compressor station material may likely be transferred to another location and enter another cycle of use to complete its service life. Appropriate adjustments were made in the average service lives indicating the occurrence of this known functional condition to give effect to these causes of depreciation. A study was made of the retirement experiene of the Company during its forty-year history. Several major manufacturers of gas engines and gas compressors were consulted and data relating to service lives of such equipment was discussed to secure an additional check upon the proper average service lives.

32 After giving consideration to all the factors entering into the ultimate retirement of this class of property, both functional and physical and the factors involved in the determination of service lives of this class of property, it was determined that the compressor station equipment of this Company would have a composite service life of 39 years.

*General Land And Land Rights (370).*

This account includes tracts of land on which are located the general structures of the Company, such as offices, warehouses, machine shops and garages. No provision has been made for depreciation of these lands, for it appears that there will be no loss in the aggregate attributable to their use in gas service.

*General Structures And Improvements (371).*

Included in this account are the general office buildings, warehouses, machine shops and garages of the Company. A field inspection was made of all of this property and appropriate data were recorded for each structure. A study of the retirement experience of the Company for this class of property revealed that to date few retirements had been made. It was further found there were two distinct classes of structures in this account, one class of structure being brick or fire-resisting and the other class being structures of less durable materials. This fact made it necessary to determine the average service lives of each class separately.

After consideration was given to all factors involved in the determination of the service life of this property, it was
33 determined that 50 years would be the proper service life for the general office building and general garage, and that 35 years would be proper for all other less durable structures, with the composite service life of all of these structures and improvements being 46 years.

*Furniture and Fixtures (372).*

This account includes all of the furniture and fixtures of the Company located in its general offices. A study was made of Company experience to give consideration to retirement losses on this class of property.

After a consideration of all relevant factors involved in the determination of the service life of this property, it was determined that a service life of 25 years would be reasonable and proper for office furniture and fixtures.

OTHER GENERAL EQUIPMENT

*Stores Equipment (374), Shop Equipment (375), Laboratory Equipment (376), Tools and Work Equipment (377), Miscellaneous Equipment (379).*

Stores Equipment (374), includes items of property such as benches, racks, bins, platforms, etc.

Shop Equipment (375), includes items of property such as drill presses, power saws, lathes, grinding machines, etc.

Laboratory Equipment (376), includes property used for testing gas, gas density apparatus, etc.

34 Tools and Work Equipment (377), includes items of property such as transits, levels, and other surveying instruments.

Miscellaneous Equipment (379), includes minor items of property such as time clocks, carbon monoxide detectors, etc.

Studies were made of the retirement experience of the Company on these classes of property, and after giving consideration to all factors it was determined that a composite service life of 27 years would be proper.

*Communication Equipment (378).*

Communication Equipment includes all general telephone and telegraph equipment in the communication system of the Company. There was no reliable mortality data available for this class of equipment from the property records of the Company, as the cost of practically all replacements had been charged currently as incurred to the maintenance expense account, and the true retirement losses were not reflected in the Company's property records.

Field inspections were made of this property by Commission engineers and appropriate data as to the type, kind, size and character of the construction were recorded.

After a consideration of all available relevant information and factors involved in the determination of the service life of this property, an average service life of 26 years was found to be reasonable and proper for Communication Equipment.

35 *Transportation Equipment (373).*

Transportation Equipment includes automobiles, trucks and garage equipment of the Company. The investigations of the Commission's accounting examiners reveals that the depreciation for this property is accounted for by the Company through a clearing account, and is charged to gas plant or the appropriate operating expense account as the equipment is used. After considering the Company's experience in the retirement of Transportation Equipment and the rates it uses, it is determined to be unnecessary to revise the annual depreciation rate used by the Company.

*Summary by methods*

| Classification | Adjusted original cost 12-31-38 | Composite service life (years) | Annual straight line rate (percent) |
|---|---|---|---|
| Straight line method | $40,229,028.04 | 46.72 | 2.14 |
| Production method | 9,959,683.46 | | |
| Land and land rights | 280,901.94 | Non-Depreciable. | |
| Drilling and cleaning equipment, and transportation equipment | 728,007.20 | Clearing Account. | |

1 **EXHIBIT NO. 61.—DEPRECIATION AND DEPLETION OF GAS PLANT AS AT DECEMBER 31, 1938, F. P. C. WITNESSES SMITH AND DUNN**

WRITTEN STATEMENT

The Federal Power Commission, under date of October 14, 1938, issued an order of investigation into and concerning all rates, charges, classifications, rules, regulations, practices, or contracts of Hope Natural Gas Company. In accordance therewith, an examination of the accounts and records of Hope Natural Gas Company has been made, and, as a result, this report on the annual and accrued depreciation and depletion, as related to the original cost of the gas plant of the company, is submitted.

*Purpose and Scope of this Study.*

The purpose of this study is to determine the proper annual operating expense for depreciation and depletion and the proper amount of accrued depreciation and depletion as of December 31, 1938.

This study covers the period 1898 to 1938, inclusive, which is the entire corporate existence of the company to this date. It includes the original cost of plant accounts and additions, retirements, and adjustments thereto; property acquisitions and reserves acquired thereby; the losses from property retired and sundry matters affecting depreciation accounting.

Plant costs which are subject to loss in service value from causes described in the definition of depreciation, item 14, in the Uniform System of Accounts, have been depreciated at the
2 rates determined from service life estimates determined by the Bureau of Engineering. Plant costs, which are subject to loss in service value primarily as a result of exhaustion of natural gas resources, are depleted at rates derived from the annual production and natural gas reserves as determined by the Bureau of Engineering.

The depreciation and depletion expense is computed, and shown in the exhibit, by years, in order to give immediate effect to plant changes and retirement losses. All plant costs and retirement losses have been considered in this exhibit.

484807—42——12

*Depreciation Accounting as Practiced by Hope Natural Gas Company.*

Throughout its existence, the Company has recorded in its accounts depreciation expense and the accumulated reserves. As shown in Schedule No. 6, the accrued reserves amounted to $40,759,450.48 as at December 31, 1938. In order to discuss briefly the depreciation accounting, the following tabulations are submitted:

| | | |
|---|---|---|
| Balance in reserves as of Dec. 31, 1938 | | $40,759,450.48 |
| Less reserves for: | | |
| Operated acreage | $489,034.48 | |
| Unoperated acreage | 231,299.52 | |
| Cost of abandoning | 3,001.58 | |
| Contracts for gas | 813.44 | |
| Surplus property available for sale | 80,456.25 | |
| Appreciation—Clarksburg Lights & Heat Company | 45,431.90 | |
| | | 850,037.17 |
| Reserve for depreciation | | 39,909,413.31 |

3 The components of this reserve are summarized as follows:

| | |
|---|---|
| Provisions | $45,425,185.45 |
| Reserves acquired | 2,164,107.45 |
| Total credits | 47,589,292.90 |
| Charges | 7,679,879.59 |
| Balance, Dec. 31, 1938 | 39,909,413.31 |

*Reserve Provisions.*

The provisions have been computed at widely varying rates and on various classifications of property. In general the provisions have been far in excess of requirements as proved by the large reserve balance in relation to plant accounts and the fact that the company has made two retroactive adjustments of depreciation expense, resulting in large credits to the Surplus Account. The first of these adjustments was recorded on Voucher D 136, 1908, in the amount of $1,651,600.82. The second adjustment was recorded, pursuant to an authorization granted by the West Virginia Public Service Commission dated December 18, 1934 in the amount of $5,901,317.53. Of this latter amount, $1,083,126.75 was a debit adjustment of the Reserve for Amortization of Drilling

Costs. The accounting for well drilling costs is summarized briefly in order to emphasize the Company's practices concerning these costs as they have an important part in this case.

From the inception of the Company until 1923, only materials (casing, tubing, equipment, etc.) of producing properties were capitalized. Drilling costs were charged to operations through the following expense accounts:

Years 1898–1907, inclusive, Account 6, Drilling wells (construction).

Years 1908–1920, inclusive, Account 16, Drilling new wells (construction).

Years 1921–1922, inclusive:

Account 2A, Gas well labor.

Account 2B, Gas well supplies and expense.

Beginning in 1923 (effective date of the first West Virginia system of accounts) it became the policy of the Company to capitalize the well drilling costs (intangibles). However, concurrently with the charge to plant accounts, a reserve in equal amount was set up by a charge to Account 62E—Retirement and Depletion Expense—Drilling Costs, and a credit to a reserve account, Amortization of Drilling Costs. In 1932 the reserve balance was transferred to an account Retirement and Depletion Reserve—Drilling Costs. Otherwise the procedure remained the same until 1934 when the above-mentioned adjustment of $1,083,126.75 was recorded to restate the reserve on a production basis. The balance in the reserve was transferred to the Reserve for Depreciation—Gas Well Construction.

*Reserves Acquired.*

It has been the accounting policy of Hope Natural Gas Company to enter in its records the book cost and book reserve for depreciation in the case of property acquired from affiliated companies or properties purchased in their entirety. In the cases of property acquired from nonaffiliated public utility companies, the original cost has been recorded by Hope Natural Gas Company, in accordance with its own accounting practice, that is, to record as fixed capital all material cost and the direct construction cost, except well construction. The difference between the amount recorded in the plant account and the purchase price (purchase price is generally less than original cost) has been taken as the measure of accrued depreciation existing in

the property and, therefore, credited to the reserve for depreciation.

The reserve balances thus acquired have been considered in the examiners' report schedules and are shown on line 49 of Schedule No. 1. Schedule No. 1 shows the total of $2,389,561.09, which is identified with the total per books as follows:

| | | |
|---|---|---|
| Total reserves acquired, per books at Dec. 31, 1938 | | $2,164,107.45 |
| Items not included in line 49 of Schedule No. 1: | | |
| Drilling and cleaning equipment | $16,870.60 | |
| Teaming | 223.62 | |
| Autos and trucks | 24,817.61 | |
| Distribution plant | 165,041.79 | |
| Other property | 16,152.65 | |
| | | 223,106.27 |
| | | 1,941,001.18 |
| Items added to line 49 of Schedule No. 1: | | |
| Drilling and cleaning equipment | 303,996.37 | |
| Teaming | 42,020.98 | |
| Autos and trucks | 102,542.56 | |
| | | 448,559.91 |
| Total | | 2,389,561.09 |

Examiners' adjusting entry No. 303, shown in the original cost study, reduces the capitalized cost and the acquired reserves in the amount of $412,186.80 as explained in that entry. The charge to the reserve is included in the depreciation report schedules as shown in Subschedule No. 7A.

6 *Reserve Charges.*

A summary of charges to the depreciation reserve is shown, by years, as follows:

| *Year.* | *Amount* | *Note* |
|---|---|---|
| 1920 | $95,679.06 | (1) |
| 1921 | 524,880.79 | (1) |
| 1922 | 388,491.61 | (1) |
| 1923 | 205,090.31 | (2) |
| 1924 | 166,248.13 | (2) |
| 1925 | 150,062.04 | (1) |
| 1926 | 195,875.40 | (1) |
| 1927 | 183,727.52 | (3) |
| 1928 | 241,289.01 | (3) |
| 1929 | 191,551.64 | (3) |
| 1930 | 253,816.71 | (3) |
| 1931 | 236,287.30 | (3) |
| 1932 | 192,895.90 | (3) |
| 1933 | 120,664.38 | (2) |
| 1934 | 184,494.87 | (2) |

| Year: | Amount | Note |
|---|---|---|
| 1934 Adj | $205,034.27 | (a) |
| 1935 | 215,605.44 | (2) |
| 1936 | 336,149.86 | (2) |
| 1937 | 407,843.61 | (2) |
| 1938 | 392,460.61 | (2) |
| | 4,888,748.46 | |
| Adjustment from reserve for amortization of drilling costs | 2,791,131.13 | |
| Total charges | $7,679,879.59 | |

There were no charges made to the depreciation reserve until 1920. Prior to 1920, property retirements were handled through an account called Depreciation and Adjustment account, which in turn was closed to surplus. From 1920 to 1938 the reserve was charged as described in the following notes:

1. Reserve charged with the computed amount of depreciation accruals on the property retired. The profit or loss on retirements, computed on the ratio of the reserve to the investment at the beginning of the year, was charged or credited to surplus.

2. Reserve charged with the excess of book cost over salvage value of property retired.

3. Reserve charges computed as in (1) but corrected by (a). As corrected represents excess of cost over salvage.

In order to determine the past loss on property retired, detailed analyses of the depreciation reserve, surplus, and other accounts have been made by the Federal Power Commission examiners and the Company. The Company has further classified the losses sustained by the property groups shown in the examiners' report schedules. These studies made by the Company and the examiners have been reconciled for the entire period. The results of the studies are set forth in Schedule No. 7 of this exhibit and applied to the report schedules as shown on line 53 of Schedule No. 1.

*Costs Subject to Depreciation and Depletion.*

Plant accounts have been summarized from the various depreciation schedules in order to bring out, in condensed form on the report schedules, the fact that all plant costs, from the inception of the Company have been considered in the depreciation and depletion calculations.

Line Nos. 1 to 5, inclusive, of Schedules Nos. 1 to 5, inclusive, show certain totals which are explained by the five captions, as follows:

Line No. 1—Original charges per books.

Line No. 2—Adjustments by examiners.

Line No. 3—Adjusted total cost subject to depreciation and depletion.

Line No. 4—Retirements.

Line No. 5—Adjusted book cost, December 31, 1938.

The adjusted book cost at December 31, 1938, agrees with the total shown in the exhibit on the original cost of gas plant accounts (excluding the specific distribution property), in the amount of $51,207,620.64, shown on Line No. 5 of Schedule No. 1.

Line No. 4 of Schedule No. 1 shows the accumulated credits to plant costs, for property retired, in the amount of $21,341,265.64. A related amount, the retirements less salvage value, is shown on line No. 53 as a charge to the accrued reserve.

Line No. 3 sets forth the total original cost subject to depreciation and depletion after giving effect to the examiners' adjustments, but before retirements are deducted.

Line No. 2 shows examiners' adjustments applied to the original charges per books. The examiners' adjustments referred to are those set forth in the exhibit on the original cost of gas plant accounts in the amount of $2,099,171.81. This amount is reconciled as follows:

| | |
|---|---|
| Examiners' adjustments: | |
| Schedule No. 2—Depletable property | $ 694,604.21 |
| Schedule No. 3—Depreciable production property | 283,903.35 |
| Schedule No. 4—Transmission property | 889,079.68 |
| Schedule No. 5—General property | 521,191.25 |
| Schedule No. 1—Nondepreciable plant | 53,550.37 |
| Schedule No. 1—Summary | 1,043,329.44 |
| Other Accounts: | |
| Unoperated leaseholds | 104,811.48 |
| Coke oven gas property | 186,320.44 |
| Unoperated leaseholds transferred | 583,382.23 |
| Coke oven gas property transferred | 762,592.06 |
| Total other accounts | 1,055,842.37 |
| Total plant adjustments | 2,099,171.81 |

Line No. 1, Original Charges Per Books, represents the book charges of the Company's gross additions to plant accounts.

For the purpose of spreading the loss in service value as equitable as possible over the service life, the plant costs, adjustments, retirements, etc., have been classified by property groups and years. The classification is in accordance with a study made by the Company; certain details of which are set forth in Company Exhibit No. 24. These property groups are shown in detail on Schedules 2 to 5, inclusive. They are listed below:

| | Property group | Basis of depreciation and depletion | Service life in years |
|---|---|---|---|
| 1 | Operated acreage | Annual production | |
| 2 | Field line R/W and construction cost | Annual production | |
| 3 | Gas well construction | Annual production | |
| 4 | Cost of abandoning gas wells | Annual production | |
| 5 | Production system structures | Group service life | 24 |
| 6 | Field line material, measuring and regulating station equipment | Group service life | 45 |
| 7 | Gas well equipment | Group service life | 40 |
| 8 | Drilling and cleaning equipment | Clearing accounts at company rates. | |
| 9 | Main line R/W and labor | Group service life | 64 |
| 10 | Transmission structures | Group service life | 40 |
| 11 | Main line material, measuring and regulating station equipment | Group service life | 64 |
| 12 | Compressor station equipment | Group service life | 30 |
| 13 | General structures | Group service life | 46 |
| 14 | Office furniture and equipment | Group service life | 28 |
| 15 | Other general equipment | Group service life | 27 |
| 16 | Communication system | Group service life | 26 |
| 17 | Autos and trucks | Clearing accounts at company rates. | |

Items 1, 2, 3, and 4 above are further subdivided into Production Areas, which areas are shown in an exhibit prepared by the Commission geologists, and certain miscellaneous groups. In order to reduce the number of columns in this report the 73 Production Areas have been summarized by the pool sheet numbers as shown on Subschedules 2A, 2B, 2C, and 2D.

Depreciation and depletion expense has been computed year by year and this annual charge is shown on lines 6 to 47 of Schedule No. 1. It is computed on the average investment for the year. Lines 48 to 54 show how the annual expense is directly related to the reserve.

Following this statement are the examiners' adjusting entries to give effect to the annual and accrued depreciation and deple-

tion, as determined by the examiners and submitted in the accompanying schedules.

The purpose and contents of the entries are described, briefly, in order:

Entry No. 1 removes certain amounts in the Reserves for Depreciation and Depletion as recorded on the Company's
11 books at December 31, 1938. These reserves are admittedly overstated. In the explanation of the entry, certain amounts, which have not been adjusted by the examiner, are listed and described.

Entry No. 2 sets up the accrued Reserve for Depreciation and Depletion as determined by the examiner. One effect of these entries is to increase the earned surplus approximately $15,800,000.00.

Entry No. 3 is to remove depreciation and depletion expense, as recorded by the Company, from the income account for the years 1937, 1938, and 1939. Details of the provisions removed, and certain provisions not removed, are shown in the explanation of the entry.

Entry No. 4 removes the charges to the Reserve for Cost of Abandoning, representing the actual costs incurred during the years 1937 and 1938, and includes them as an operating expense item in the income account.

The reserve for abandoning property, as computed by the Company, has been eliminated in the examiners' study. The largest part of this charge is cost of abandoning gas wells. The examiners have provided a reserve for the cost to abandon all gas wells in service at December 31, 1938, based on an average cost to abandon of $1,007.40 per well, computed on the Company's production. The reserve maintained by the Company has little significance in that the provisions and charges thereto are practically equal.

12 Entry No. 5 removes the charges to the Reserve for Unoperated Acreage, representing the actual abandonments as recorded during the years 1937, 1938, and 1939 and includes them in Exploration and Development Costs.

The Reserve for Unoperated Acreage has been eliminated in the examiners' study. The Company has computed provisions at varying rates, beginning in 1920. The rate from 1927 to 1938 was 8% per annum on the balance in the account.

Entry No. 6 is an adjustment relating to the original cost study. In that study entry No. 324 credited the reserve for Unoperated

Acreage in the amount of $104,811.48. Since the reserve has been discontinued, this amount is transferred to earned surplus as it represents an over-abandonment of lease costs in the past. In the study of Exploration and Development Cost this amount has been prorated to all leases surrendered to December 31, 1938. The costs in the income statement are adjusted for the years 1937 and 1938.

Entry No. 7 is to record the depreciation and depletion expense, as determined by the examiner, in the income account. Details of this expense for the year 1939 will be presented in a supplemental statement, as the present study ends at December 31, 1938.

Clarksburg, West Virginia, March 18, 1941.

## HOPE NATURAL GAS COMPANY

*Summary of annual and accrued depreciation and depletion of gas plant in service (exclusive of distribution plant) as at Dec. 31, 1938*

| Line No. | Particulars | Total plant | Total depletable plant | Depreciable plant | | | | Nondepreciable plant |
|---|---|---|---|---|---|---|---|---|
| | | | | Total | Production plant | Transmission plant | General plant | |
| | (a) | (b) | (c) | (d) | (e) | (f) | (g) | (h) |
| | Cost subject to depletion and depreciation: | | | | | | | |
| 1 | Original charges per books | $73,592,215.72 | $10,960,583.23 | $62,273,654.34 | $32,120,155.02 | $27,654,279.04 | $2,499,217.28 | $327,981.15 |
| 2 | Adjustments by examiners | *1,043,329.44* | 694,604.21 | *1,694,174.28* | *285,305.55* | *889,079.88* | *521,191.25* | *45,759.97* |
| 3 | Adjusted total cost, subject to depletion and depreciation | 72,548,886.28 | 11,655,187.44 | 60,579,477.06 | 31,836,261.67 | 26,765,199.16 | 1,978,026.03 | 284,221.78 |
| 4 | Less retirements | 21,341,365.64 | 1,728,823.82 | 19,612,441.82 | 15,483,572.42 | 3,062,713.22 | 1,066,176.18 | |
| 5 | Adjusted book cost, Dec. 31, 1938 | 51,207,020.64 | 9,956,363.62 | 40,967,035.24 | 16,352,689.25 | 23,702,486.14 | 911,849.85 | 284,221.78 |
| | Depletion and depreciation computed annually: | | | | | | | |
| 6 | 1898 | 44.75 | | 44.75 | 28.26 | | 16.49 | |
| 7 | 1899 | 674.88 | | 674.88 | 477.70 | 163.94 | 33.24 | |
| 8 | 1900 | 3,347.29 | | 3,347.29 | 1,963.44 | 1,347.54 | 36.31 | |
| 9 | 1901 | 5,622.47 | | 5,622.47 | 3,216.56 | 2,363.46 | 42.45 | |
| 10 | 1902 | 24,828.18 | | 24,828.18 | 17,191.25 | 7,356.05 | 280.88 | |
| 11 | 1903 | 59,662.11 | | 59,662.11 | 36,022.27 | 22,918.82 | 721.02 | |

| Telephone and telegraph system | *6,247.49* | | | | | |
| Teaming | 168,805.54 | | | | | |
| Autos and trucks | 424,224.14 | | | | | |
| Total of above | 3,060,415.97 | | | | | |
| Total per Exhibit 24, table B, column 2 | 2,375,634.18 | | | | | |

[1] In order to set up retired gas wells by production areas the examiners went through the gas well ledgers, listing the capitalized construction cost of each retired well which resulted in the amount of $806,597.83.

[2] Depreciation reserve not adjusted for teaming, autos and trucks, drilling and cleaning equipment. The retirements, per books, are not shown on the examiners' schedules for these items, hence the total retirement losses amount to $7,120,305.86 as follows:

| | |
|---|---|
| Total, column (d) | $6,292,465.14 |
| Drilling and cleaning equipment | 234,811.04 |
| Teaming | 168,805.54 |
| Autos and trucks | 424,224.14 |
| Total | 7,120,305.86 |

[3] The total loss on property retired from 1898 to 1938 shows a credit of $6,247.49, as a result of a credit made to the depreciation reserve on voucher A-168, 1921, in the amount of $13,465.82 for an adjustment of telephone lines. It is the opinion of the examiners that the costs adjusted by voucher A-168 were originally charged to maintenance rather than to plant, and, consequently, the adjustment should be a credit to surplus rather than the depreciation reserve.

Italic figures denote decrease.

. [Pages 39 to 40 omitted.]

Column (c), Examiners' work papers supporting Exhibit 61.
Column (d), Exhibit 65, pages 36, 37, and 38.
Column (e), Exhibit 24, Table A, page 19.

Explanations:
Figures in () in Column (g) indicate lower rate due to increase in reserve balance.
Figures in () in Column (h) indicate amount available for reduction due to decrease in rate base at 6 percent rate of return.
Figures out of () in Column (i) indicate increase in expense due to increase in depreciation rate, and consequently a decrease in amount available for reduction.
Figures out of () in Column (j) indicate decrease in amount available for reduction due to all factors involved in change of depreciation rate.

## EXHIBIT NO. 62.—WORKING CAPITAL, F. P. C. WITNESS NICHOLS

### WRITTEN STATEMENT

#### I—Working Capital Requirements

The Federal Power Commission, under date of October 14, 1938, issued an order of investigation into and concerning all rates, charges, classifications, rules, regulations, practices or contracts of Hope Natural Gas Company. In accordance therewith, an examination of the accounts and records of Hope Natural Gas Company has been made, and, as a result, this report on the Working Capital requirements of the Company is submitted.

Schedule No. 1 is a summary of the working capital requirements, based on operating expenses as adjusted by the Examiners of Accounts for year 1939, plus an amount for a stock of Materials and Supplies, which results in total Working Capital as follows:

| | |
|---|---|
| Materials and supplies | $1,228,599 |
| Cash working capital, based on operating expenses as adjusted | 755,746 |
| Cash working capital, based on exploration and development costs exclusive of abandoned leases | 56,897 |
| Total working capital | 2,041,242 |

*Materials and Supplies.*—The allowance for Materials and Supplies in the amount of $1,228,599 is based on the following:

| | | |
|---|---|---|
| Materials and supplies total per books as of Dec. 31, 1939 | | $1,501,806.53 |
| Less materials for resale | | 16,092.34 |
| Balance warehouse materials | | 1,485,714.19 |
| Average monthly balance, 1939 | | 1,435,599.00 |
| Less the following items approximated from Company's Exhibit No. 37: | | |
| Distribution materials and supplies | $75,000.00 | |
| Oil production materials and supplies | 95,000.00 | |
| Value in excess of salvage on nonusable materials | 37,000.00 | |
| | | 207,000.00 |
| Balance included in working capital | | 1,228,599.00 |

The gross issues of Materials and Supplies during the year 1939 amounted to $887,933.67, which indicates that the stock on hand as of December 31, 1939, was sufficient, on the average, to meet the requirements of the Company for a period of approximately 1 year and 8 months, without taking into consideration the materials and supplies that were returned to stock for salvage, etc.

The following table shows the extent to which the Materials and Supplies were issued during 1939 for various purposes:

TABLE No. 1

| Account | Amount | Percent of total |
|---|---|---|
| Miscellaneous gas revenues | $5,784.31 | .65 |
| Operating expenses: | | |
| Production operation | 21,658.99 | 2.44 |
| Production maintenance | 34,669.91 | 3.90 |
| Purchased gas expense | 4,217.46 | .48 |
| Transmission operation | 43,014.68 | 4.84 |
| Transmission maintenance | 44,491.50 | 5.01 |
| Distribution expense | 11,075.08 | 1.25 |
| General expense | 1,462.08 | .16 |
| Total operating expense | 160,589.70 | 18.08 |
| 3 Clearing accounts | 81,912.81 | 9.23 |
| Construction work in progress | 344,206.18 | 38.76 |
| Retirement work in progress | 122,579.97 | 13.81 |
| Other work in progress | 18,958.81 | 2.14 |
| Cost of merchandise and jobbing | 1,527.46 | .17 |
| Deferred debits and suspense | 2,384.33 | .27 |
| Accounts receivable: | | |
| Associated companies | 130,893.90 | 14.74 |
| Other | 19,058.79 | 2.15 |
| Expense of nonutility operations | 36.41 | |
| Total (gross issues) | 887,933.67 | 100.00 |

Of the amount issued to Associated Companies, Hope Construction and Refining Company received $92,261.88 and Reserve Gas Company received $33,854.42. River Gas Company received $4,655.41 and the balance of $122.19 was issued to miscellaneous companies,

The allocation to Production and Transmission of the amount included in Working Capital for Materials and Supplies as shown in Schedule No. 1, Columns (g) and (h), is based on the ratio of the amount of materials and supplies used during the year 1939 for Production and Transmission expenses to the total materials and supplies charged to operating expenses, exclusive of Distribution expenses. This is illustrated by the following details:

| Materials and supplies issued (Table 1) | | Percent of total | Working capital allocation (Schedule 1) |
|---|---|---|---|
| Production operation | $21,658.99 | | |
| Production maintenance | 34,669.91 | | |
| Purchased gas | 4,217.46 | | |
| Total production | 60,546.36 | 40.9 | $502,497 |
| Transmission operation | 43,014.68 | | |
| Transmission maintenance | 44,491.50 | | |
| Total transmission | 87,506.18 | 59.1 | 726,102 |
| Total production and transmission | 148,052.54 | 100.00 | 1,228,599 |

4 It will be noted by reference to Table No. 1 above, that nearly 15% of the total issues during 1939 represented sales of material to associated companies, which includes the amount, of approximately $92,000 issued to Hope Construction and Refining Company, chiefly for oil operations. Relatively, this would indicate that about 15% of the materials and supplies on hand as of December 31, 1939, or about $215,000 is held for the benefit of associated companies. However, the only amount deducted for such items is $95,000, as shown in the footnote of Schedule No. 1, indicatd as "Oil Production Materials and Supplies."

5. *Operating Revenue Deductions.* The Operating Revenue Deductions are shown in Schedule No. 1 per Company books exclusive of Depreciation and Depletion. Examiners' adjustments have been applied to the book amounts and the resulting adjusted total is $13,160,959.35. The adjusted Administrative and General Expenses amounting to $808,908 have been allocated for the purpose of this report to Production, Transmission and Distribution Expenses in the manner shown by Schedule No. 2. The allocations are on various bases as described in the schedule, the most of which, it will be noted, are on the basis of all direct charges prior to the allocation.

Certain items have been eliminated from the Operating Revenue Deductions, or given special treatment in this report for various reasons, each of which will be separately commented upon in the order in which they appear in Schedule No. 1, as follows:

*Taxes.*—No allowance of cash working capital has been made to provide for the payment of taxes, because all taxes were paid long after the receipt of revenues. Table 2, which follows, shows the accumulation of tax accruals per books during the year 1939

and the accumulated payments of tax assessments. This table shows a range of accruals in excess of the payments from approximately $96,000 to over $761,000. The latter represents the balance at December 31, 1939, and the former at January 31, 1939:

6 TABLE No. 2

[Accumulated to End of Month]

| Month | Accruals | Payments | Balance |
|---|---|---|---|
| January | $95,817.83 | | $95,817.83 |
| February | 191,635.66 | $6,004.82 | 185,630.84 |
| March | 287,453.49 | 12,085.92 | 275,367.57 |
| April | 383,271.32 | 124,807.17 | 258,464.15 |
| May | 479,089.15 | 130,862.43 | 348,226.72 |
| June | 668,885.51 | 147,134.61 | 521,750.90 |
| July | 783,890.27 | 228,460.21 | 555,430.06 |
| August | 898,895.03 | 249,372.41 | 649,522.62 |
| September | 1,013,899.72 | 256,327.08 | 757,572.71 |
| October | 1,157,890.92 | 704,569.59 | 453,321.33 |
| November | 1,301,882.05 | 711,560.98 | 590,321.07 |
| December | 1,479,703.93 | 718,524.79 | 761,179.14 |

The foregoing table does not take into consideration the accumulation of tax accruals in excess of payments as of January 1, 1939, which amounted to $476,586.38. The bulk of this balance represented West Virginia property taxes for the last half of the year 1938, which were not paid until April, 1939. Thus, in addition to the amounts shown in the table, the Company had funds during the months of January to March, inclusive, that had been accumulated for tax purposes, amounting to approximately $475,000.

The difference between the accumulated accruals as of December 31, 1939 ($1,479,703.93) as shown in Table No. 2, above and the amount of taxes charged to Operating Revenue Deductions, per books ($1,436,731.75) represents social security taxes charged to Work in Progress, Accounts Receivable, etc.

*Gas Well Royalties.*—The Gas Well Royalties are given special treatment for the purpose of this report, inasmuch as they are practically all paid in advance for periods varying from three months to one year.

7 The Royalty account was examined for the purpose of segregating the amounts thereof that were paid monthly, quarterly, semi-annually and annually. Following is Table No. 3 which shows the amounts so segregated, and while it does not purport to be accurately distributed to the last dollar, it is considered

by the Examiners of Accounts to be sufficiently accurate for the purpose intended:

TABLE No. 3

[Periods Paid]

| | Monthly not in advance | In advance | | |
|---|---|---|---|---|
| | | Quarterly | Semi-annually | Annually |
| Gas well royalties, paid as gas well rental | | $513,865.82 | $3,587.50 | $224,589.80 |
| Royalties paid on the basis of production | 11,794.56 | | | |
| Sundry cash payments | | 14,749.28 | | |
| Checks returned | | (12,759.61) | | |
| Sundry transfers and credits | | (6,250.52) | | |
| Sundry charges | 118.90 | 509.31 | | |
| Rentals due in 1939, but payment deferred | | 3,120.72 | | |
| Payments in lieu of drilling: | | | | |
| Unoperated acreage | | 52,742.60 | | 4,227.50 |
| Operated acreage | | 4,362.00 | 250.00 | 13,943.76 |
| Total | 11,913.46 | 570,339.60 | 3,837.50 | 242,761.06 |

Included in the "Sundry Charges" are certain items of gas in lieu of royalties. Although such expense items do not represent an expenditure of cash, the amount is negligible for the purpose of this report. It will also be noted that certain payments have been deferred, which fact was disregarded for the purpose of this report.

8 The provisions for cash working capital based on the above enumerated expenditures is as follows:

| Period | Amount | Working capital | Proportion of working capital to total |
|---|---|---|---|
| Monthly, not in advance | $11,913.46 | $992.79 | 8.33% |
| Quarterly, in advance | 570,339.60 | 142,584.90 | 25.00% |
| Semiannually in advance | 3,837.50 | 1,918.75 | 50.00% |
| Annually in advance | 242,761.06 | 242,761.06 | 100.00% |
| Total | 828,851.62 | 388,257.50 | |

*Gas Used in Company Operations.*—The entire amount charged and credited to Operating Expenses for gas used in Company operations is eliminated because the cost of producing and transporting said gas is reflected in the various operating expenses. The credit slightly exceeds the charges for this item, the difference being rep-

resented by charges for gas to accounts other than operating e
penses. Some such charges were made to clearing accounts, a pa
of which would, in the ordinary course of the Company's
counting procedure, be transferred to the operating expens
However, the necessary mechanics of determining the exact amou
is not commensurate with the value of the results.

*Depreciation on transportation equipment, well tools, e
charged to operating expenses through clearing accounts.*—T
amount determined by the Examiners of Accounts for this elimi
tion is on an overall average basis, and was obtained after analy
of all clearing accounts. The percentage of the charges for dep
ciation to the total charges in each clearing account was applied
the various amounts that were cleared to operating expenses fr
said accounts. The result was the amount used to represent t
charges for depreciation included in operating expenses. T
amount eliminated ($23,344.27) represents a proportionate part
the following charges as developed in Table No. 4.

| | |
|---|---|
| 9 Depreciation on transportation equipment, charged direct to Account 903.1 Transportation, Expense, Clearing | $23,773 |
| Depreciation on shop equipment, charged direct to Account 903.2, Clarksburg Garage Shop, Clearing | 1,529 |
| Depreciation on drilling and cleaning equipment, charged direct to Account 908, Drilling and Cleaning Equipment, Clearing | 18,374 |
| Total | 43,677 |

Following is Table No. 4, which is a summary of the amoun
charged to operating expenses from each clearing account, and t
approximate amount of depreciation included therein:

TABLE No. 4

| Clearing account | Charges to operating exp. | Less use of hired autos | Balance | Depreciation include | |
|---|---|---|---|---|---|
| | | | | Percent | Amount |
| 902 | $8,012.37 | | $8,012.37 | 1.19 | $9 |
| 903.1 | 119,466.23 | $32,016.95 | 87,449.28 | 11.75 | 10,27 |
| 903.2 | 44.48 | | 44.48 | 6.80 | |
| 905.1 | 75,592.45 | | 75,592.45 | | |
| 905.2 | 22,885.99 | | 22,885.99 | 0.11 | 2 |
| 907.1 | 29,093.09 | | 29,093.09 | | |
| 907.2 | 14,674.23 | | 14,674.23 | | |
| 908 | 4,767.80 | | 4,767.80 | 43.28 | 2,06 |
| 909 | 148,663.89 | | 148,663.89 | 0.66 | 98 |
| 910 | 237,427.32 | | 237,427.32 | 4.17 | 9,90 |
| Total | 660,627.85 | 32,016.95 | 628,610.90 | | 23,34 |

The depreciation charged to clearing accounts other than 903.1, 903.2 and 908 are represented by amounts transferred to other clearing accounts from those to which the depreciation charges were originally made.

*Purchased Gas.*—No allowance for working capital has been made to provide for the purchase of gas because large sums are collected from associated utilities to which gas is sold, in advance of the date on which payments are made for the gas purchased. Payment for a comparatively small portion of gas purchased is due on the 10th of the month following the purchase and the balance is due on the 20th.

Two schedules are presented herein, being Schedules Nos. 3 and 4, to show respectively, the average lag in cash receipts from associated utilities for gas sales, and the average lag in payments for gas purchased. The lag is calculated, in each case from the 15th of the month during which gas was sold and purchased. These schedules show that there was, on the average, a period of 4 days between the receipt of an aggregate sum of $13,930,353.97 for gas sales to associated gas utilities, during 1939, and the payment of an aggregate amount of $7,632,030.69 (unadjusted) for gas purchased, during that year.

The Examiners of Accounts have no intention, by this elimination, to intimate that dollars are "tagged" for specific purposes. But a month to month study of the cash receipts from sales of gas to the associated utilities, as compared with the payments for gas purchased, shows that enough revenues were received from these sources alone to pay for gas purchased in advance of the date such payments were due, with substantial amounts in excess of the cash requirements therefor.

For the purpose of illustrating the foregoing facts, details are shown in Table No. 5 which follows. It will be noted that each month is shown independently with no balances carried over to the next month. The table shows the recorded dates the various cash items were received, the dates on which payments were made for gas purchased, and the excess of cash receipts over the cash disbursements during the month as of each date shown.

| Date 1939 | Cash receipts | | | Cash disbursements | Balance |
|---|---|---|---|---|---|
| | East Ohio Gas Co. | The Peoples Gas Co. | River Gas Co. | | |
| Feb. 10 | | -- | -- | $12,779.38 | $12,779.38 |

TABLE NO. 5—Continued

| Date 1939 | Cash receipts: East Ohio Gas Co. | Cash receipts: The Peoples Gas Co. | Cash receipts: River Gas Co. | Cash disbursements | Balance |
|---|---|---|---|---|---|
| Dec. 4 | $300,000.00 | | | | $300,000.00 |
| 9 | | | | $14,427.64 | 285,572.36 |
| 18 | 400,000.00 | | | | 685,572.36 |
| 20 | | $157,286.36 | | 769,702.68 | 73,156.04 |
| 21 | | | $8,773.80 | | 81,929.84 |
| 28 | 450,630.52 | | | | 532,560.36 |

Italic figures denote deficit.

The gas sales contracts with the three companies shown in the foregoing table provide for payment as follows:

The East Ohio Gas Company, 75% on or before the 15th of the month following the purchase; balance on the 27th.

The Peoples Natural Gas Co., On or before the 30th of the month following the purchases.

River Gas Company, 30th of the month following purchases.

Cash receipts as of the 20th of each month from sales to the three companies shown in the foregoing table are in excess
13 of the payments on the 20th of each month for gas purchased in amounts varying from $73,100 in December to $613,200 in April, with a monthly average of $375,500.

*Distribution Expenses.*—All direct Distribution Expenses plus an amount allocated from Administrative and General Expenses have been eliminated for the purpose of this report. It will be noted that the adjusted Distribution Expenses amount to $629,332.07 and that the amount eliminated under the caption "Distribution Expenses" is $625,722.52. The difference of $3,609.55 is included in the deductions under the two captions "Gas Used in Company Operations" and "Depreciation on Transportation Equipment, etc." Nothing has been eliminated to cover the cost of producing gas that was sold in West Virginia.

*Balance of Operating Expenses.*—The balance of Operating Expenses for the year 1939 after elimination of the various items for special treatment as noted is $2,939,902.26. This is shown in Schedule No. 1.

The sum of $367,488 has been included in the working capital to provide for this balance of operating expenses, which represents 12½ percent thereof, or the average amount required for a period of 45 days. This, in the opinion of the Examiners of Accounts, represents a liberal allowance to cover expenses, as

adjusted, which are to be paid in cash prior to the receipt of revenues.

*Provision for Exploration and Development Costs.*—The Exploration and Development Costs as adjusted by the
14 Examiners of Accounts amounted to $500,343.58 during the year 1939, as follows:

| *Item* | *Amount* |
|---|---|
| Delay rentals | $407,284.24 |
| Nonproductive well drilling | 47,895.17 |
| Cancelled and surrendered leases | 45,164.17 |
| Total | 500,343.58 |

Working Capital has been provided on the basis of 12½% (or an average of 45 days' operations) on the charges for Delay Rentals and Nonproductive Well Drilling, which amounted to an aggregate sum of $455,179.41 during the year 1939. The amount included for working capital is $56,897.

*Total Working Capital.*—The total working capital as shown by Schedule No. 1 is $2,041,242, which, in the opinion of the Examiners of Accounts, is a liberal amount to be allowed for the Company's requirements in its export business. In proposing this allowance for Working Capital, the Examiners of Accounts have taken into consideration the fact that the Company accumulates substantial cash funds through its Depreciation, Depletion and Tax accruals. It appears that these accruals would provide the Company with funds far in excess of any possible requirements for minimum bank balances.

The general cash funds of the Company, exclusive of its local collection depositories at the end of each month during the years 1939 and 1940, were as follows:

| Month | 1939 | 1940 |
|---|---|---|
| January | $170,892.74 | $921,084.17 |
| February | 470,283.37 | 321,951.87 |
| March | 186,685.57 | 287,048.49 |
| April | 134,093.52 | 506,108.80 |
| May | 137,618.31 | 209,954.17 |
| June | 63,679.24 | 280,220.35 |
| 15 July | 325,670.74 | 120,026.72 |
| August | 365,980.55 | 203,938.80 |
| September | 1,737,766.85 | 515,115.10 |
| October | 1,666,903.79 | 212,555.53 |
| November | 416,474.37 | 417,740.39 |
| December | 493,911.81 | 386,113.88 |

*Average Lag in Cash Receipts and Disbursements.*—Schedules Nos. 3 and 4 show the average lag in cash receipts from sales of gas to associated companies and the average lag in the payments for gas purchased. These schedules, which have previously been referred to, indicate that the average date on which the revenues were received is the 16th of the month (31 days' lag), following the rendition of services and the average payment date for gas purchases was the 20th of the month (35 days' lag).

Further studies were made for average dates of cash receipts and disbursements, which show the following statistics:

| *Item* | Average date [1] |
|---|---|
| Receipts from nonassociated gas companies | 21st |
| Receipts for gas sales in West Virginia | 15th |
| General cash disbursements for miscellaneous charges to operating expenses | 10th |
| Payrolls | 1st |

The average date as shown for general cash disbursements was determined by a study of several vouchers charged to operating expenses with an effort on the part of the Examiners of Accounts to examine a representative cross-section of vouchers paid during the year 1939.

16 II—Working Capital Per Company Books

The working capital according to the Company's books at December 31, 1937, 1938, and 1939, is shown in Schedule No. 5, which is summarized as follows:

| Date | Excess current assets over current liabilities | Temporary cash investments | Balance of available working capital |
|---|---|---|---|
| Dec. 31, 1937 | $15,747,240.60 | $14,511,245.26 | $1,235,995.34 |
| Dec. 31, 1938 | 13,389,356.53 | 11,555,577.21 | 1,933,759.32 |
| Dec. 31, 1939 | 13,404,772.74 | 11,909,891.95 | 1,494,880.79 |
| Average | 14,213,783.00 | 12,658,904.00 | 1,554,879.00 |

The temporary cash investments as shown in the above table are presented in detail in Schedule No. 5 and are represented chiefly by investments in United States Government Securities. It will be noted that the only change in the Company's holdings of such securities during 1938 was the disposal of $900,000 of 2½% Notes due in 1939 and practically the same amount ($921,796.88) in-

[1] Date of month following rendition or receipt of services.

vested in 2½% Bonds due in 1950–52. During 1939 the Company disposed of Government securities of a book value of $6,484,296.88 and invested $5,399,702.00 in additional Government securities. This resulted in a decrease of $1,084,594.88 in book value of investments of this class.

In addition to the investments in Government securities, the Company advanced various sums from time to time to Standard Oil Company of N. J., and the balance at the close of each of the three years above mentioned was as follows:

| | |
|---|---|
| Dec. 31, 1937 | $3,506,479.63 |
| Dec. 31, 1938 | 521,983.45 |
| Dec. 31, 1939 | 1,960,893.07 |

17 Interest was paid by Standard Oil Company of N. J. at the rate of ½% per annum on these advances during the year 1939. Interest rates for prior years were not investigated.

The advances during the year 1939 ranged in amounts from $200,000 to $1,500,000 with an aggregate total of $9,350,000. Withdrawals ranged from $100,000 to $650,000 during the year, plus $1,800,000 withdrawn on December 20, 1939. The total withdrawals during the year amounted to $7,925,224.79, which resulted in an increase in the amount of the advances as of December 31, 1939, over the amount at December 31, 1938, of $1,424,775.21, as compared with the decrease in investments in Government securities of $1,084,594.88. The average end-of-the-month balance of the advances was $2,879,875.08 during the year 1939.

The balance of the working capital per Company's books at December 31, 1939, exclusive of the investments in Government securities and the advances to Standard Oil Company of N. J. is $1,494,880.79 as shown above, which is represented, chiefly, by the following items:

| | |
|---|---|
| Cash and working funds | $548,043.19 |
| Accounts receivable | 2,276,214.51 |
| Materials and supplies | 1,501,806.53 |
| Total | 4,326,064.23 |
| Accounts payable | 2,024,630.90 |
| Taxes accrued | 750,830.19 |
| Customers' deposits | 95,423.21 |
| Total | 2,870,884.30 |
| Balance | $1,455,179.93 |

18 *Source and Disposition of Funds.*—Schedules Nos. 6 and 7 are presented to show respectively the various changes in the assets and liabilities during the year 1939 and the sources from which cash funds were received and the disposition thereof during that year. Schedule No. 6 shows the current assets and current liabilities in detail as of December 31, 1938, and 1939, prior to the merger of Reserve Gas Company and the increase or decrease in each account during the year 1939. It also shows comparable balance sheet data as of the latter date after the merger.

Schedule No. 7 shows that net cash funds received from all sources amounted to $3,817,582.33 plus a reduction of working capital of $84,563.79 or a total of funds provided amounting to $3,902,146.02.

These funds were used chiefly for:

| | |
|---|---|
| Plant additions (gross) | $945,980.05 |
| Dividends on Common Stock | 2,796,930.00 |
| Total | 3,742,910.05 |

1 **EXHIBIT NO. 67.—COMPARATIVE INCOME STATEMENTS FOR THE YEARS 1937, 1938, AND 1939, VOLUME I, F. P. C. WITNESSES NICHOLS AND REINHARD**

## WRITTEN STATEMENT

The Federal Power Commission, under date of October 14, 1938, issued an order of investigation into and concerning all rates, charges, classifications, rules, regulations, practices, or contracts of the Hope Natural Gas Company. In accordance therewith, an examination of the accounts and records of Hope Natural Gas Company has been made, and as a result, this report on the determination of income is submitted.

*General.*

This exhibit presents a comparative income statement for the years 1937, 1938, and 1939 as adjusted by the examiners.

The report is in two parts. Volume I sets forth the income statement per books, reclassified, and as adjusted, with supporting and detailed schedules. Volume II contains the adjusting entries, and summaries, prepared by several Examiners of Accounts.

The schedules and adjustments concerning the revenues and taxes have been prepared by Mr. Nichols. The schedules and adjustments concerning operating expenses have been prepared by Mr. Reinhard. In order to present, in this exhibit, a complete reference to all adjustments necessary in the determination of income, adjustments prepared by other examiners are included. In each such instance, the explanation of the adjustment indicates the source; therefore, the details and testimony will be set forth under the other exhibits referred to.

*Reclassification.*

During the year 1939 Hope Natural Gas Company used an accounting classification in accord with the present Uniform
2 System of Accounts. To present a comparison for the three years by the detail accounts and amounts, the examiners have reclassified 1937 and 1938 substantially in accordance with the 1939 accounts, without, in any manner, changing the net

operating income comparable to the 1939 classification or net income transferred to surplus. The result of the reclassification is shown in Schedule 1, columns (c) and (g), entitled "Per Books, Reclassified." The reclassification is shown in account detail by Examiners' Entries No. 251 covering Gas Service Revenues, No. 252 covering Other Gas Revenues, No. 253 covering Operating Expenses, No. 254 and 256 covering Other Income and No. 255 covering Gross Income Deductions. The manner in which the reclassification entries are prepared and referenced to the book accounts, obviates the necessity for setting up a detailed income statement for the years 1937 and 1938, by the old account descriptions and amounts.

*Description of Schedules.*

Schedule No. 1 is a Comparative Income Statement, Reclassified for the years 1937 and 1938, showing adjustments made thereto for the years 1937, 1938, and 1939. This schedule sets forth, in condensed form, the amounts as recorded on the books of the Company, reclassified to conform to the 1939 Classification of Accounts as prescribed by the Federal Power Commission, the examiners' adjustments made thereto and the resulting amounts after application of the adjustments.

Attention is directed to the Net Utility Income per books, (columns (c), (g), and (k)) and as adjusted (columns (f), (j), and (n)) for the respective years covered in this report.

It will be noted that an increase develops in each year, which is accounted for and described as follows:

| Particulars | Net utility income | | |
|---|---|---|---|
| | 1937 | 1938 | 1939 |
| As adjusted | $3,565,310.34 | ($1,149,759.00) | $3,304,956.69 |
| Per books | 2,364,424.40 | 884,341.41 | 2,283,368.05 |
| Increase | 1,200,885.94 | (585,417.59) | 1,021,588.64 |

These increases are accounted for by a decrease in Operating Revenues, Operating Revenue Deductions, setting up Nonrecurring Expenses and Decrease in Exploration and Development Costs for years 1937 and 1938 and an increase in the year 1939. These groups of accounts are treated separately in the schedules dealing with detailed revenues, expenses and exploration and development costs that follow in this report, and are summarized below:

| Particulars | Examiners' adjustments—Increase or (decrease)* | | |
|---|---|---|---|
| | 1937 | 1938 | 1939 |
| Operating revenues | *$1,479,959.52* | *$750,618.48* | *$458,122.88* |
| Operating revenue deductions | *2,608,409.31* | *1,306,775.37* | *1,624,152.62* |
| Nonrecurring expenses | *45,285.56* | *51,120.43* | *69,256.90* |
| Exploration and development costs | *117,721.71* | *60,385.13* | *45,164.20* |
| Increase in net utility income | 1,200,485.94 | 585,417.59 | 1,021,588.64 |

* Italic figures denote decrease.

The increases arising from examiners' adjustments in net Income Transferred to Surplus, amounting to $861,294.20 in 1937, $300,929.98 in 1938, and $734,354.92 in 1939 are summarized in Schedule No. 1A.

4 *Gas Service Revenues.*

Schedule No. 4 (sheets 1, 2, and 3) shows the gas service revenues per books and as adjusted by the Examiners of Accounts for the years 1939, 1938, and 1937, respectively.

In order that the years 1937 and 1938 may be reasonably comparable with the year 1939, the book figures have been reclassified as shown in columns (c), (d), (e), and (f) of Schedule No. 4, sheets 2 and 3.

In addition to the dollar amount of the gas sales, the schedule shows the number of accounts at December 31 of each of the three years, the volume on the sales contract basis and the average rate per Mcf. These data were taken from the Company's Analysis of Gas Earnings.

A summary of the total gas service revenues, as adjusted, showing the amount of sales in the State of West Virginia and those outside the state is shown in the following table:

| Year | Total adjusted gas service revenues | Sales in West Virginia | Sales outside West Virginia |
|---|---|---|---|
| 1937 | $19,238,569.64 | $3,427,958.68 | $15,810,610.96 |
| 1938 | 16,513,210.81 | 2,736,147.17 | 13,777,063.64 |
| 1939 | 17,898,970.74 | 3,032,076.63 | 14,866,894.11 |

The above data expressed in percentages to total sales are as follows:

| Year | Total adjusted gas service revenues | Sales in West Virginia | Sales outside West Virginia |
|---|---|---|---|
| | *Percent* | *Percent* | *Percent* |
| 1937 | 100 | 17.8 | 82.2 |
| 1938 | 100 | 16.6 | 83.4 |
| 1939 | 100 | 16.8 | 83.1 |

5 The sales outside the State of West Virginia were to the following companies as shown in Schedule No. 4:

Fayette County Gas Company.
The Manufacturers Light & Heat Company.
The East Ohio Gas Company.
The Peoples Natural Gas Company.
The River Gas Company.

The first two companies in the above list are not associated with Hope Natural Gas Company; the remaining three companies are affiliated.

The examiners' adjustments to Gas Service Revenues comprise the following:

1939: Elimination of gas sales to Northwestern Ohio Natural Gas Company on December 30 and 31, 1939.

All years; (a) Elimination of refund to The Peoples Natural Gas Company for compressing gas from revenues and from compressor station expense.

(b) Elimination of the value of exchange gas delivered to Hope Construction and Refining Company.

(c) Elimination of transaction with Hope Construction and Refining Company for operation of gasoline plants as set forth in a separate study. For the purpose of this report, certain operations of Hope Construction and Refining Company have been consolidated with those of Hope Natural Gas Company and reflected as Residuals Credit instead of sales of gas, royalty income, etc.

1937 and 1938: (a) Transfer of customers' forfeited discounts and penalties to Other Gas Revenues.

6 (b) Elimination of the value of exchange gas delivered to United Fuel Gas Company. This has been credited to Gas Purchased to offset the amount of gas revenues from The Manufacturers Light & Heat Company. There was no exchange gas of this nature recorded as sales and purchases in 1939.

Following Schedule No. 4, is Sub-schedule No. 4-A, sheets 1 to 8, inclusive, which show further details with reference to the Gas Service Revenues for the year 1939. These sheets show the various towns and districts in which the domestic, commercial and industrial sales were made, and the various companies to which gas was sold for resale.

*Other Gas Revenues and Other Income.*

Details of Other Gas Revenues and Other Income for the years 1937, 1938 and 1939, per books, and as adjusted by the examiners of accounts are shown in Schedules Nos. 2 and 1, respectively.

The adjustments to the classes of income as shown in these Schedules are as follows:

1937 and 1938: Transfer of Customers' Forfeited Discounts and Penalties from Gas Service Revenues to Other Gas Revenues.

All years: (a) Elimination of revenue from processing natural gas. This has been adjusted through the Residuals Credit account as above described in connection with the operations of Hope Construction and Refining Company.

(b) Management fees have been transferred from Miscellaneous Gas Revenues to the various operating expense accounts to offset the costs of the services rendered.

(c) Transfer of tax adjustments to the credit of Taxes. These tax adjustments represent a share of West Virginia gross sales and income taxes that are imposed by the Company on its customers in conformity with the provisions of certain sales contracts.

(d) Elimination of book profit on property retired, sold, or abandoned, recorded on the books as Miscellaneous Nonoperating Revenues. The examiners of accounts have transferred these credits to the Reserve for Depreciation.

Schedule No. 5 is presented for the purpose of showing the various classes of nonoperating revenues as reflected by the Company's books for the years 1937 and 1938, and the manner in which the examiners of accounts have reclassified the items to bring them into comparable form with those as recorded for the year 1939.

*Operating Expenses.*

Schedule No. 3 is a detailed statement by accounts of Operating Expenses, Reclassified for the years 1937 and 1938, showing adjustments made thereto for the years 1937, 1938, and 1939. This schedule shows the totals in each group of accounts and may be summarized accordingly to give the effect of the adjustments made to them:

| Particulars | Net adjustments—Increase or decrease | | |
|---|---|---|---|
| | 1937 | 1938 | 1939 |
| Production | $80,057.92 | $174,191.68 | *890,107.18* |
| Other production | *1,130,748.61* | *498,413.24* | *115,589.70* |
| Transmission | *716,806.28* | *835,747.99* | *471,157.85* |
| Distribution | 245,086.93 | 221,229.83 | 233,057.84 |
| Customers' accounting and collection | *65.04* | *1,240.87* | *2,012.93* |
| Sales promotion | | | |
| Administrative and general | *256,556.49* | *298,068.71* | *784,960.98* |
| Total operating expenses | *1,828,831.50* | *933,049.30* | *1,448,087.91* |

Italic figures denote decrease.

By reference to Schedule No. 1 it will be noted that under the heading of Operating Revenue Deductions are included Accounts 503.1, Depreciation, 503.2, Amortization and Depletion of Natural Gas Lands and Land Rights, 504, Amortization of Other Limited-Term Gas Investments, and 507, Taxes. The net adjustments by the examiners in these accounts are as follows:

| Account | Net adjustments—Increase or decrease* | | |
|---|---|---|---|
| | 1937 | 1938 | 1939 |
| 503.1 | *$496,800.96* | *$224,064.08* | $14,640.95 |
| 503.2 | *17,761.53* | *685.96* | 18,372.47 |
| 504 | | *6,611.56* | |
| 507 | *265,015.32* | *143,734.12* | *209,058.10* |
| | *779,577.81* | *373,734.96* | *176,044.68* |

* Italic figures denote decrease.

*Taxes.*

Sheets 1, 2 and 3 of Schedule No. 8 show details with respect to the taxes accrued and/or paid by the Company during the years 1939, 1938 and 1937, respectively.

Columns (b), (c), and (d) show the total amount of taxes paid or accrued during each year, separating the amounts applicable to the current year from those applicable to other years. Column (e) shows the amount of social security taxes that were charged to accounts other than Taxes, such as Work in Progress, Accounts Receivable, etc. The balance charged to Taxes per books is shown in column (f).

It will be noted that the examiners' adjustments are shown in four columns. These are shown in this manner in order to separate the various adjustments to certain categories for ready reference. It will also be noted that the adjustments in three of the columns, namely, (g), (h), and (i) have been applied to the book amounts and an extension has been made to column (j), prior to the deduction of certain additional adjustments shown in column (k).

The taxes have been extended in the above described manner for a specific purpose. The amounts shown in column (j), (the first extension) are the actual taxes applicable to the operations for each of the years shown. The amounts shown in column (1), (Adjusted Taxes) represent the amounts of the corrected taxes after eliminating certain items shown in column (k), applicable to the following:

Specific distribution taxes:

Taxes not applicable to gas operations.

Nonrecurirng taxes.

Estimated amount of state taxes applicable to property devoted to the transportation of coke oven gas.

The specific distribution taxes and taxes not applicable to gas operations are the same as those designated as such by the Company in its Exhibit No. 37 (see pages 25, 32, and 39 of that Exhibit for the years 1937, 1938, and 1939, respectively). The nonrecurring taxes are certain taxes imposed by the State of Pennsylvania prior to the removal of the Company's offices from Pittsburgh, Pennsylvania, to Clarksburg, West Virginia. The social security taxes imposed by the State of Pennsylvania have not been eliminated because it is the opinion of the examiners of accounts that additional taxes will be assessed in the State of West Virginia which will be about equal to those paid to the State of Pennsylvania on account of the employees who were transferred.

The taxes on property devoted to the transportation of coke oven gas have been estimated on an overall percentage basis of the totals of property and applicable taxes.

Subschedule No. 8-A (sheets 1, 2, and 3) is presented for the purpose of reconciling the taxes per books for the years 1939, 1938, and 1937, respectively, with the amount per Company's Exhibit No. 37, and an additional reconcilement with the total taxes applicable to operations as per final tax settlements.

It will be noted that the Company has adjusted the Federal Income Taxes for the purpose of its Exhibit No. 37 so as to reflect a rate of 18% in each of the years 1937, 1938, and 1939, instead of the actual rates paid (see note L at page 43 of Exhibit No. 37). This adjustment has not been made by the examiners of accounts. The Federal Income Taxes shown in the final columns of Schedules Nos. 8 and 8-A are the actual amounts assessed for the respective years, based on the entire net income of the Company, and, incidentally, include the tax on net icome resulting from operations in West Virginia. The examiners of accounts have made no attempt to separate the amounts of Federal Income Taxes that are applicable to net income from West Virginia sales from the amount based on interstate net income.

The amounts appearing as Nonrecurring Expenses are normal recognized operating expenses of the Company, and include such items as rent, taxes, and other miscellaneous amounts. They have been removed from the operating expenses as they principally represent costs incurred when the main office of the Company was

located at Pittsburgh, Pennsylvania, and are not expected to occur in the future.

Exploration and Development Costs appearing in Schedule No. 1 is the last group of accounts taken into consideration before arriving at the Net Utility Income. The net change in this group of accounts is as follows:

| Account | Net adjustments—increase or decrease * | | |
|---|---|---|---|
| | 1937 | 1938 | 1939 |
| 510 | *$81,166.45* | *$78,957.04* | |
| 511 | | | |
| 512 | *36,555.26* | 18,553.91 | $45,164.20 |
| Total | *117,721.71* | *60,583.13* | 45,164.20 |

* Italic figures denote decrease.

The adjustments made to these accounts are discussed in a separate study that is entitled, Exploration and Development Costs.

Other Income appearing in Schedule No. 1 contains certain adjustments that include rearrangement of book profit on property retired, sold or abandoned, and taxes not applicable to natural gas operations.

12 Income Deductions appearing in Schedule No. 1 include adjustments made to revenue and operating expense accounts and the increase represents the net results of these accounting adjustments.

Volume II of this report, as stated hereinbefore, deals with adjustments made by the Examiners and includes a summary of all adjustments, together with adjusting entries and a detailed explanation of each.

Clarksburg, West Virginia, March 24, 1941.

[1] Volume on contract basis.

[2] Total volume billed to The East Ohio Gas Company was 33,907,672 mcf. According to a study of volumes by the Bureau of Engineering, the actual metered deliveries were 33,275,409 mcf. This difference is due to certain peculiarities in the billing method as provided in the sales contract. The billing is based on metered customers consumption rather than on the actual metered deliveries by Hope Natural Gas Company.

[3] No examiners' reclassification entry was made for this transfer of Hope Construction and Refining Company Exchange Gas from the book classification of "Drillers and Pumpers" to a separate account to segregate for the purpose of this schedule. It represents the exchange of 260,229 mcf of gas.

[Pages 22 to 44 omitted.]

# EXHIBIT NO. 67-A.—COMPARATIVE INCOME STATEMENTS FOR THE YEARS 1937, 1938, AND 1939, VOLUME II, F. P. C. WITNESSES NICHOLS AND REINHARD

[Pages 1 to 23 omitted]

## EXAMINERS' ADJUSTING ENTRIES

### ENTRY NO. 200

| | | Dr. | Cr. |
|---|---|---|---|
| Gas service revenues: | | | |
| 600<br>602.1 | Residential and commercial sales, 1937 | $20,825.01 | |
| | Residential and commercial sales, 1938 | 20,531.21 | |
| 602.2 | Industrial sales, 1937 | 520.58 | |
| | Industrial sales, 1938 | 623.84 | |
| 603 | Public street and highway lighting, 1937 | 6.84 | |
| 604 | Other sales to public authorities, 1937 | 16.85 | |
| | Other sales to public authorities, 1938 | 19.39 | |
| 608 | Other sales, 1937 | 160.07 | |
| | Other sales, 1938 | 134.14 | |
| Other gas revenues: | | | |
| 612 | Customers' forfeited discounts and penalties, 1937 | | $21,339.33 |
| 612 | Customers' forfeited discounts and penalties, 1938 | | 21,310.59 |
| To transfer from gas service revenues to other gas revenues, the amount of customers' forfeited discounts and penalties as determined from an analysis of gas sales for the years 1937 and 1938. | | | |

### ENTRY NO. 201

| | | | |
|---|---|---|---|
| 608.2 | Sales to other gas utilities (non-aff.), 1937 | $920,095.47 | |
| | Sales to other gas utilities (non-aff.), 1938 | 244,603.80 | |
| 734.12 | Gas purchased from others, 1937 | | $771,048.80 |
| | Gas purchased from others, 1938 | | 205,777.80 |
| 764.2 | Joint expenses—Cr., 1937 | | 146,046.87 |
| | Joint expenses—Cr., 1938 | | 38,826.00 |
| To reduce revenues and expenses during the years 1937 and 1938 by the amounts representing gas taken from one subsidiary of Columbia Gas and Electric Corporation (United Fuel Gas Co.) and delivered to another of its subsidiaries (The Manufacturers Light & Heat Co.) at a different location. These transactions are recorded on the books as purchases of gas at one price per Mcf and sales at a price of 5¢ per Mcf in excess of that at which purchased. This differential is represented as a charge for transporting the gas. | | | |
| For the purpose of this report, the purchases and sales have been reduced by the amount of these transactions and the amount represented by 5¢ per Mcf is credited to Joint Expenses—Cr. to offset the costs of handling this gas. | | | |

ENTRY NO. 201—Continued

| | | Dr. | Cr. |
|---|---|---|---|
| 25. | Following is a summary of the purchases and sales as recorded: | | |

| Year | Total Mcf. | Recorded sales | Recorded purchases | Difference |
|---|---|---|---|---|
| 1937 | 2,920,938 | $926,095.47 | $774,048.60 | $146,046.87 |
| 1938 | 776,520 | 244,603.80 | 205,777.80 | 38,826.00 |

The amounts affecting accounts 605.2 and 754.12 are included as an adjustment in Exhibit 37, pages 20, 23, 27 and 30, column 5.

ENTRY NO. 202

| | | | |
|---|---|---|---|
| 605.1 | Sales to other gas utilities (affiliated) 1937 | $105,180.39 | |
| | Sales to other gas utilities (affiliated) 1938 | 86,116.35 | |
| | Sales to other gas utilities (affiliated) 1939 | 115,923.12 | |
| 759.1211 | Pumping station supplies and expenses 1937 | | $105,180.39 |
| | Pumping station supplies and expenses 1938 | | 86,116.35 |
| | Pumping station supplies and expenses 1939 | | 115,923.12 |

To reduce revenues and expenses by the amount paid to The Peoples Natural Gas Co. in consideration for compressing gas sold to that company, under the provisions of the sales contract dated May 8, 1937. Article Eighth of said agreement provides that: "In view of the fact that at the present time gas cannot at all times and as to the full amount required, be delivered by the Hope Company at such pressures, the Peoples Company finds it necessary to recompress all of a part of such gas at its Brave Compressing Station in Greene County, Pennsylvania. The Hope Company therefore agrees that so long as the Peoples Company finds it necessary to maintain such compressing station it will pay the Peoples Company (to be applied in reduction of the price hereinabove provided) the sum of three (3¢) cents per thousand cubic feet of gas delivered hereunder * * *"

The above entry gives effect to the reduction of the price of the gas as provided in the part of the agreement quoted above: Volumes as follows:

| Year | Sales Mcf. | Compressed by Peoples Mcf. |
|---|---|---|
| 1937 | 3,506,013 | 3,506,013 |
| 1938 | 2,870,345 | 2,870,345 |
| 1939 | 3,864,104 | 3,864,104 |

ENTRY NO. 203

| | | | |
|---|---|---|---|
| 608 | Other sales, 1937 | $76,782.24 | |
| 608 | Other sales, 1938 | 74,392.18 | |
| 608 | Other sales, 1939 | 72,387.58 | |
| 754.11 | Natural gas purchased from Aff. Cos., 1937 | | $69,843.29 |
| 754.11 | Natural gas purchased from Aff. Cos., 1938 | | 67,693.70 |
| 754.11 | Natural gas purchased from Aff. Cos., 1939 | | 65,881.85 |
| 764.2 | Joint transmission expenses—Cr., 1937 | | 6,938.95 |
| 764.2 | Joint transmission expenses—Cr., 1938 | | 6,698.48 |
| 764.2 | Joint transmission expenses—Cr., 1939 | | 6,505.73 |

ENTRY NO. 203—Continued

| | Dr. | Cr. |
|---|---|---|
| To reduce revenues and expenses by the amount of gas exchanged with Hope Construction and Refining Company and recorded on the books as purchases and sales of gas. | | |
| The gas delivered to Hope Construction and Refining Company was used by that Company in its oil production operations and returned to Hope Natural Gas Company at reduced pressures. A price differential of 2½¢ per Mcf between the recorded selling price and the repurchase price is regarded as the out-of-pocket expenses for recompressing the gas. | | |
| For the purpose of this report the amount representing the recompressing cost is credited to Joint expenses—Cr. | | |
| Following is a summary of the purchases and sales as recorded: | | |

| Year | Total Mcf. | Total sales amount | Repurchase amount | Difference |
|---|---|---|---|---|
| 1937 | 277,558 | $76,782.24 | $69,843.29 | $6,938.95 |
| 1938 | 267,939 | 74,392.18 | 67,693.70 | 6,698.48 |
| 1939 | 260,229 | 72,387.58 | 65,881.85 | 6,505.73 |

| | | |
|---|---|---|
| The amounts affecting accounts 608 and 754.11 are included as an adjustment in Exhibit 37, pages 20, 23, 27, 30, 34, and 37. | | |

27 ENTRY NO. 204

| | | |
|---|---|---|
| 619.6 Miscellaneous gas revenues—Gas sales contract adjustments, 1938 | $22,274.17 | |
| 619.6 Miscellaneous gas revenues—Gas sales contract adjustments, 1937 | 27,597.24 | |
| 755.2 Gas purchased supplies and expenses, 1938 | | $16,345.41 |
| 755.2 Gas purchased supplies and expenses, 1937 | | 14,212.75 |
| 507 Taxes, 1938 | | 5,928.76 |
| 507 Taxes, 1937 | | 13,384.49 |
| To transfer tax adjustments to the accounts affected during the years 1937 and 1938 by the amount of West Virginia Production and Sales taxes that were billed to others as provided in purchase and sales contracts. Such contracts provide for the sharing by vendors and vendees of taxes imposed on the production and sale of gas. In the case of taxes applicable to purchase contracts, they are herein transferred to Gas Purchase Expense account and thereby netted against certain similar taxes paid to vendors to partially reimburse such vendors for taxes imposed. In the case of taxes applicable to sales contracts, they are herein credited to the Taxes account, thereby reflecting in that account the net amount of taxes imposed on the respondent company for the production and sale of gas in West Virginia. | | |
| The adjustment for the year 1937 includes a refund from the State of West Virginia in the amount of $376.48 for an overassessment. | | |
| These taxes are summarized as follows: | | |
| 1938: | | |
| Taxes billed others on purchase contracts | $16,345.41 | |
| Taxes billed others on sales contracts | 5,928.76 | |
| Total, 1938 | 22,274.17 | |
| 1937: | | |
| Taxes billed others on purchase contracts | 14,212.75 | |
| Taxes billed others on sales contracts | 13,008.01 | |
| Refund from State of West Virginia | 376.48 | |
| Total, 1937 | 27,597.24 | |
| During the year 1939, the taxes billed others on purchase contracts were classified in the same manner as this adjustment. | | |

ENTRY NO. 205

| | Dr. | Cr. |
|---|---|---|
| Gas service revenues, 1939: | | |
| 600 Residential sales | $35.04 | |
| Gas service revenues: | | |
| 602.1 Commercial sales | | $34.78 |
| 602.2 Industrial sales | | .26 |

To adjust the above accounts as shown by the general ledger control accounts so as to agree with the details supporting said accounts as shown in the Company's analysis of gas sales. These differences are represented by Minimum Charges and Service Charges which were apparently posted to the wrong control account. The details are as follows:

| | Details | Sales summary | Difference |
|---|---|---|---|
| Minimum charges: | | | |
| Residential sales | $4,124.96 | $4,160.50 | $35.54 |
| Commercial sales | 1,315.94 | 1,280.66 | 35.28 |
| Industrial sales | 24.18 | 23.92 | .26 |
| Service charges: | | | |
| Residential sales | 4,985.18 | 4,984.68 | .50 |
| Commercial sales | 380.96 | 381.46 | .50 |
| | 10,831.22 | 10,831.22 | |

ENTRY NO. 206

| | Dr. | Cr. |
|---|---|---|
| Gas service revenues, 1939: | | |
| 605.2 Sales to other gas utilities (non-affiliated) | $5,460.00 | |
| 242 Other deferred credits | | $5,460.00 |

To transfer to the latter account, the amount of gas sales to Northwestern Ohio Natural Gas Company on December 30 and 31, 1939. These sales are reflected in the income account of Reserve Gas Co. which was merged with Hope Natural Gas Co. on December 30, 1939. This entry is included as an adjustment in Company Exhibit 37, page 34, column 5.

ENTRY NO. 207

| | Dr. | Cr. |
|---|---|---|
| 146 Other deferred debits, 1939 | $124.77 | |
| 734.12 Gas purchased | | $11.66 |
| 739.11 Compressor station labor | | 113.11 |

Elimination of expenses applicable to Reserve Gas Company which were incurred on December 30 and 31, 1939 after the merger of said Company with Hope Natural Gas Company. This entry is included in Exhibit 37, page 37, column 5.

29 ENTRY NO. 208

| | Dr. | Cr. |
|---|---|---|
| 619.6 Miscellaneous gas revenues—Gas sales, 1939 | $10,768.35 | |
| 507 Contract adjustments taxes, 1939 | | $10,768.35 |
| West Virginia production and sales taxes billed others as provided in sales contracts. These taxes are recorded on the books as miscellaneous gas revenues and this adjustment transfers the credits to the account to which such taxes were charged when paid to the State of West Virginia. | | |
| The sales contracts provide for reimbursement by the vendee for certain taxes imposed on the production and sale of gas. | | |

ENTRY NO. 209

| | | |
|---|---|---|
| 735.2 Gas purchased supplies and expenses, 1938 | $12,280.14 | |
| 735.2 Gas purchased supplies and expenses, 1937 | 10,204.73 | |
| 538 Miscellaneous income deductions, 1938 | | $12,280.14 |
| 538 Miscellaneous income deductions, 1937 | | 10,204.73 |
| West Virginia taxes on production and sales of gas paid to others as provided in certain purchase contracts wherein it is stipulated that the imposition of such taxes will be shared alike by vendor and vendee. The amounts herein represent the respondent company's portion of taxes imposed by the State of West Virginia on certain vendors. | | |
| During the year 1939, the books reflect these taxes in the manner as herein adjusted for the years 1937 and 1938. | | |

ENTRY NO. 210

| | | |
|---|---|---|
| 526 Miscellaneous nonoperating revenues, 1938 | $910.26 | |
| 526 Miscellaneous nonoperating revenues, 1937 | 16,463.51 | |
| Reserve for depreciation of— | | |
| 250.1 Gas plant, 1938 | | $910.26 |
| 250.1 Gas plant, 1937 | | 1,599.52 |
| 512 Abandoned leases, 1937 | | 14,863.99 |
| To transfer from nonoperating revenues, the amounts recorded therein representing book profit on property retired, sold, or abandoned during the years 1937 and 1938. | | |
| The amount credited to account 512 represents a book profit on the sale of unoperated leases. | | |

To eliminate from operating expenses additional expenses and taxes applicable to the transportation of coke oven gas not eliminated in Company Exhibit 37. These expenses were determined by first computing the ratio of property costs used for transportation of coke oven gas to the total property cost in each of the property accounts removed from the rate base, and then using the same ratio to the over-all operating expenses applicable to the operation and maintenance of said property. Details in statement attached.

39 ***Statement of adjustments to operating expenses and taxes related to the original cost of property used to transport coke-oven gas from Domestic Coke Corporation that were eliminated from the rate base and omitted in Exhibit No. 37***

| Property account number | Original cost of property | | Ratio | Oper. exp. acc't No. | Year | Total oper. exps. | Ratio applied | Amount of adjustment |

To reinstate in the operating expenses of the Company, the value of coke oven gas used at Hastings Station for boiler fuel.

This coke oven gas, supplied by Domestic Coke Corporation, has a heating value of slightly over 500 B. T. U., and natural gas having a heating value of about 1100 B. T. U., it is therefore determined that 5/11 of $.12, which price was recommended by the Bureau of Engineering, is to be used in arriving at the cost of the coke oven gas.

| 132 | Prepayments (prepaid taxes) | $14,500.00 | |
| 228 | Taxes accrued—December 31, 1939 | | $14,500.00 |

To increase Federal capital stock tax for the period Jan. 1, 1940 to June 30, 1940 from $13,000 (amount shown per books) to $27,500. The latter amount represents one-half the amount of $55,000 reported in the tax return for the fiscal year July 1, 1939 to June 30, 1940.

Although this tax is not paid, the policy of the Company is to accrue the entire amount of estimated taxes for the fiscal year and at the end of the calendar year, charge one-half to operating taxes and the other half to prepaid taxes.

51

ENTRY NO. 242

| | | | |
|---|---|---|---|
| 538 Miscellaneous income deductions, 1938 | | $6,611.56 | |
| 504 Amort. of other lim.-term gas invest., 1938 | | | $6,611.56 |
| To remove from the provisions for depreciation and depletion, patent rights, and licenses as recorded on the books of the Company at Dec. 31, 1938. This amount covered an accumulation of expenditures for patents on gasoline, butane, and propane processes. The amount was charged off through the instigation of Price, Waterhouse & Co., details and authority contained in Company Voucher M96 (1938), for the reason that the term of such rights and licenses expired in prior years. | | | |

ENTRY NO. 243

| | | |
|---|---|---|
| Distribution expenses, depreciation, 1939 | $82,000.00 | |
| Distribution expenses, depreciation, 1938 | 82,267.50 | |
| Distribution expenses, depreciation, 1937 | 80,555.84 | |
| 303.1 Depreciation, 1939 | | 82,000.00 |
| Depreciation, 1938 | | 82,267.50 |
| Depreciation, 1937 | | 80,555.84 |
| To segregate for the purpose of this report the depreciation that applies to the distribution operating property of the Company. | | |

ENTRY NO. 244

| | | Dr. | Cr. |
|---|---|---|---|
| 745 | Gas-well royalties, 1938 | $78, 937. 04 | |
| | Gas-well royalties, 1937 | 81, 166. 45 | |
| 510 | Delay rentals, 1938 | | $78, 937. 04 |
| | Delay rentals, 1937 | | 81, 166. 45 |

To transfer payments made in lieu of drilling leaseholds. Prior to the adoption of the 1939 system of accounts prescribed by the State of West Virginia, these payments were included in Account 762, Rental on Unoperated Leases. In reclassifying the years 1937 and 1938, the above amounts are eliminated from this account and added to Account 761, Gas-well royalties, thereby giving the comparable effect to the 1939 Classification of Accounts. These entries are identical with those appearing in Company's Exhibit No. 37, pages 22 and 29, column 5, and are discussed in detail in the Exploration and Development Cost Exhibit.

Details as follows:

| Year | Rel. | Description | Amount |
|---|---|---|---|
| 1937 | Sun. Vou | Total charges for the year | $81, 166. 45 |
| 1938 | do | do | 78, 937. 04 |
| | | | 160, 103. 49 |

| | Abandoned leases, 1938 | | 40, 678. 77 |
| | Abandoned leases, 1937 | | 40, 683. 22 |

This adjustment is to reverse the provisions for depreciation and depletion, as recorded on the books of the company, from the above reserve account during the years 1937, 1938, and 1939, preparatory to setting up the annual depreciation and depletion expense computed by the examiners. Entries No. 245 to 248, inclusive, and Entry No. 250 are from the depreciation and depletion study.

| 312 | Abandoned leases, 1937 | 19,824.10 | |
| 250.1 | Reserve for deprec. of gas plant as of 12/31/39 | | $23,067.31 |
| 250.1 | Reserve for deprec. of gas plant as of 12/31/38 | | 61,828.01 |
| 250.1 | Reserve for deprec. of gas plant as of 12/31/37 | | 19,824.10 |
| | To transfer from the above reserve account the recorded losses for abandoned leases during the years 1937, 1938, and 1939. | | |

Docket G-113

56

ENTRY NO. 249

| | | | |
|---|---|---|---|
| 312 | Abandoned leases, 1939 | $22,096.89 | |
| 100.4 | Gas plant held for future use as of 12/31/39 | | $22,096.89 |
| | To set up the adjustment to abandoned leases as developed in a separate study of exploration and development costs for the period 1902 to 1939, inclusive, that portion applicable to the year 1939. For details see Exploration and Development Cost Study. | | |

ENTRY NO. 250

| | | | |
|---|---|---|---|
| 250.3 | Reserve for abandoned leases as of 12/31/38 | $104,811.48 | |
| 271 | Earned surplus (see detail) | | $104,811.48 |
| | To transfer from the above reserve account the adjustment to abandoned leases (prior to Dec. 31, 1938) as developed in the Company's original cost study, for the reason that the examiner had not provided an amortization reserve for nonproductive acreage. The $104,811.48 has been allocated to the yearly charges to Account 312 in the study of Exploration and Development Costs as follows: | | |
| | Period prior to 12/31/38 $101,384.00 | | |
| | Year 1938 (Credit Acct. 312) 2,593.33 | | |
| | Year 1937 (Credit Acct. 312) 832.15 | | |
| | As above $104,811.48 | | |

[Pages 57 to 74 omitted.]

1 **EXHIBIT NO. 78.—OPERATIONS DATA FOR THE YEAR ENDED DECEMBER 31, 1940, F. P. C. WITNESS DUNN**

## WRITTEN STATEMENT

This report on 1940 operations is a continuation of other accounting exhibits to December 31, 1940. The schedules and adjustments have been prepared by the same examiners of account who prepared similar adjustments in the reports for prior years. The examiners' adjustments, all being the same nature as those included and explained in other exhibits, are, therefore, given the same identifying entry numbers.

A detailed audit was not made for the year 1940 as the adjustments developed for the preceding years served as a guide to determine which accounts required examination; thus the investigation was limited accordingly.

In all matters affecting the 1940 operations the examiners have considered the following stipulation:

**STIPULATION**

It is hereby stipulated by and between Counsel for the Hope Natural Gas Company and Counsel for the Federal Power Commission that the attached statement represents the 1940 revenues and expenses per books of the Hope Natural Gas Company, exclusive of revenues and expenses per books with respect to the merged Reserve Gas Company.

The stipulated amounts are set forth in the examiners' income statement and supporting schedules. Adjustments are applied after giving effect to the stipulated amount.

2 *Changes in Plant Accounts.*

Schedule No. 7—Summary of Utility Plant Investment as at December 31, 1940, sets forth the recorded additions during 1940 in the amount of $1,910,483.01 and the recorded retirements in the amount of $944,949.71 applicable to Gas Plant, exclusive of Distribution Plant, resulting in a net increase of $965,533.30.

*Changes in Depreciation and Depletion Reserves.*

Schedule No. 8, Depletion and Depreciation Expense for the Year Ended December 31, 1940, sets forth the annual expense

484807—42——19

computed by methods and rates consistent with all other years. Depreciation expense is almost the same, in amount, as the years immediately preceding, but depletion expense increased in excess of $230,000.00 over 1939. This is due to increased production in 1940.

The balance in the reserves applicable to gas plant in service, excluding distribution plant, shows an increase at December 31, 1940, as follows:

| | |
|---|---|
| Balance, Dec. 31, 1939 | $24,072,167.17 |
| Provision for 1940 | 1,480,947.16 |
| Net charge to Reserves 1940 | (869,843.37) |
| Balance, Dec. 31, 1940 | 24,683,270.96 |

3 The net increase of $611,103.79 offsets somewhat the above-mentioned net increase in plant accounts of $965,533.30.

*Gasoline Operations of Hope Construction and Refining Company.*

Schedules Nos. 9, 9a, 9b and 9c explain in detail examiners' adjusting entries Nos. 213, 214, 215, 216, and 217 which record the effect of Hope Construction and Refining Company's West Virginia gasoline and butane operations during the year 1940.

Schedule No. 9 is a condensed earnings statement of the West Virginia gasoline department, and is divided to show by accounts, the earnings per books, the examiners' adjustments thereto, and the earnings as adjusted. Schedule No. 9a is similar in form and content and presents the same information for the butane operations.

Schedule No. 9b lists the adjustments shown on these earnings statements and explains each adjustment.

Schedule No. 9c shows a condensed summary of investment in West Virginia gasoline and butane plant, the related reserve for depreciation, and the average net investment for the year 1940.

These four schedules present in condensed form for the year 1940, similar information shown in Exhibit No. 63 for
4 the years 1937, 1938, and 1939. In preparing these schedules the same procedures were followed, the same earnings statements adjusting entries were made, and the same investment in plant was used as those for prior years.

The adjusted plant balances as of January 1, 1940, shown on Schedule No. 9c, are taken from balances shown in Exhibit No. 63 for December 31, 1939. The only adjustments to the 1940 plant changes recorded on the books of account were those made

to eliminate retirements of plant or parts of plant which had been previously retired by examiners' adjusting entries in Exhibit No. 63. The working capital requirement used in these schedules is that developed in Exhibit No. 63.

Pending the Commission's consideration and determination of a fair rate of return on gasoline investment, six percent has been used in this study.

Schedule No. 9d is a condensed earnings statement of the Kennedy gasoline extraction plant. This plant was formerly owned by the Reserve Gas Company and was acquired by Hope Construction and Refining Company December 31, 1938. In order to present the factual conditions as they existed in the four-year period 1937–1940, Exhibit No. 63 and this exhibit include this plant in the investment for 1939 and 1940 and its earnings in the income statement for those years. However, the investment and depreciation schedules separate the Kennedy plant from the other West Virginia plants.

This schedule is presented to show the revenues, expenses, and net earnings of this plant, since, by stipulation between counsel, the earnings of and investment in the merged Reserve Gas Compay have been excluded from Hope Natural Gas Company earnings during the year 1940.

Schedule No. 9e, "Gasoline Sales by Plants," shows that the average price per gallon received from gasoline sales from West Virginia plants to Standard Oil Company was $0.0179, producing revenues of $64,930.90, while the average price of sales to others was $0.0316. Had the sales to Standard met the average price of sales to others, the revenue produced would have been $114,517.42, or an increase of $49,586.52. The explanation made by company officers is that gasoline is sold to Standard Oil Company at dump prices due to insufficient storage facilities of Hope Construction and Refining Company.

*Income Statement.*

Gas operating revenues and net utility income show a marked increase in 1940. This is shown in a comparison of the adjusted income statements:

| | 1937 | 1938 | 1939 | 1940 |
|---|---|---|---|---|
| Operating revenues | $19,323,830 | $16,575,856 | $17,967,666 | $22,839,601 |
| Operating expenses | 12,506,400 | 12,146,434 | 11,607,652 | 12,936,127 |
| Depreciation and depletion | 1,387,649 | 1,294,613 | 1,257,783 | 1,486,943 |
| Taxes | 1,318,110 | 1,001,688 | 1,227,674 | 2,034,284 |
| Nonrecurring expenses | 45,286 | 51,120 | 69,257 | 89,660 |
| Exploration and development costs | 501,076 | 612,242 | 500,344 | 407,926 |
| Total deductions | 15,758,520 | 15,106,097 | 14,662,709 | 16,954,933 |
| Net utility income | 3,565,310 | 1,469,759 | 3,304,957 | 5,884,668 |

Schedule No. 1 is an Income Statement for the Year 1940, showing deductions in accordance with the above-mentioned stipulation, and adjustments made thereafter. Consideration in the adjustments is given to the exclusion of income and expense items applicable to the former Reserve Gas Company.

Attention is directed to the stipulated amounts applicable to the Hope Company as shown in column (e) and As Adjusted, column (h). It will be noted that the adjusted amount of net utility income is $949,222.01 greater than the company's books as stipulated for the year 1940. This increase is accounted for by a decrease, through examiners' adjustments, in Operating Revenue, Operating Revenue Deductions, setting out Nonrecurring Expenses and an increase in Exploration and Development Costs. The accounts contained in each group are treated individually in Schedules Numbers 1, 2, and 3, and are summarized below:

| Particulars | Examiners' Adjustments Increase or (Decrease) |
|---|---|
| Operating Revenues | *$603,563.19 |
| Operating Revenue Deductions | *1,654,867.23* |
| Nonrecurring Expenses | 89,650.60 |
| Exploration and Development Costs | 12,422.43 |
| Increase in Net Utility Income | 949,222.01 |

For the purpose of further clarifying the application of examiners' adjustments as shown in Exhibit 67 as well as those shown in this exhibit, the following table is presented. This table shows the net adjustments to Net Utility Income for the years 1937 to 1940, inclusive, and the groups of accounts concurrently affected.

*Italic figures denote decrease.

| | 1937 | 1938 | 1939 | 1940 |
|---|---|---|---|---|
| Net utility income (increase) | $1,200,855.94 | $585,417.59 | $1,021,588.64 | $949,222.01 |
| Other income (debit) | 18,777.14 | 3,882.03 | 2,741.31 | 3,218.10 |
| Income deductions | 320,814.60 | 280,605.58 | 284,492.41 | 306,522.23 |
| Net income transferred to surplus [1] | 861,294.20 | 300,929.98 | 734,354.92 | 639,481.68 |
| | 1,200,885.94 | 585,417.59 | 1,021,588.64 | 949,222.01 |

[1] These amounts have a corresponding effect on the balance sheet.

The increase in Net Income Transferred to Surplus, arising from examiners' adjustments for the year 1940, amounting to $639,481.68, is summarized in Schedule No. 1-A, which shows the various balance sheet accounts affected thereby.

8 *Gas Service Revenues.*

The gas service revenues per books, company's stipulation and as adjusted are presented in Schedule No. 4. This schedule shows the number of customers at December 31, 1940, the volume on the sales contract basis and the average rate per MCF in addition to the dollar amounts of gas sales. The company's analysis of gas earnings was used as the basis for compilation of this statement.

The adjusted gas service revenues, showing the amount of sales in the State of West Virginia and those outside the State and their percentage relationship, are as follows:

| | Gas service revenues | Sales in West Virginia | Sales outside West Virginia |
|---|---|---|---|
| Amount | $22,732,430.02 | $3,435,675.16 | $19,296,754.86 |
| Percent | 100% | 15.1% | 84.9% |

The sales outside the State of West Virginia were made to the following companies as shown in Schedule No. 4:

Fayette County Gas Company.
The Manufacturers Light & Heat Company.
The East Ohio Gas Company.
The Peoples Natural Gas Company.
The River Gas Company.

The last three of these companies are associated with Hope Natural Gas Company.

9 The examiners' adjustments of gas service revenues relating to Hope Construction and Refining Company and The Peoples Natural Gas Company for 1940 are in conformity with the explanation shown on page 5 of Exhibit 67 and indicated as "All years (a) (b) (c)."

*Other Gas Revenues and Other Income.*

The accounts within these groups, shown in Schedules Nos. 1 and 2, were adjusted substantially the same as in Exhibit 67, explained on pages 6 and 7 of that exhibit as "All years (a) (b) and (c)."

*Operating Revenue Deductions.*

Schedule No. 3 is a detailed statement of operating expenses, showing adjustments made thereto for the year 1940. This schedule shows the individual accounts, grouped by functional divisions. The net effect of the adjustments by divisions is summarized as follows:

| Particulars: | Net adjustments—Dr. increase or (cr.) decrease |
|---|---|
| Production | $213,287.39 |
| Other production | *112,227.25* |
| Transmission | *676,362.44* |
| Distribution | *251,595.20* |
| Customers accounting and collection | *1,009.01* |
| Sales promotion | |
| Administrative and general | *814,117.21* |
| Total operating expenses | *$1,565,498.10* |

10 Attention is directed to Schedule No. 1 which includes under the heading of Operating Revenue Deductions accounts adjusted by the examiners as follows:

| Account: | | Net adjustments—Dr. increase or (cr.) decrease |
|---|---|---|
| 503.1 | Depreciation | $114,444.73 |
| 503.2 | Amort. & depl. of P. N. G. L. & L. R. | *38,700.14* |
| 504 | Amort. of other L. T. G. I. | |
| 507 | Taxes | *242,514.00* |
| | | *$89,369.13* |

Following examiners' adjustment No. 246 are the details supporting the revised depreciation and depletion expenses as set forth in Schedule No. 1.

Schedule No. 6 summarizes the taxes accrued or paid by the company during the year 1940. This summary shows the total

*Italic figures denote decrease.

amount of taxes paid or accrued during the year and segregates the amounts applicable to the current year and those applicable to other years in columns (b), (c), and (d). Columns (e) and (f) set out the amounts eliminated as applicable to the former Reserve Gas Company. The resulting balances applicable to Hope Natural Gas Company are comparable to years 1937, 1938, and 1939, before adjustments. Columns (g) and (i) contain the examiners' adjustments and are shown in this manner to separate the various adjusted taxes into certain categories, i. e., the
11 amount of taxes chargeable to tax expense during 1940 in the ordinary course of operations as shown in column (h) and the balance as shown in column (j) after special treatment for rate making purposes by eliminating certain specific distribution taxes, nonrecurring taxes, etc. The adjustments to reflect the latter, which are included in column (i), are as follows:

Estimated amount of State taxes applicable to property devoted to the transportation of coke oven gas.

Taxes paid and accrued on West Virginia property not applicable to gas operations.

Fee paid Public Service Commission of West Virginia.

Distribution system taxes.

Taxes not applicable to gas operations.

Nonrecurring taxes.

Miscellaneous city taxes.

The taxes have been treated in the same manner as for the years 1937, 1938, and 1939, and Schedule No. 6 in this report is a continuation of Schedule No. 8, appearing in Exhibit 67.

The amounts set out as "Nonrecurring Expenses" in Schedule No. 1 are recognized as operating expenses of the Company.
12 They include such items as rent at Pittsburgh, Pennsylvania, proportion of World's Fair Exhibit, loss on experimental liquefying gas plant, moving expenses in connection with the transfer of the company's general office from Pittsburgh, Pennsylvania, to Clarksburg, West Virginia, and Pennsylvania Foreign Franchise and Net Income taxes. For purposes of this report these expenses have been segregated into a single caption, as expenses of this nature are not expected to occur in the immediate future.

*Exploration and Development Costs.*

This group of accounts, appearing in Schedule No. 1, is the last taken into consideration before arriving at Net Utility Income.

The only adjustment made in this group is one in the amount of $12,422.43 charged to Account 512, Abandoned Leases. It is caused by the transfer from Account 250.1, Reserve for Depreciation of Gas Plant, and represents the losses for abandoned leases during the year 1940.

*Other Income.*

This subdivision, appearing in Schedule No. 1, contains an adjustment for taxes not applicable to natural gas operations. This is the only adjustment in this group of accounts.

13 *Income Deductions.*

The adjustments in this group of accounts are all reflected in Account 538, Miscellaneous Income Deductions. They represent the concurrent debit and credit amounts of adjustments to income and expense accounts that affect the Net Utility Income, but which have no effect on the net income transferred to surplus. Details of these adjustments are shown in Schedule No. 7.

## HOPE CONSTRUCTION AND REFINING COMPANY

### *Earnings Statement—Adjusting Entries Year 1940*

| | Dr. | Cr. |
|---|---|---|
| 1 | | |
| Hope Natural Gas Company | $88,393.17 | |
| Operating expenses—Gasoline—W. Va. | | $62,435.67 |
| Operating expenses—Butane | | 25,957.50 |
| To reverse the royalty paid to the above company on the contractual basis of ⅛ of the net gasoline sales for the year 1940. This royalty was charged to gasoline and butane expenses under account "Gas Purchased." The purpose of this entry is to present the net revenue of the West Virginia gasoline and butane departments excluding royalties. | | |
| 2 | | |
| Operating expenses—Gasoline—W. Va. | 119,592.32 | |
| Hope Natural Gas Company | | 119,592.32 |
| To reverse the charges against the above company for vent gases returned to that company. According to the Commission Engineers these vent gases are the property of the Hope Natural Gas Company and no charge should have been made by the Hope Construction and Refining Company for the return of these gases. The revenue derived from this charge was credited to gasoline operating expenses, account "Vapor Fuel Earnings." | | |
| 3 | | |
| Operating expenses—Gasoline—W. Va. | 78,676.95 | |
| Operating expenses—Butane | 12,574.19 | |
| Operating expenses—Gasoline—W. Va. | | 52,102.81 |
| Operating expenses—Butane | | 12,861.68 |
| Surplus | | 26,286.65 |
| To reverse entries recording annual depreciation, profits, or loss on plant and equipment retired, and profit or loss on sale of capital assets, and to set up depreciation expense on West Virginia gasoline and butane investment based on rates furnished by Commission Engineers, per the following detail: | | |

| | Per books | Per examiners | Adjustment |
|---|---|---|---|
| (a) | (b) | (c) | (d) |
| Year 1940: | | | |
| Operating expenses—gasoline—W. Va.: | | | |

| Amounts adjusted above | $1,220,073.33 | $18,363.86 |
| Amounts applicable to Reserve Gas Company | 128,967.51 | 6,816.14 |
| Amounts applicable to distribution system | 89,345.10 | |
| | 1,438,385.94 | 25,200.00 |

ENTRY NO. 246

| | Dr. | Cr. |
|---|---|---|
| 503.1 Depreciation | $1,423,883.16 | |
| 503.2 Depletion of P. N. G. L. & L. R. | 57,084.00 | |
| 250.1 Reserve for depreciation of gas plant | | $1,423,883.16 |
| 250.2 Reserve for depletion of P. N. G. L. & L. R. | | 57,084.00 |

To set up in the income statement for 1940 the annual depreciation and depletion expense as computed by the F. P. C. examiners.

The depreciation expense for the year 1940 has been computed on the investment in plant accounts at Jan. 1, 1940, instead of the average investment for the year. Details of additions and retirements for the year 1940 have not been investigated.

53 Depletion expense for the year 1940 has been computed as shown on the attached sheet. The average cost per MCF of gas produced was found for the years 1937, 1938, and 1939 by dividing the annual expense by the annual production. The depletion expense per MCF of gas produced was found to remain practically uniform for the period. Therefore, the average for the above-mentioned years was applied to the estimated production for 1940.

The estimate of 26,800,000 MCF of gas produced in 1940 was determined by the Bureau of Engineering, excluding the estimated production from the former Reserve Gas Company properties.

## Depletion Expense for the Year Ended Dec. 31, 1940

| | Total 1937-1938-1939 | Actual | | | Estimated 1940 |
|---|---|---|---|---|---|
| | | 1937 | 1938 | 1939 | |
| Gas produced—MCF | 51,106,896 | 20,013,836 | 14,546,830 | 16,546,230 | 26,800,000 |
| Annual depletion expense: | | | | | |
| Operated acreage | $109,884.17 | $40,703.36 | $31,407.84 | $36,772.47 | $57,084.00 |

| 20.1 Reserve for deprec. of gas plant as of 12/31/41 | | $12,422.43 |
| To transfer from the above reserve account the recorded losses for abandoned leases during the year 1940. This entry is given the same number as the comparable entry appearing in F. P. C. exhibit number 67A. | | |

## EXHIBIT NO. 83-A.—ALLOCATION OF COST OF SERVICE, YEAR 1940, OF THE HOPE NATURAL GAS COMPANY, F. P. C. WITNESS LYON

### WRITTEN EXPLANATORY STATEMENT

This exhibit has been compiled and is presented to show for the year 1940 alone, information similar to that presented in a previous exhibit entitled "Allocation of Average Annual Cost of Service, Years 1937 to 1940, Inclusive, of the Hope Natural Gas Company."

The sources of information and the method of compilation of the tables in this exhibit have been the same as those of the previous exhibit, except as noted, and all statements made in connection with the previous exhibit apply with equal force to these tables. The working papers supporting the tables in this exhibit are the same as those supporting the previous exhibit covering the four years 1937–1940 inclusive.

The allocation of capacity costs in this exhibit, being for the one year 1940, has been based on the actual peak responsibility on the day of January 18, 1940 and the allocation of the volumetric costs has been based on the volume of deliveries during the calendar year 1940.

This exhibit incorporates, with appropriate notation, an additional minor adjustment relative to the elimination of incidental gas revenues of the former Reserve Gas Company during 1940 not made in the four year allocation, in order that this exhibit be in complete conformity with the exhibit of the accounting examiners of the Commission for the operations of the company during the year 1940 exclusive of the former Reserve Gas Company.

Signed WM. H. LYON,
William H. Lyon.

Dated, May 31, 1941, at Washington, D. C.

1 **EXHIBIT NO. 90. RATE OF RETURN EARNED ON ORIGINAL COST BASE, YEARS 1937 TO 1940, INCLUSIVE, F. P. C. WITNESS DUNN**

## WRITTEN STATEMENT

The attached schedules have been prepared to summarize the plant costs, reserves, and operating expenses for the four year period 1937 to 1940, inclusive, to show the profit earned and the rate of return on the original cost base. There are set forth certain rate adjustments proposed by the examiners which have not been made in the underlying exhibits, but are included here for the purpose of summarizing all costs expected to increase or decrease income in the future.

*Return Earned on Original Cost Base.*

Schedule No. 1 shows the average original cost base in the amount of $31,281,373. This amount includes production, transmission, distribution, and general plant with the related reserves for depreciation and depletion deducted and the allowance for working capital added.

Net Operating Revenues are shown in the amount of $4,125,399 as the annual average for the four-year period. The determination of net operating revenues, as adjusted, is shown by the income statements summarized on Schedule No. 1A. The expenses of the four-year period are expected to serve as a guide for future operating costs; therefore, certain nonrecurring expenses are not included in Schedule No. 1.

2 *Exploration and Development Costs.*

The actual costs and losses as set forth in accounts 510, 511, and 512 have been included as a deduction from net operating revenues for the four-year period. Due to cancellations of unoperated acreage delay rental cost is expected to be reduced in the future. However, the company is starting a program of exploratory deep drilling, and there is a known loss on the first of these deep wells of approximately $200,000.00 due to a well completed dry in 1941. For this reason it is believed proper to include the full amount of exploration and development costs as shown.

*Interest on Unoperated Acreage.*

Interest on unoperated acreage has been included as a deduction from net operating revenues. The investment has been classified as Gas Plant Held for Future Use which is not included in Gas Plant in Service. The examiners propose the allowance in operating expenses of interest as a carrying cost of the investment. A rate of 6% has been used pending the decision by the Commission as to a fair rate of interest.

The minor adjustment on Gas Plant Held for Future Use relates to adjusting entries 338 and 342, Exhibit No. 57A. Certain wells and field lines not used in prior years were placed in service in 1940.

It is proposed to amortize property reclassification and rate case expenditures over a period of ten years, being a period of six years in the future.

3 *Adjustment of Income Taxes.*

The income taxes actually paid were included in the taxes account. This adjustment removes the Federal Income Taxes pending the determination of a fair return by the Commission and the computation of the indicated taxes on income at the latest tax rate.

For Federal Income Tax purposes certain deductions and allowances are made which are not recorded on the books or set forth in the examiners' income statements. To illustrate a method for the Commission to use in estimating an allowance for future income taxes, giving effect to whatever reduction in revenues may be ordered by the Commission, the following tabulation is submitted:

| | 1937 | 1938 | 1939 | 1940 | Average |
|---|---|---|---|---|---|
| Income taxes paid | $282,315 | $17,515 | $191,524 | $912,313 | $350,916 |
| Income tax rate | 14.9386% | 16.5% | 16.5% | 24% | |
| Net taxable income | $1,889,830 | $106,150 | $1,160,733 | $3,801,304 | 1,739,504 |
| Assumed reduction (for illustration only) | | | | | 1,000,000 |
| Revised net taxable income | | | | | 739,504 |
| Tax rate in effect | | | | | .24 |
| Allowance for income tax (illustrative only) | | | | | 177,481 |

Schedule No. 1 shows the annual average return earned in the amount of $3,809,201 and the average rate of return earned on the original cost base as 12.18%.

4 *Return Earned on Original Cost Base, Exclusive of Distribution Plant, using Company Method.*

The company's method of determining return applicable to interstate sales avoids an allocation of costs to West Virginia domestic and industrial consumers. The rates to these consumers are subject to West Virginia regulation, and such sales amount to less than 20% of the total.

Company Exhibit No. 37 sets forth certain reasons why the method of crediting the revenue received from the local distribution of gas in West Virginia in excess of specific distribution costs to the production, transmission and general costs, should be adopted.

The return is worked out on the premise that the Company's local West Virginia business is unavoidable in carrying out its major business of exporting gas from West Virginia; and that these local sales being subject to West Virginia regulation, the remainder of the gross revenues therefrom after deducting specific distribution costs, is the full contribution of the West Virginia consumers towards the costs incurred jointly on account of all gas sold. The cost of the gas exported from the state is thus the Company's total production, transmission and general expenses after crediting this remainder of the revenue from local distribution of gas after deducting specific distribution costs.

Schedule No. 2 sets forth the plant costs, revenues, and operating costs which are taken from the other accounting exhibits. Schedule No. 2A shows the gas service revenues other than interstate sales and the specific costs which have been de-
5 ducted. Return is computed at an assumed 6% on net original cost of distribution plant, including an allowance for working capital.

Schedule No. 1 shows the annual average rate of return earned at 12.18% on the total base as compared with 12.53% on the interstate base, shown by Schedule No. 2. The difference in return earned and the rate is $104,535, representing the return on distribution plant included in Schedule No. 2.

1 **EXHIBIT NO. 92.—COMPARATIVE INCOME STATEMENT FOR THE THREE MONTHS ENDED MARCH 31, 1941, AND 1940. F. P. C. WITNESS DUNN**

## WRITTEN STATEMENT

The attached income statement with data on operating revenues has been prepared from records of Hope Natural Gas Company without adjustment. It is presented for comparative purposes to show the results of operations for the latest period available.

The income data for the first three months of 1941 have been compared with those for the first three months of 1940. It is the opinion of the examiner that this comparison, which is made for the purpose of showing the general upward trend of the company's business, is proper for that purpose because there have been no major changes in the sales contracts and plant accounts. A change affecting operations that has been made in 1941 is the installation by The East Ohio Gas Company of a liquefaction plant at Cleveland. This plant can be filled to capacity during a period of low demand and emptied of its contents as need arises. It is reported that the experiment is successful and hence of benefit both to consumers and companies.

The attached statements include the revenues and expenses arising from the properties of the merged Reserve Gas Company. The operating results and properties of that company, by stipulation of counsel, have been excluded from
2 the present investigation of Hope Natural Gas Company. For comparative purposes it is not deemed necessary to make the detailed study required to segregate the former Reserve Gas Company operating results, for the reason that such expenses and revenues are about the same for each period. This is further brought out in Schedule No. 2 which shows the following facts concerning sales to The Northwestern Ohio Natural Gas Company, the customer supplied by the former Reserve Gas Company:

| | M. c. f. | Amount |
|---|---|---|
| Three months: | | |
| 1941 | 1,361,842 | $691,552.60 |
| 1940 | 1,351,702 | 640,410.60 |

The comparative income statement discloses the continuing upward trend of sales and profits. Operating revenues are up $1,114,562.24 for the three-month period of 1941 over the corresponding period of 1940. Utility operating income is also higher by the amount of $591,777.50 or approximately $200,000.00 per month.

It is not intended that the attached schedules be used for purposes other than to indicate the trend of operations.

1 **EXHIBIT NO. 66.—DETERMINATION OF COMPOSITE SERVICE LIVES OF GASOLINE AND BUTANE PROPERTY OF THE HOPE CONSTRUCTION AND REFINING COMPANY, F. P. C. WITNESS SOYSTER**

[Pages i–iv omitted]

## WRITTEN STATEMENT

### PURPOSE

The purpose of this work is to determine the annual rates of accrual for the depreciation, and the composite service lives, of the properties used by Hope Construction and Refining Company in the manufacture and marketing of gasoline, butane, and other byproducts derived from natural gas.

### SCOPE

The properties under consideration, and for which service lives and annual rates have been determined, are only those in the state of West Virginia, which are carried on the books of the Hope Construction and Refining Company as gasoline investment and butane investment.

The Commission's accounting study of these properties has taken into consideration only the recent history of operations of these properties, namely for 1937, 1938, and 1939 (the last three years for which the records of the Company were complete). In this study of service lives there have likewise been taken into consideration only properties which have been carried on the books of the Company during the same three years. All plants included, with the exception of Littleton, have been used exclusively to process gas of the Hope Natural Gas Company.

2 ### GENERAL STATEMENT

For definitions of the terms used in this study, reference is made to an exhibit introduced in these proceedings by another member of the engineering staff of the Commission, which is entitled "Determination of Composite Service Lives of the Hope Natural Gas Company Property by Primary Accounts.".

The first commercial installation in the United States, of facilities for the extraction of gasoline and other hydrocarbons from natural gas by the oil absorption process was at the Hastings gasoline plant. The Company has only one plant at which butane and other liquefied petroleum gases are made. It is located adjacent to the Hastings gasoline plant, and is practically inseparable from it. These two plants and the five other gasoline plants in the first list given below, were the only plants found to be operating when I made the inspection during the latter half of January 1941.

All West Virginia plants under consideration in this study which were in operation prior to 1920, were built by Hope Natural Gas Company and were operated by that company until transferred in that year to Hope Construction and Refining Company. The respective dates of construction, daily capacity, and operating status are as follows:

| Name of plant | Original construction | Present capacity, gal. day | Status of property as of Dec. 31, 1939 |
|---|---|---|---|
| Hastings gasoline | 1914 | 40,000 | Operating. |
| Hastings butane | 1918 | 20,000 | Do. |
| Waverly gasoline | 1915 | 5,000 | Do. |
| Kennedy gasoline | 1917 | 20,000 | Do. |
| Bristol gasoline | 1918 | 8,000 | Do. |
| Goff gasoline | 1919 | 2,500 | Do. |
| Cornwell gasoline | 1926 | 12,000 | Shut down temporarily.[2] |

[1] Purchased from Reserve Gas Co., Dec. 31, 1938.
[2] Resumed operations October 1940.

Other West Virginia gasoline property on the Company's books as of December 31, 1939, is as follows:

| Name of plant | Original construction | Purchased | Shut down | Status of property as of Dec. 31, 1939 |
|---|---|---|---|---|
| Wright gasoline | 1916 | | 1935 | Boiler plant in use, gaso. plant dismantled. |
| Ellenboro gasoline | 1916 | | 1931 | Partly dismantled. |
| Salem gasoline | 1922 | [1] 1929 | 1939 | Do. |
| Littleton gasoline | 1924 | | 1932 | Retired in 1937. |
| Evans gasoline | 1926 | | 1931 | Dismantled. |
| Other property: | | | | |
| General investment | 1916 | | | In use. |
| Anshutz loading station | | [2] 1926 | | Do. |
| Perrine loading station | | [2] 1926 | | Dismantled. |

[1] Purchased from Godfrey L. Cabot, Inc.
[2] Purchased from Carter Oil Company.

4 All gathering and compressing of gas delivered to the gasoline plants is done by the Hope Natural Gas Co. The Hope Construction and Refining Company's gasoline and butane activities are limited to the extraction and marketing of these products. The gasoline plants, with the one exception of the Waverly plant, are built on sites adjacent to compressor stations of the Hope Natural Gas Co.

At Hastings and Cornwell, steam for gasoline plant use is received from gas-fired boilers of the Hope Natural Gas Co.

Due to the location of the plants involved in these determinations, and the fact that they treat gas from many production sources, it has not been practicable to relate the service life of any of the properties to a particular gas field or known source of supply.

Consequently the service lives and annual rates of accrual for depreciation have been more particularly related to the necessity for these gasoline extraction facilities in relation to the property of the Hope Natural Gas Co.

5 METHOD

At the beginning of these investigations a survey was made in the field covering all the principal extraction plants and other gasoline and butane properties of the Hope Construction and Refining Company, located in the State of West Virginia.

In the process of the survey, notes were made of the apparent age of the properties, the condition of maintenance, comparative working conditions and service requirements. Operating data were noted showing temperatures, pressures, rates of flow, quantity of gas handled, and products extracted. Operating conditions were discussed with those responsible for the operation and maintenance of the property, and information was secured relative to the adequacy of the facilities in use.

Opportunity was afforded, during the process of the survey, to inspect and study the Brave gasoline plant, situated at the site of the Brave Compressor Station of the Peoples Natural Gas Company on the Pennsylvania side of the West Virginia-Pennsylvania State line. This plant, originally constructed in 1915, is owned and operated by the Hope Construction and Refining Company, and is under the same general supervision as the plants in West
6 Virginia. It has a present daily capacity of 20,000 gallons of gasoline. In 1940, sixty percent of the gas treated by this plant came through lines of the Hope Natural Gas Company in the State of West Virginia. Except for the inclusion of a more

recent type of absorption equipment, the Brave plant is similar in character of construction and operation to the other plants of this Company involved in this discussion. The data on this plant serve as valuable support in the determination of service lives of the plants in West Virginia, although not used in the determination. For this reason this investigation was extended to include the Brave gasoline plant.

An analysis was made of the plant and investment of each of the several plants. The items of property were segregated into approximately forty separate groups or retirement units. Each group of property such as absorbers, boilers, rectifiers, tanks, etc., is composed of similar units and is set up with the related book costs. Due consideration was given to the net salvage value. An average service life with corresponding straight-line rate of accrual was determined for each of these groups of property at each plant.

7 In arriving at a composite service life and rate applicable to all plants, a composite life and rate was first determined for each plant and loading station which has been carried on the books of the Company during the past three years. From these the composite service life and rate of accrual was determined for all plants.

The Kennedy plant was considered individually, for the reason that it was owned and operated from 1917 to the end of 1938 by another company.

The average service lives of a number of classes of property in the several plants have been established with reasonable accuracy. For certain other classes of equipment, however, such as absorbers, rectifiers, stills, and fractionators, obsolescence, rather than physical deterioration, is the most important factor in the determination of service life.

Obsolescence in these plants is forcefully indicated by the high rate of steam consumption when compared with gasoline production. At Hastings and Cornwell plants, where the steam used is measured, the consumption is shown to be more than double that of more efficient plants for which data are available.

In order to determine the service lives of facilities which have been in use for some time it is necessary to estimate only the 8 remaining life expectancy. This is the measure of the time from the date of consideration until it is unprofitable to continue the property longer in service. Improvements in the art of gasoline extraction have produced plants of greatly reduced in-

stalled cost as well as operating costs and at the same time much improved extraction efficiencies. Careful consideration of these facts has been applied in these determinations.

CONCLUSION

After taking into consideration all relevant factors, both functional and physical, the composite service life of all of the gasoline and butane properties of the Hope Construction and Refining Company in the State of West Virginia (with the exception of the Kennedy plant), was determined to be 20.9 years. The corresponding annual straight-line rate is 4.79 percent. The composite service life for the Kennedy gasoline plant was determined to be 24.0 years, and its corresponding annual straight-line rate, 4.16 percent.

On the following page of this exhibit is shown a tabulation of data for individual plants. These data are the basis for the composite figures above quoted.

SUMMARY BY PLANTS

Tabulation of Composite Service Lives and Rates of Depreciation Accrual Determined for Gasoline and Butane Property in the State of West Virginia of the Hope Construction and Refining Company:

| Property | Adjusted book cost as of Dec. 31, 1939 | Composite service life (years) | Annual straight-line rate (%) |
|---|---|---|---|
| Hastings gasoline | $990,808.99 | 23 | 4.35 |
| Butane investment | 261,663.62 | 25 | 3.98 |
| Waverly gasoline | 171,297.29 | 23 | 4.39 |
| Cornwell gasoline | 185,026.10 | 27 | 3.63 |
| Bristol gasoline | 163,581.60 | 23 | 4.33 |
| Golf gasoline | 106,030.86 | 21 | 4.82 |
| Wright gasoline | 112,720.53 | 21 | 4.73 |
| Littleton gasoline | 196,342.58 | 11 | 8.80 |
| Salem gasoline | 22,706.50 | 16 | 6.48 |
| Evans gasoline | 16,384.99 | 10 | 9.72 |
| Ellenboro gasoline | 10,003.92 | 18 | 5.56 |
| Anshutz loading station | 23,142.39 | 24 | 4.19 |
| Perrine loading station | 44,973.63 | 23 | 4.41 |
| General investment | 20,105.00 | 21 | 4.79 |
| Total | 2,024,837.00 | 20.9 | 4.75 |
| Kennedy gasoline | 170,726.82 | 24 | 4.16 |
| Total West Virginia gasoline and butane | 2,195,563.82 | | |

[1] When retired in 1937.

1 **EXHIBIT NO. 63.—REVENUE, EXPENSES, AND NET INVESTMENT OF HOPE CONSTRUCTION AND REFINING COMPANY PERTAINING TO GASOLINE EXTRACTION CONTRACT WITH HOPE NATURAL GAS COMPANY, THREE YEARS ENDED DECEMBER 31, 1939, F. P. C. WITNESS BLEASE**

## WRITTEN STATEMENT

The Federal Power Commission, under date of October 14, 1938, issued an order of investigation into and concerning all rates, charges, classifications, rules, regulations, practices or contracts of Hope Natural Gas Company. In accordance therewith, an examination of the accounts and records of Hope Construction and Refining Company has been made, and, as a result, this report on the earnings and investment of the gasoline department is submitted.

*Purpose of this Exhibit.*

By contract dated June 30, 1920 (retroactive to January 1, 1920) Hope Construction and Refining Company agreed to process the natural gas of Hope Natural Gas Company passing through the pipe lines at the gasoline plants, and to extract therefrom gasoline and other products on a royalty basis. This contract specified that Hope Natural Gas Company was to receive one-fourth (1/4) of the gasoline and other products extracted, but was to bear one-fourth (1/4) of transportation costs to market.

Other provisions in this contract specified that all natural gas passing through the pipe lines at the gasoline plants was to be processed and returned without diminution in pressure, volume,
2 and heating value, and that Hope Natural Gas Company was to furnish free water, steam, and electrical current, except at plants already equipped with their own supply.

A supplementary contract dated August 1, 1923, revised the royalty to be received by Hope Natural Gas Company to one-eighth (1/8) of the gasoline and other products extracted, but with other provisions to remain the same.

This one-eighth royalty has continued to date and is being currently booked.

Hope Natural Gas Company Exhibit No. 37, Rate Statement, by George I. Rhodes, page 7, states "Such a low royalty is not appropriate in the eastern territory where prices received for gasoline and for field sales of gas are higher than in the midwest and accordingly in this exhibit the gasoline and butane royalties have been increased to the original fraction of 1/4 of the gross. This is a fair royalty."

Hope Natural Gas Company and Hope Construction and Refining Company are admittedly affiliated companies.

There are presented herein details of Hope Construction and Refining Company's investment in plant, for gasoline and other product extraction, devoted to processing Hope Natural Gas Company gas, and the earnings from these plants, in order to give the Commission factual data for determination of the proper credit to Hope Natural Gas Company for gasoline and other products extracted from its gas.

3 *Scope of this Exhibit.*

Hope Construction and Refining Company owns and operates oil and gas wells, lines, and appurtenant facilities in addition to its gasoline extraction plants. Also in addition to the gasoline and butane extraction plants in West Virginia devoted exclusively to processing gas of Hope Natural Gas Company. Hope Construction and Refining Company owns and operates gasoline plants in Pennsylvania and Ohio. These plants are known as the Brave, Imperial, and Jennings Guffey in Pennsylvania, and the Ludlow in Ohio. Of these, only the Brave plant in Pennsylvania processes gas originating from Hope Natural Gas Company's wells in West Virginia.

This exhibit has been confined principally to Hope Construction and Refining Company's investment in and earnings from its West Virginia gasoline and butane operations.

*A—Revenues and Expenses—All Departments.*

In addition to the gasoline extraction contract mentioned above, there exists a contract known as the "Service Agreement" between Hope Natural Gas Company and Hope Construction and Refining Company. The agreement was dated June 30, 1937 (renewed March 1, 1940). In this agreement Hope Natural Gas Company proposes to furnish at cost: (1) General administrative services, (2) general supervisory services, (3) general accounting services, (4) general engineering, (5) telephone and telegraph service, (6) annuities and benefits department services, (7) deple-

tion department services, (8) depreciation department services, (9) medical and health services, and (10) stationery department services. The bases for allocation of these services appear reasonable and the Examiners have taken no exception to either the amounts or methods of allocation.

Schedule No. A-1, "Earnings Statement, per Books," years 1937, 1938, and 1939, presents a condensed earnings statement of all departments of Hope Construction and Refining Company; oil, gasoline, butane, and gas. This statement was taken from the books of the company and has not been adjusted. The revenues, operating expenses, depreciation and depletion, taxes, and net operating revenues for each department are shown. It is of interest to note that the oil department shows a loss for the years 1938 and 1939, and that the gas department shows a loss for 1937, 1938, and 1939, while the gasoline and butane departments provide a profit for each year shown.

*Gasoline Department Earnings—All States.*

Schedule No. A-2, "Gasoline Department Earnings Statement, per Books," presents a condensed earnings statement of the gasoline department, and includes operations of all plants. This statement was taken from the books of the company and has not been adjusted. It shows for the years 1937, 1938, and 1939 the gasoline sales by gallons and dollars, a condensed summary of the gasoline expenses, and the net earnings of the gasoline department, which is in agreement with the gasoline department net earnings shown on Schedule No. A-1.

Schedule No. A-2a, "Revenue from Gasoline Sales by Plants," years 1937, 1938, and 1939, supports and is in agreement with the "Sales" shown on Schedule No. A-2. Schedule No. A-2a shows the gasoline sales for the three years, divided between states and plants, showing also the revenue received from purchased gasoline. This statement was taken from the books and records of the company and is unadjusted.

Schedule No. A-2b, "Gasoline Department Expenses," years 1937, 1938, and 1939, supports and is in agreement with the "Total Expenses" shown on schedule No. A-2. This statement was prepared from the books and records of the company in such detail as the accounts were kept. It will be noted that the primary purpose is to determine the cost of gasoline manufactured and the cost of gasoline sold, while there has been no segregation between operating and maintenance expenses.

*Earnings Statement—Adjusting Entries.*

Adjusting entries have been made for the West Virginia gasoline department earnings and for the butane department earnings.

Entry No. 1 reverses the royalty paid to Hope Natural Gas Company for the years 1937, 1938, and 1939, and to Reserve Gas Company for 1939. This royalty has been computed at 1/8 of the net sales and charged to gasoline and butane expense under account "Contract Gas." This reversal has been made in order to arrive at an earnings base on which a royalty or other credit may be computed.

6 Entry No. 2 reverses the charge for vent gas returned to Hope Natural Gas Company for the years 1937, 1938, and 1939. According to the Commission engineers, this vent gas is the property of Hope Natural Gas Company and no charge should have been made therefor by Hope Construction and Refining Company. Hope Construction and Refining Company records this charge in a compound journal entry. The company assumes that the vent gas returned is equal in value to the boiler gas and steam furnished by Hope Natural Gas Company to the gasoline plants, excepting the Goff plant, where the vent gases are metered. The entries recorded each month charge "Fuel and Power" with the boiler gas and steam consumed, and credit "Vapor Fuel Earnings" which is netted against "Contract Gas" on the earnings statements. The difference between the charge and credit, due to the Goff plant (See Fuel and Power Schedule No. A-3b), is credited to Hope Natural Gas Company. Hope Natural Gas Company records this net difference as a credit to "Miscellaneous Earnings."

If a complete reversal of the compound entry were made, namely, to reverse also the fuel charge, the gasoline earnings would be overstated, inasmuch as the cost of gasoline boiler fuel would be borne by Hope Natural Gas Company's gas compressor stations.

7 Entry No. 3 substitutes depreciation expense computed on rates furnished by the Commission engineers for the depreciation expense recorded on the books of account. It has been the company's policy to record depreciation expense on a straight line basis. The rates used on gasoline property have been 3% since 1934 (5% from 1920 to 1934) and 5% on butane property. The rate used in this study, as furnished by the Com-

mission engineers is 4.79% for both classes of property (See Schedules Nos. B–3 and B–5).

In addition, it has been the company's policy to charge or credit expenses under the accounts "Plant and Equipment Retirement" or "Profit or Loss from Sale of Capital Assets" with a calculated profit or loss resulting from the retirement of a capital asset. This profit or loss is computed by charging these accounts with the cost of the equipment retired or sold, and crediting the accounts with the salvage thereon and with the depreciation applicable thereto. The depreciation applicable thereto is the ratio which the total accumulated reserve bears at the beginning of the year, to the total investment by departments.

All of these entries have been set up by accounts and by years and have been posted to the appropriate adjustment columns on the West Virginia gasoline department, and the butane department earnings and expense schedules, Nos. A–3 and A–4.

*West Virginia Gasoline Department Earnings Statement—Schedule No. A–3 and Butane Department Earnings—Schedule No. A–4.*

In addition to being departmentalized, the revenue and expenses of Hope Construction and Refining Company are segregated between states. These segregations are accomplished by assigning directly to the proper department and state expenses as are readily identified as being applicable thereto, such as direct labor, materials, fuels, transportation expenses, rentals, etc.

Some expenses not readily assignable are allocated on the basis of gross investment; these are general office salaries and expenses, legal expenses, benefit plan expense, thrift plan expense and other miscellaneous expenses. Taxes are allocated on various bases; income tax on net earnings, franchise, capital stock, property taxes on gross investment, social security taxes on payrolls, etc. Depreciation, during the years included in this exhibit, is assigned directly to the depreciable property on which calculated. Gasoline depreciation is calculated at 3% of depreciable property and butane depreciation at 5%. Of the total thus calculated, 95% is deemed applicable to manufacturing facilities and 5% to shipping, handling, and storage facilities.

The amounts and bases of such allocations appear reasonable and the Examiners have made no adjustments by reason of these allocations.

Butane is extracted at only one plant, Hastings, located in West Virginia. All revenues from butane are allocated to the West Virginia district, but some of the expenses are allocated on the company's books to other states. An examination of these expenses indicates that they are primarily concerned with marketing butane produced at the Hastings plant, and as such, should be considered applicable to the revenue from that plant. In this exhibit the total net revenue from butane, including all expenses, has been presented rather than that of West Virginia only.

9 The revenues and expenses shown on the West Virginia gasoline department earnings statement for the year 1939 include revenues and expenses applicable to the Kennedy plant, operated in West Virginia and processing gas of Reserve Gas Company. This plant was purchased by Hope Construction and Refining Company from Reserve Gas Company on December 31, 1938. Though Reserve operated under its corporate identity during the year 1939, its common stock was owned by Hope Natural Gas Company. Reserve was merged with Hope Natural Gas Company on December 30, 1939, thus the fields from which Reserve drew its gas in 1939, will, in the future, be a part of the holdings of Hope Natural Gas Company.

Schedule No. A-3, "West Virginia Gasoline Department Earnings Statement," years 1937, 1938, and 1939, presents the sales, expenses, and net earnings for the years indicated. The schedule is further grouped to show these items as reflected on the books of the company, the Examiners' adjustments thereto, and the accounts as adjusted. The net effect of the Examiners' adjusting entries on the West Virginia gasoline earnings is a decrease, as follows:

| Particulars | 1937 | 1938 | 1939 |
|---|---|---|---|
| Net earnings, per books | $273,899.40 | $198,823.51 | *$210,157.38 |
| Examiners' adjustments | *65,875.03 | 66,144.06 | 78,137.45 |
| Adjusted earnings | 208,024.37 | 72,679.45 | 132,019.93 |

* Italic figures denote decrease.

Schedule No. A-3a supports and is in agreement with "Total Expenses" shown on Schedule No. A-3. This schedule presents the operating expenses in detail and, similar to Schedule

10 No. A-3, is divided to show expenses per books, adjustments thereto and the expenses as adjusted for the years indicated.

Schedule No. A-3b supports and is in agreement with the

"Fuel and Power" account shown on Schedule No. A–3a. This schedule is divided to show by years the amount and type of charge entering the fuel account of each plant. The column headed "Excess of Boiler Fuel over Vapor Fuel Returned" represents the net credit to Hope Natural Gas Company for the difference between boiler fuel furnished and the vapor fuel returned. This has been discussed above in Examiners' Adjusting Entry No. 2.

Schedule No. A–4, "Butane Department Earnings Statement," years 1937, 1938, and 1939, is similar in form and content to Schedule No. A–3. However, the net effect of the Examiners' adjustments of the Butane department earnings is an increase, as follows:

| Particulars | 1937 | 1938 | 1939 |
|---|---|---|---|
| Net earnings, per books | $181,786.70 | $110,546.45 | $165,720.09 |
| Examiners' adjustments | 23,862.82 | 17,488.10 | 26,443.65 |
| Adjusted earnings | 205,649.52 | 128,034.55 | 192,163.74 |

Schedule No. A–4a, "Butane Department Earnings," years 1937, 1938, and 1939, supports and is in agreement with "Total Expenses" shown on Schedule No. A–4. This schedule is similar in form and content to Schedule No. A–3a.

11. The earnings of Hope Construction and Refining Company applicable to the extraction of by-products from gas of Hope Natural Gas Company, as outlined above, are as follows:

HOPE CONSTRUCTION AND REFINING COMPANY

*Summary of West Virginia Gasoline and Butane Earnings*
*Years 1937; 1938, 1939*

| Particulars | 1937 | 1938 | 1939 |
|---|---|---|---|
| Net earnings, per books: | | | |
| West Virginia gasoline department | $273,899.40 | $168,823.51 | $210,157.38 |
| Butane department | 181,786.70 | 110,546.45 | 165,720.09 |
| Total | 455,686.10 | 279,369.96 | 375,877.47 |
| Examiners' adjustments: | | | |
| West Virginia gasoline department | *65,875.03* | *96,144.06* | *78,237.58* |
| Butane Department | 23,862.82 | 17,488.10 | 26,443.65 |
| Total | *42,012.21* | *78,655.96* | *51,793.93* |
| Net earnings, as adjusted: | | | |
| West Virginia gasoline department | 208,024.37 | 72,679.45 | 132,079.92 |
| Butane department | 205,649.52 | 128,034.55 | 192,163.74 |
| Total | 413,673.89 | 200,714.00 | 324,183.66 |

*B.—Investment and Depreciation Reserve.*

The books of account reflect investment in gasoline and butane plants by plants, but the reserve for depreciation is kept only by departments. In order to ascertain the investment and related reserve for depreciation the balances in plants were listed and this exhibit deals with all West Virginia plants, active or inactive, that have appeared in the gasoline investment ledger within the
12 past five years (1935 to 1939, inclusive). These are termed herein as "currently active West Virginia plants."

Hope Natural Gas Company sold all of its gasoline and butane investment to Hope Construction and Refining Company as of June 30, 1920 at net book cost. Several of the plants dealt with in this exhibit were constructed prior to 1920 and from the period of construction to June 30, 1920, were the property of Hope Natural Gas Company. These are the Bristol, Ellenboro, Goff, Hastings, Waverly, and Wright plants and certain investments termed as General.

This study traces each plant to its origin and no adjustments are made by reason of title transfer.

All credits appearing in the plant accounts were analyzed and the retirements of plant and salvage applicable thereto are summarized on Schedules Nos. B–1b, sheet 1, and B–1b, sheet 2, respectively. These sheets show the retirements and salvage, by years and by plants, of the currently active gasoline plants. Schedule No. B–1a shows the investment as of December 31, by plants and by years, 1914 to 1939, inclusive, in the currently active West Virginia plants.

*Currently Active West Virginia Plants.*

Schedules Nos. B–1b (1) and B–1a have been posted to a summary Schedule No. B–1, "Investment in Currently Active
13 West Virginia Plants, Excluding Kennedy Plant" in the appropriate column under caption "Investment per Books." In Schedule No. B–1 is a column for Examiners' adjustments and the adjusted investment in currently active West Virginia plants is extended to the right in four columns.

The adjustments appearing in Schedule No. B–1 are five in number, and are listed and described by individual entries shown on Schedule No. B–2, "Gasoline Investment—Adjusting Entries."

The adjusted gasoline investment shown on Schedule No. B–1 is posted to the first four columns on Schedule No. B–3 "Investment in Currently Active West Virginia Plants—Excluding Ken-

nedy Plant, and Related Reserve for Depreciation." The cost of the sites on which the plants were built was carried on the books of account as gasoline investment to 1937, but in 1938 was transferred to balance sheet account No. 302–3, "Other Lands, Leases, and Easements."

This cost, as carried on the gasoline investment ledger is shown on Schedule No. B–3 for the purpose of arriving at the depreciable plant balance. It has been assumed in this study that all gasoline investment, except the sites, is depreciable, and that the additions and retirements were incurred as of June 30 of each year. Thus the average balance less the cost of sites is listed under column headed "Average Depreciable Balance" on Schedule No. B–3.

14 To this balance is applied the depreciation rate supplied by the Commission engineer to arrive at the annual depreciation shown on Schedule No. B–3 under "Computed Reserve for Depreciation—Provision" column. Also under this "Computed Reserve for Depreciation" are columns for "Net Salvage" to which are posted the figures from Schedule No. B–1b, sheet 2, previously discussed, and for "Retirements" which are taken from similar column on Schedule No. B–1. The result is that the provision, plus salvage; less retirements, equals the balance of the reserve for depreciation applicable to the currently active West Virginia plants.

*Investment in Kennedy Gasoline Plant and Related Reserve for Depreciation—Schedule No. B–4.*

The Kennedy plant was acquired by Hope Construction and Refining Company as of December 31, 1938, from Reserve Gas Company. The investment on the books of Reserve Gas Company on that date was as follows:

| | |
|---|---|
| Book cost | $256,722.79 |
| Reserve for depreciation | 182,322.43 |
| Book value | 74,400.16 |

Hope Construction and Refining Company recorded the purchase on the books of account as follows:

| | | |
|---|---|---|
| Dr. Gasoline investment | $170,000.00 | |
| Property purchased account (Reserve Gas Company) | 170,000.00 | |
| Cr. Reserve Gas Company | | $170,000.00 |
| Property purchased account | | 170,000.00 |

15 For the purpose of this study the investment is deemed to be that carried on the books of Reserve Gas Company, and the related reserve for depreciation is computed with rates furnished by the Commission engineer on book balances from the date of construction to December 31, 1939, in the form and manner described for the other West Virginia plants.

Inasmuch as the revenues from this plant appear on the earnings statement for only the year 1939, the investment, reserve for depreciation and annual provision are also included in the summaries in this exhibit for only the year 1939.

*Butane Investment and Related Reserve for Depreciation—Schedule No. B–5.*

Schedule No. B–5 presents the butane investment and its related reserve for depreciation. Both the investment and its reserve have been prepared and computed in the same manner as that previously discussed for currently active West Virginia plants.

Schedule No. B–6 and Schedule No. B–6a are summaries. No. B–6 summarizes the investment and retirement reserve for the currently active West Virginia plants, the Kennedy plant, and the butane property as of December 31, 1937, 1938, and 1939, as shown on Schedules Nos. B–3, B–4, and B–5, respectively. Schedule No. B–6a is a condensed summary of the average investment, reserve, and net investment for each of those years.

16 The average net investment as shown on Schedule No. B–6a for each year is as follows:

| *Year* | *Amount* |
|---|---|
| 1937 | $681,131.57 |
| 1938 | 591,177.88 |
| 1939 | 563,227.65 |

*C—Working Capital.*

The working capital requirements of Hope Construction and Refining Company necessary for the conduct of its West Virginia gasoline and butane operations is estimated to be $80,000.00. This is the total of the inventory of gasoline and butane products, merchandise and forty-five days of adjusted operating expenses after deduction of taxes and depreciation, as follows:

| Particulars | 1937 | 1938 | 1939 | Average |
|---|---|---|---|---|
| Adjusted gasoline expenses | $480,329.66 | $411,972.84 | $479,039.13 | $457,113.88 |
| Adjusted butane expenses | 85,826.39 | 65,348.53 | 89,484.04 | 80,219.65 |
| Total | 566,156.05 | 477,321.37 | 568,523.17 | 537,333.53 |
| Less taxes and depreciation | 124,953.21 | 96,342.61 | 154,187.93 | 125,161.25 |
| Net | 441,202.84 | 380,978.76 | 414,335.24 | 412,172.28 |
| 45/360 of above | | | | |
| Gasoline and butane products | 55,150.36 | 47,622.35 | 51,791.90 | 51,521.54 |
| Butane merchandise | 17,936.27 | 30,313.28 | 17,715.00 | 22,000.18 |
| Automotive equipment | 3,124.12 | 3,340.21 | 4,364.45 | 3,609.59 |
| | | | | 2,120.80 |
| Total | | | | 79,252.11 |
| Say | | | | 80,000.00 |

Depreciation has been eliminated because it does not require a cash outlay. Taxes, with minor exceptions, are not payable until the year following that to which applicable.

17 No allowance has been made for prepayments since this item is relatively small and is more than offset by accounts payable. No allowance has been made for bank balances, inasmuch as the collection of taxes in advance of payment tends to build cash funds and also because the forty-five day lag in expenses is greater than is normally incurred in collection of revenue. The average balance, years 1937, 1938, 1939, in the gasoline and butane accounts receivable for the month of December represents only 19.63 days of the average sales for those years.

*D—Appendix—Balance Sheet and Balance Sheet Details.*

There is included in this exhibit Hope Construction and Refining Company's comparative balance sheets for the years 1937, 1938, and 1939 as Schedule No. D-1. The individual items on the balance sheet are analyzed in supporting schedules numbered D-1a to D-1g, inclusive. The amounts appearing on all of these schedules were taken from the books and records of the company and have not been adjusted.

*Conclusion.*

The results of the foregoing statements are summarized as follows:

| Particulars | 1937 | 1938 | 1939 |
|---|---|---|---|
| Average net investment | $681,131.57 | $591,177.88 | $563,227.67 |
| Working capital | 80,000.00 | 80,000.00 | 80,000.00 |
| Total | 761,131.57 | 671,177.88 | 643,227.67 |
| Earnings at 6% on above investment | 45,667.89 | 40,270.67 | 38,593.66 |
| Net earnings, as adjusted | 413,673.89 | 200,714.00 | 424,183.66 |
| Excess of adjusted earnings over 6% of average investment | 368,006.00 | 160,443.33 | 385,590.00 |

18 It is recommended that the accompanying entries (pages 19 to 21) be reflected in the Commission's rate study, in order that Hope Natural Gas Company may receive the proper credit for the products extracted from its gas. The credit to Hope Natural Gas Company is the excess of earnings after allowing Hope Construction and Refining Company all costs incurred in connection with the extraction of gasoline and other products plus a reasonable profit. It is recommended that the Commission determine the reasonable rate of return to be applied to the net original cost of Hope Construction and Refining Company property devoted to this phase of its operations. Pending a determination by the Commission, return has been computed herein at 6%.

4 **EXHIBIT NO. 82.—RATE OF RETURN, VOLUME I, F. P. C. WITNESS KNAPP**[1]

## WRITTEN STATEMENT

*Introduction.*

I have been instructed to prepare an exhibit setting forth the more important facts relative to general economic and financial conditions which should be considered in arriving at a fair and reasonable rate of return for Hope Natural Gas Company.

*Definition of "Rate of Return."*

The "return" received by a public utility consists of the amount of revenue remaining after deduction of necessary and reasonable operating expenses, rents, taxes, and depreciation and amortization accruals, but before provision for interest, dividends, or additions to corporate surplus. This "return" is ordinarily conceived of as the product of a "rate base" times a given "rate of return." Conversely, the "rate of return" may be defined as that percentage rate which, when applied to the rate base, will yield the total, over-all return for the particular utility.

*Statement of Principles.*

It is generally conceded that the basic principles to be considered in determining the reasonableness of a particular rate of return were stated by the Supreme Court in the general rule laid down in the Bluefield decision as follows:

"What annual rate will constitute just compensation depends upon many circumstances and must be determined by the exercise of a fair and enlightened judgment, having regard to all
5 relevant facts. A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no right to profits such as are realized or

[1] Pages 1 to 3 and Appendix pages 1 to 51 omitted.

anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A rate of return may be reasonable at one time and become too high or too low by changes affecting opportunities for investment, the money market and business conditions generally.

Another fundamental principle was stated by the Supreme Court in United Railways *v.* West in the following words: "What will constitute a fair return in a given case is not capable of exact mathematical demonstration."

Although other factors doubtless have been considered by various courts and commissions, the underlying principles to be considered in connection with the problem of rate of return are probably nearly all covered in the above citations from holdings of the Supreme Court.

*Method of Presentation of Data.*

Based on consideration of the underlying principles set forth above, I have made certain studies and have prepared this written statement, which constitutes Volume I of this exhibit, and have prepared or directed and supervised the preparation of certain charts and schedules which have been assembled in two bound volumes constituting Volumes II and III of this exhibit.

Volume II of this exhibit contains data on general interest rates and yields, utility interest rates and yields, and recent financing, general economic conditions, comparative stability of earnings of public utilities and other forms of enterprise, local conditions in the general area of ultimate consumption of natural gas supplied through the facilities of the company involved in the present proceedings, and data reflecting the present situation with respect to idle investment funds and the factors contributing thereto. Volume III of this exhibit contains general statistics pertaining to the natural gas industry and, in addition, presents facts concerning the ownership, issuance, prices and yields of securities of natural gas companies.

As above indicated, the data in Volumes II and III of this exhibit are presented through the medium of charts and schedules. In order to facilitate the reading of the charts, the charts

are accompanied by schedules which contain the data on which the charts are based. For example, where a schedule number appears on the same line as a chart number in the Table of Contents, the schedule and chart should be read in conjunction with one another. In certain instances a schedule number appears without a related chart number, in which case the schedule should be read alone.

7 STATEMENT ON VOLUME II OF EXHIBIT

From the Table of Contents of Volume II of this exhibit, it will be seen that the charts and schedules contained therein are arranged in several groups or sections. These sections, in the order of their appearance, are as follows:

1. General Interest Rates and Yields; which relates to yields on investments in bonds of domestic corporations and Treasury bonds, and interest rates on 4–6 months commercial paper and 60–90 day time loans.

2. Utility Interest Rates and Yields and Recent Financing; pertaining to interest rates and yields on utility securities and containing information on recent financing by public utilities in general and, in addition, data compiled separately covering new financing by electric utilities during the period from 1935 through February 1941.

3. Economic Conditions; which gives a general picture of economic conditions both currently and for the period since 1920 as indicated by indexes of wholesale commodity prices, general business activity and, for the period since 1929, data on national income.

4. Comparative Risk; this section giving an indication of the relative risks of public utilities as compared with other forms of enterprise.

5. Local Conditions; containing data on rediscount rates of the various Federal Reserve Banks, and averages of rates charged customers by banks in principal cities of the country. This section also contains data comparing economic conditions throughout the Nation in recent years with those in the States of Ohio, Pennsylvania, and West Virginia, and contiguous territory.

6. Idle Money Factors; which relates to the present situation respecting the volume of idle investment funds and the factors contributing to the growth of such funds in recent years.

*General Interest Rates and Yields.*

Moody's Investors Service publishes a considerable amount of financial data and its publications are accepted and relied upon generally for purposes such as are now being considered.

8 Chart 1 shows Moody's composite bond yield average based on 120 domestic corporation bonds which carry the four highest bond ratings assigned by Moody's publication. The chart also shows the average yield for the 30 bonds included in each of the four rating groups, namely: Aaa, Aa, A, and Baa. There are not always 120 bonds in Moody's compliation for reasons which will be explained below.

*Chart 1.*—Chart 1 reflects the range of bond yield averages since 1920. The composite average yield for all bonds included in the data had reached by the end of the 1936 the lowest level recorded since 1920, namely, 3.67%. After rising during 1937 and the early part of 1938 to 4.50% in April 1938, a decline took place which by August 1939 had carried the composite average down to the 1936 low point. The month of September 1939 witnessed a sharp rise resulting from the outbreak of war in Europe. The composite average moved from 3.67% to 3.95% in that month. Between September 1939 and the year-end, the average declined to the August level. Except for the rise which occurred in May 1940 following the invasion of the Low Countries, the year 1940 witnessed a continuous decline in the composite average, the yield reaching a record low point of 3.36% at the year-end. In February 1941 the yield rose slightly to 3.40% and stood at 3.39% in March and was 3.40% on April 18, 1941, the latter two figures not being shown on the chart.

Since Chart 1 shows the individual rating group averages from which the composite average is derived, it can be seen that by December 1940 the average yields for bonds of Aaa, Aa, and A rating, after advancing about 0.10% in May and June, had also declined to record low levels, these being considerably

9 lower than the levels established in 1936. For example the low points in 1936 as compared with the yields shown for December 1940, are as follows: Aaa bonds, 1936, 3.10%, December 1940, 2.71%; Aa bonds, 1936, 3.28%, December 1940, 2.82%; A bonds, 1936, 3.78%, December 1940, 3.36%. The first two months of 1941 witnessed moderate rises in yields on Aaa and Aa bonds, continuing into March and April, the yield on April 18, 1941 being 2.83% on Aaa bonds and 3.03% on Aa bonds, with little change occurring in yield on A bonds.

The risk factor associated with bonds of Baa rating is reflected by the more pronounced rise in the average yield on such bonds commencing in the latter part of 1937 and culminating in the early part of 1938 than was the case with respect to bonds of higher rating. The 1936 low point for Baa bonds was 4.52%, the yield subsequently rising to 5.16% in September 1937 and to 6.47% in April 1938. The yield declined rapidly during the remainder of 1938 to 5.27% in December 1938. During 1939 the average yield on Baa bonds declined still further but in December 1939, at 4.92%, was still 0.40% above the 1936 low point, in contrast with the experience of bonds of higher grade. The average yield on Baa bonds continued to decline during the first four months of 1940, but in May increased sharply by 0.20% and in June advanced 0.17%, resulting in a rise of 0.37% over the April average. This rise compares with that of about 0.10% in the average yield for the higher grade bonds in the same two-months period. From June to December 1940 the Baa average yield reflected a much more substantial decline than was recorded for higher grade bonds with the result that the December average of 4.45% was 0.07% below the 1936 low point, a decline of 0.47% from the average for December 1939. In January 1941 the Baa average declined still further to 4.38% and, following a slight increase in February, stood at 4.31% on April 4 and 4.35% on April 18, 1941. The latter figure is 0.10% lower than that for December 1940 in contrast with the moderate increase in 1941 above noted with respect to yields on Aaa and Aa bonds.

Inspection of Chart 1 will reveal the virtual collapse of the bond market which occurred in 1931 and the continuation of an extreme degree of weakness thereafter for the greater part of three years. In this period bonds most severely affected were those regarded as subject to greater investor risk. It will be observed, for example, that while the yields for Baa and A bonds reached 11.63% and 8.5%, respectively, in this period, the highest yield recorded for Aa bonds was 6.60% and for Aaa bonds was only 5.41%.

The data upon which Chart 1 is based appear in Schedule 1 which will be found immediately following the chart. Page 1 of Schedule 1 contains the composite monthly and annual average yields for each year commencing with the year 1920 on 120 domestic corporation bonds, including bonds of the four highest Moody bond rating groups, namely: Aaa, Aa, A, and Baa. Simi-

larly, Page 2 contains the average yield on bonds of Aaa rating, Page 3 on bonds of Aa rating, Page 4 on bonds of A rating and Page 5 on bonds of Baa rating. Each rating group includes, so far as they are available for inclusion, 30 domestic corporation bonds. A footnote on Page 5 indicates the source from which the data were taken. The lines on the chart can be readily associated with the data contained in the schedule. For example, Page 3 of Schedule 1 shows that the yield on
11 30 domestic corporation bonds of Aa rating was 3.00% in February 1941, as reflected on Chart 1.

Page 6 of Schedule 1 describes the methematical basis of the yield computations. Monthly yield averages are unweighted arithmetic averages of daily yields computed on the basis of closing prices and calculated to maturity dates. For each rating group the average is based on the bonds included in that group and the composite average is the average of the four rating group averages. Commencing on Page 6 and continuing on Page 7 of Schedule 1 will be found the key to Moody's bond ratings. For example, bonds of Aaa rating are those judged as representing bonds of the best quality, generally referred to as "gilt edge" because they carry the smallest degree of investment risk. Such bonds are characterized by security of principal, and interest payments thereon are protected by large or exceptionally stable margins, changes in which are most unlikely to impair the fundamentally strong position of such issues. Bonds of Aa rating rank high but lack one characteristic or another of the highest type of bond investment. Together with the Aaa group they comprise what are generally known as high-grade bonds. Bonds carrying the A rating possess many favorable investment attributes and are to be considered as higher medium grade obligations. Baa bonds are those considered as lower medium grade obligations, i. e., they are neither highly protected nor poorly secured; such bonds, besides lacking outstanding investment characteristics, in fact exhibit speculative characteristics as well.

Pages 8 to 11, inclusive, of Schedule 1 contain lists of the bonds currently used in Moody's bond yield averages ac-
12 cording to rating groups. Aaa bonds, grouped according to classification as Industrials, Railroads, and Public Utilities, are listed on Page 8. Aa bonds are similarly listed on Page 9. A bonds on Page 10 and Baa bonds on Page 11. It will be noted that the lists of Industrial Aaa, Aa and A bonds contain fewer than ten bonds, there being only four bonds in the Aaa group, three in the Aa group, and nine in the A group. Similarly, there

are only five Railroad bonds in the Aaa group and eight in the Aa group. Moody's explanation, as given on Page 6 of Schedule 1, is that it has not been possible since 1933 to find a sufficient number of representative bonds for these rating groups. However, as previously indicated, the averages for these groups are given equal weighting in combining them with other group averages.

*Chart 2.*—The purpose of the next two charts is to show that the trend of bond yields is not an isolated phenomenon but is part of the movement of interest rates in general, as indicated by the broadly similar patterns observed in the trend of interest rates on 4-6 months commercial paper and on 60-90 day time loans, as well as in the yields on U. S. Treasury bonds. In other words, the purpose of these two charts is merely to furnish added data regarding the movement of interest rates as such, and not to offer short-term money rates or yields on Treasury Bonds as a measure of a proper rate of return.

Chart 2 shows interest rates on 4-6 months commercial paper and 60-90 day time loans and is based on averages computed by Standard Statistics Company from data appearing in the Commercial and Financial Chronicle. The 4-6 months paper is issued by such seasonal borrowers as Armour's and Swift's and is sold to banks through dealers. The 60-90 day time loans
13 represent bank loans to New York Stock Exchange brokers and are secured by mixed collateral. Although the 4-6 months paper, contrary to expectation, currently carries a lower rate than the shorter-term time loans, there are two factors which may be assumed to effect a higher rate for 60-90 day loans than for 4-6 months paper. These are, first, that the rate for 60-90 day loans is assumed to be more or less fixed by agreement between banks and, second, that a service charge element is presumed to exist by reason of the allowance of substitutions of collateral in connection with brokers' loans.

Current interest rates on both types of loans are extremely low as compared with the levels existing during the period 1920 to 1929. For example, by reference to Schedule 2 it may be seen that the rate on 60-90 day time loans varied from 8.72% in 1920 to as low as 2.52% in 1924 and rose to 8.94% in 1929. The average for that ten-year period was 5.46%, as compared with 1.43% for the eleven years following 1929. The rate on 60-90 day time loans now stands at 1.25%, but for a brief period was 0.50% in 1932 and 0.25% in 1935.

On 4–6 months commercial paper, the average rate for the ten-year period 1920–1929 was 5.01%, while since 1929 the rate has averaged 1.54%. The rate on this type of paper remained unchanged at 0.75% from November 1938 through January 1940, but in March 1940 declined to 0.63%. Since the latter date the rate has remained unchanged.

*Chart 3.*—Chart 3 shows the yield on U. S. Treasury Bonds due or callable after twelve years, as computed by the U. S. Treasury Department for the period since 1920. This chart portrays
14 a somewhat similar situation as that shown on Charts 1 and 2, the trend being generally downward in recent years. The low point for the period 1920–1937 was reached in February 1937 with a yield of 2.46%, as indicated in Schedule 3. Increasing by April 1937 to 2.80%, the yield subsequently declined, reaching a new low of 2.13% in June 1939. In September 1939, as in the case of domestic corporation bonds, the yield on U. S. Treasury Bonds rose to the highest level of the year, 2.65%, but subsequently declined and for the month of December 1939 was 2.35%. The decline continued in 1940 and in March and April the yield average 2.25%. An increase of 0.13% occurred in May 1940, in line with the increase previously noted for corporate bonds in the Aaa, Aa, and A groups, but subsequently this increase was more than cancelled, a decline of 0.50% taking place between June 1940 and the year-end when the yield stood at 1.89%, the lowest figure on record. An abrupt rise in yield occurred in January 1941, the last month shown on the chart. This rise continued, resulting in an average of 2.10% for the following month. However, in March the yield declined to 2.01% and for the week ended April 26, 1941, at 1.91%, was very close to the record low point of 1.89%.

Undoubtedly the lower yield reflected for Treasury bonds in comparison with Moody's average yield on corporation bonds of Aaa rating may be attributed to the low risk associated with these securities and to the fact that income derived therefrom is in part exempt from taxation.

From the data presented in this section, it is apparent that bond yields and interest rates generally, have reached the lowest levels witnessed in many years; in fact, they probably have not been lower at any time in the history of the country.

15 *Utility Interest Rates and Yields and Recent Financing.*

This section deals with the cost of money as indicated by bond yields, preferred stock yields, and common stock earnings-price ratios, with particular reference to public utilities.

*Chart 4.*—Chart 4 shows Moody's bond yield averages commencing with the year 1934, based on 40 public utility bonds according to Moody's bond ratings. Comparison of Chart 4 with Chart 1 reveals that yields on public utility bonds have followed the same generally downward trend in recent years reflected by yields on 120 domestic corporation bonds (Industrials, Railroads, and Public Utilities). It will also be observed that public utility bond yields were at the lowest levels on record at the close of 1940.

It is of interest to note from inspection of the annual averages shown on Pages 1 and 2 of Schedule 4, which immediately follows Chart 4, that the average yield on public utility bonds in each rating group declined substantially between 1934 and 1940, the comparative yields and declines being as follows:

| Rating | 1934 average | 1940 average | Decline since 1934 |
|---|---|---|---|
| | *Percent* | *Percent* | *Percent* |
| Aaa | 3.92 | 2.77 | 1.15 |
| Aa | 4.66 | 2.92 | 1.74 |
| A | 5.55 | 3.24 | 2.31 |
| Baa | 7.49 | 4.05 | 3.44 |

Relatively, these declines range from 29.3% for Aaa bonds to 45.9% for Baa bonds, indicating that investors in public utility bonds have more recently been willing to accept a relatively lower rate of compensation than in 1934 in proportion to the degree of risk assumed.

16 Another method of measuring the willingness of investors in public utility bonds to accept relatively less compensation in proportion to the degree of risk assumed is to compare the ratio of the yield on Baa bonds to that on Aaa bonds. Such ratios computed for the years 1934 to 1940, inclusive, and for the month of February 1941 are as follows:

| Period | Baa yield | Aaa yield | Ratio of Baa to Aaa yield |
|---|---|---|---|
| | *Percent* | *Percent* | *Percent* |
| Year 1934 | 7.49 | 3.92 | 1.91 |
| Year 1935 | 5.56 | 3.52 | 1.58 |
| Year 1936 | 4.87 | 3.21 | 1.45 |
| Year 1937 | 5.09 | 3.21 | 1.59 |
| Year 1939 | 4.80 | 2.77 | 1.73 |
| Year 1940 | 4.05 | 2.76 | 1.46 |
| Feb. 1941 | 3.99 | 2.76 | 1.44 |

From the foregoing, it appears that in 1934 the yield demanded by investors on Baa bonds was 1.91 times that required on Aaa bonds. The ratio declined to 1.45 in 1936, increased to 1.74 in 1938, and dropped back to 1.56 in 1939. In 1940 the ratio stood at 1.46 and in February 1941 was 1.41, or somewhat below the previous low level for the period established in 1936.

The 1941 curves on Chart 4 reflect increases in yields on all classes of public utility bonds in January and February, such increases being particularly noticeable with respect to bonds in the two lower rating groups, namely, A and Baa. However, figures for March and April 1941, not shown on the chart, indicate that such increases have not continued, the yields on April 4, 10, and 18, 1941, compared with those for the month of February, being as follows:

| Rating | Month of February | Apr. 4, 1941 | Apr. 10, 1941 | Apr. 18, 1941 |
|---|---|---|---|---|
| | *Percent* | *Percent* | *Percent* | *Percent* |
| Aaa | 2.76 | 2.75 | 2.76 | 2.75 |
| Aa | 2.88 | 2.90 | 2.91 | 2.86 |
| A | 3.20 | 3.15 | 3.15 | 3.13 |
| Baa | 3.90 | 3.86 | 3.88 | 3.89 |

*Chart 5.*—Chart 5 shows Moody's bond yield averages for the period since 1920 based on 120 domestic corporation bonds representative of three industry groups, namely: Railroads, Public Utilities, and Industrials. The general trends reflected in this chart are similar to those described in connection with the previous charts. Starting from the low point for all groups reached in 1936, the average yields increased until midyear of 1938. The rise in yield for railroad bonds in this period was much more abrupt than in the case of public utilities and industrials and carried the yield on railroad bonds to 5.75%, public utility yields increasing only to 4.11% and industrials to 3.55%. From these points the trend toward lower yields has continued with minor interruptions for all groups, but only in the case of public utilities and industrials have the yields established new low levels. For example, the August 1939 figures were 3.40% (1936—3.69%) for public utilities and 3.21% (1936—3.37%) for industrials. Railroad yields in August averaged 4.41%, which was still considerably higher than the 3.95% yield recorded for January 1937, reflecting the greater degree of risk attaching to railroad securities from the viewpoint of investors. The rise in yields which oc-

carred in September 1939 had been cancelled before the year-end, and subsequently through April 1940 all yields registered further declines, public utility and industrial bond yields falling to the then lowest levels on record, while railroad bond yields still remained 0.38% above the January 1937 low point.

In May and June, following the invasion of the Low Countries, an abrupt rise in yields of all bonds occurred, but this rise was subsequently cancelled, railroad bond yields declining through January 1941 to 3.96%, or within a fraction of the lowest level recorded since 1920, while public utility and industrial bond yields had receded to all-time lows at the close of 1940. The December 1940 averages, as shown in Schedule 5, Pages 1, 2, and 3, were as follows: Industrials 2.93%; Public Utilities 3.13%; and Railroads 4.03% (January 1941, 3.96%). The most recent yields available at the present writing, those of April 18, 1941, show moderate changes compared with year-end averages, as follows: Industrials 3.06%; Public Utilities 3.16%; and Railroads 3.97%.

By inspection of the annual averages shown on Page 2 of Schedule 5, it will be seen that the average yield on 40 public utility bonds declined from 6.30% in 1932 to 4.43% in 1935, and leveled off at approximately 3.90% during the years 1936, 1937, and 1938. In 1939 the average was lower, at 3.48%, than for any year since 1920, while the average for 1940, 3.25%, was well below that for 1939.

Chart 5 indicates that since 1933 the experience of the industrial group has been somewhat more favorable than that of the public utility group, but this is probably due in part to the limited number of industrial bond issues available for inclusion in the two highest Moody bond rating groups.

*Chart 6.*—Chart 6 shows annually, for the period since 1921, Moody's weighted averages of yields on newly issued domestic bonds of industrials, railroads, and utilities. The averages shown are based on yields on newly issued bonds, calculated to maturity and weighted by the amounts of all new issues floated in any given classification or period. The classification "utility bonds," which includes bonds of light, power, and gas utilities, consists wholly of operating companies. The yields indicated in Chart 6 are not, of course, representative of bonds of the same companies or issues at any one date or during any given period.

The chart shows a generally downward trend since 1921 for all classes of companies in yields on newly issued bonds. The trend was interrupted in 1929 and 1932, but commencing in 1933 and continuing until about 1936 the downward trend was greatly accelerated. In 1937 and 1938 the yields leveled off somewhat, but in 1939 a substantial decline occurred, particularly in yields on new railroad and industrial bond issues. The 1939 decline in yield on newly issued light, power, and gas utility bonds was fractional, but nevertheless brought that yield also to the lowest point reached throughout the entire period since 1921. There has been superimposed on Chart 6 from Schedule 10 the average yield on newly issued bonds of electric operating utilities beginning with the year 1935, which shows a somewhat more favorable market for bonds of electric operating utilities than those of light, power, and gas utilities combined.

The chart indicates that from 1921 through 1932 the market for new utility bonds appears to have been somewhat less favorable than for railroad bonds. In 1933, however, this position was reversed and except in the years 1937 and 1938, utility bonds were marketed from 1933 through 1939 on more favorable terms than railroad bonds. It also appears that from 1921 through 1938 the market for new utility bond issues was consistently more favorable than for industrial issues. A reversal of this situation occurred in 1939 when the average yield on new utility bond issues was 3.45%, as compared with 3.09% on new industrial issues. In this connection, however, attention is directed to Page 1 of Schedule 10 where it is indicated that in 1939 a substantially larger proportion of electric operating utility bond issues consisted of lower medium grade bonds of Baa rating than was the case in prior years, which would appear to account, at least in part, for the failure of the yield on new utility bond issues to follow the yield on industrial issues in that year.

The rapid decline in the yield on newly issued domestic bonds, particularly noticeable since 1934, suggested that the decline could be attributed not only to the course of the bond market itself but also to the quality of the offerings. This assumption is confirmed by comparison of the average yield for newly issued utility bonds with the average yield on utility bonds then outstanding of the three highest Moody bond rating groups, i.e., Aaa, Aa, and A. The line superimposed on Chart 6, showing the average annual yield from 1934 to 1939 on 39 utility bonds carrying these Moody ratings, very closely conforms to that showing the

yield on newly issued utility bonds, except in 1939 for the reason above noted, and indicates that a very large proportion of the utility bonds offered during that period consisted of higher grade bonds.

Before proceeding to a discussion of Schedule 7 and subsequent schedules which contain certain data with respect to yields on securities of electric operating utilities, it would be desir-
21 able to point out that such data are not intended to serve as criteria of market conditions directly affecting the securities of natural gas companies; nevertheless, because of the prominent position of both the natural gas and electric utility industries as important components of the nation's public utility industry and because both industries have exhibited a marked rapidity of growth in recent years, it is believed that the presentation of data with respect to yields on securities of electric operating utilities will afford a perspective which will be of assistance in connection with a study of yields on securities of natural gas companies.

The following data with respect to the natural gas and electric utility industries, derived respectively, from "Annual Statistics of the Natural Gas Industry in 1939, Statistical Bulletin No. 41, October, 1940," issued by the American Gas Association, and "The Eectric Light and Power Industry in the United States, Year 1939, Publication No. H 2, March 1940," issued by the Edison Electric Institute, clearly demonstrate the magnitude of the growth experienced by both industries since 1929:

NATURAL GAS INDUSTRY

| Particulars | Year 1939 | Year 1929 | Increase since 1929 | |
|---|---|---|---|---|
| | | | Amount | Percent |
| Number of customers | 7,434,000 | 5,896,000 | 1,538,000 | 26.4 |
| M. C. F. sales [1] | 1,328,243 | 991,036 | 337,207 | 34.0 |
| Revenues [1] | $448,859 | $376,250 | $72,609 | 19.3 |

ELECTRIC UTILITY INDUSTRY

| | | | | |
|---|---|---|---|---|
| Number of customers | 29,104,185 | 24,150,183 | 4,954,002 | 20.5 |
| Kwh. sales [1] | 106,086,983 | 75,294,467 | 30,792,516 | 40.9 |
| Revenues [1] | $2,293,644 | $1,938,520 | $355,124 | 18.3 |

[1] Thousands (000) omitted.

22 It may also be noted that the two industries exhibit a certain similarity in the proportion of revenues derived

from domestic and commercial customers on the one hand and from industrial customers on the other, as indicated in the following comparison of revenues from sales to customers in 1939 by customer groups:

NATURAL GAS INDUSTRY

| Particulars | Domestic | Commercial | Industrial | Total |
|---|---|---|---|---|
| Revenues [1] | [2] $255,805 | [3] $50,362 | [3] [4] $142,692 | $448,859 |
| Percent of total | 57.0% | 11.2% | 31.8% | 100.0% |

ELECTRIC UTILITY INDUSTRY

| | | | | |
|---|---|---|---|---|
| Revenues [1] | [5] $889,584 | [5] $647,671 | [6] $756,389 | $2,293,644 |
| Percent of total | 38.8% | 28.2% | 33.0% | 100.0% |

[1] Thousands (000) omitted.
[2] Includes house heating.
[3] Includes gas sold to electric utilities but excludes gas sold in the field and to carbon black manufacturers.
[4] Includes farm customers.
[5] Small light and power.
[6] Large light and power and all other.

The above summary discloses that approximately one-third of all operating revenues of both the natural gas and electric utility industries is derived from industrial customers, the remaining two-thirds representing revenues from domestic and commercial customers. In the latter category, however, it will be noted that 57% of natural gas revenues are derived from domestic (including house heating) customers, as compared with 38.8% in the case of electric revenues, the proportion of revenues from commercial customers being 11.2% for the natural gas industry and 28.2% for the electric utility industry.

*Schedule 7.*—This schedule reflects annual yields on a group of electric operating utility preferred stocks during the period of twelve years from 1920 to 1940, inclusive, based on averages of yearly high and low market quotations. The 16 issues included in this exhibit comprise all electric operating utility preferred stocks shown in Schedule 19 of a Federal Communications Commission publication issued June 15, 1938, for which preferred dividends and prior requirements were earned in excess of 1.50 times in 1938, and for which market quotations for each year in the period 1929–1940 were available. The title of the publication referred to is "The Problem of the 'Rate of Return' in Public Utility Regulation".

23

Schedule 7 reflects an upward trend through 1933 in yields demanded by investors on preferred stocks, and a downward trend in the years 1934, 1935 and 1936. After 1936 investors' demands fluctuated within a narrow range at approximately the 1936 level. Expressed in terms of an index based on the 1929 average of the yields on the 16 preferred stocks as equal to 100%, the average yield advanced to 106 in 1931, to 117 in 1932, and to 140 in 1933. The average declined to 125 in 1934 and to 103 in 1935. The average in 1936 was about 15 points lower at 88 and, with minor fluctuations in the years 1937, 1938 and 1939, stood at 85.5 in 1940.

Expressed in terms of percent yield, the unweighted arithmetic average yield on the 16 preferred stocks increased from 5.74% to 8.04% between 1929 and 1933, declined to 5.10% between 1933 and 1936, and was 5.19% for 1937, 5.27% for 1938, 4.96% for 1939 and 4.91% for 1940.

*Schedule 7-A.*—This schedule reflects yields on electric operating utility preferred stocks and number of times preferred dividends and prior requirements are earned based on averages of high and low market quotations for the first two months of 1941, with earnings coverage based on income for the latest twelve months for which reported. Schedule 7-A contains a list of 21 preferred stocks and, as indicated in the footnote, includes all presently outstanding electric operating utility preferred stocks shown in Schedule 19 of the previously mentioned publication of the Federal Communications Commission, for which preferred dividends and prior requirements were earned in excess of 1.50 times in 1938.

24

Examination of this schedule will show that of the 21 preferred stocks listed, three issues were selling to yield from 3.81% to 4.00% to investors, two issues to yield between 4.00% and 4.25%, six issues to yield between 4.25% and 4.50%, three issues to yield from 4.50% to 5.00%, four issues to yield between 5.00% and 5.50%, and three issues to yield 5.66%, 6.05% and 6.07%, respectively. In no instance did any issue sell on a basis to yield in excess of 6.07%. Eleven of the twenty-one issues reflected yields of 4.50% or lower on the basis indicated. With respect to nine of these eleven issues, preferred dividends and prior requirements were earned 2.20 times or more, and with respect to six of the ten issues yielding in excess of 4.50% such requirements were earned less than two times.

The unweighted arithmetic average of yields on the 21 preferred stock issues shown in Schedule 7-A is 4.72%, as compared with the 1940 average of 4.91% for the 16 issues shown in Schedule

7. The two-months' average of 4.81% for the 16 issues in Schedule 7 which are also included in Schedule 7–A reflects a continuation in 1941 of a downward tendency in electric operating utility preferred stock yields.

*Schedule 8.*—This schedule reflects annual earnings-price
25 ratios, that is, the percent of net earnings per share to market price, on a group of electric operating utility common stocks during the period of twelve years from 1929 to 1940, inclusive, based on averages of yearly high and low market quotations and published annual earnings per share of common stock. The issues included in the exhibit comprise all electric operating utility common stocks shown in Schedule 26 of the previously mentioned publication of the Federal Communications Commission issued June 15, 1938. The stocks listed from such publication include only those common stocks which are held by the public to the extent of at least 5 percent of the number of shares outstanding.

Schedule 8 reveals that, on the average, from 1929 through 1932 there was an upward trend in common stock earnings-price ratios on these common stocks. In other words, during this period, investors demanded that increasing earnings be available for common stock per dollar of market price. In terms of an unweighted arithmetic average, the average earnings-price ratio for the group of 14 common stocks was 4.06% in 1929, and increased in the three succeeding years, rising to 4.59% in 1930, to 5.95% in 1931, and to 7.74% in 1932, the latter ratio being the highest reflected in any year during the twelve-year period.

In 1933, investors' demands abated somewhat, the average earnings-price ratio declining to 7.02%. In 1934 the ratio rose to 7.57%, but declined to 7.32% in 1935, and to 5.89% in 1936. In 1937 and 1938 the ratio advanced to 6.77% and 7.42%, respectively, but declined to 7.04% in 1939. The ratio rose 0.26% to 7.30% in 1940.

It will be observed that during the twelve-year period
26 the average did not exceed eight percent in any year. Aside from the two years 1929 and 1930 in which the average was less than five percent, there were two years in which the average was less than six percent; one year, 1937, in which it was 6.77%; and seven years in which the average was above seven percent. The highest average, as above stated, was 7.74% in 1932.

*Schedule 8–A.*—This schedule reflects earnings-price ratios of 14 electric operating utility common stocks and the percent of gross income available for common stock based on averages of

high and low market quotations for the first two months of 1941, and on earnings per share for the twelve months ended December 31, 1940. The common stocks listed in Schedule 8-A are the same issues for which earnings-price ratios for the period 1929–1940 are presented in Schedule 8.

Inspection of data contained in this schedule will show that the earnings-price ratios of the 14 common stocks listed were as follows: one at 5.34%; three from 6.00% to 7.00%; five from 7.00% to 8.00%; two at slightly over 8.50%; one at 9.69%; one at 9.83%; and one at 10.14%. Nine of the fourteen issues reflected earnings-price ratios of 8.00% or less on the basis indicated. It will be noted that for three of the five issues selling on a basis in excess of 8.00% the proportion of gross income available for common stock falls below 50%.

The unweighted arithmetic average of the earnings-price ratios of the fourteen common stock issues shown in Schedule 8-A is 7.88%, as compared with the 1939 average of 7.04% and the 1940 average of 7.30% for the same issues shown in Schedule 8. It will be noted that the 1941 average of 7.88% is 0.14% higher than the highest average (7.74% in 1932) reflected for the period 1929–1940.

*Schedule 9.*—Schedule 9 presents annual information on the volume of all corporate financing in the United States since 1934, and the portion thereof representing financing by public utilities, as compiled by The Commercial & Financial Chronicle. The total volume of financing in each year is segregated to show the portions representing new capital and refunding issues, and subdivisions of the amounts representing new capital, refunding and total corporate financing disclose the proportionate amounts of long-term bonds and notes, short-term bonds and notes, preferred stock and common stock issues comprising the total, both for all corporate issues in the United States and for the portion thereof representing security issues of public utilities.

The total amount of new corporate issues in the United States in 1934 was 491 million dollars, in 1935—2,267 millions, in 1936—32 millions, in 1937—2,434 millions, in 1938—2,140 millions, in 1939—2,196 millions, in 1940—2,721 millions, and in the first two months of 1941—587 millions, the total for the entire period being 17,468 millions. Of this total, 8,539 millions, or 48.9%, represented financing by public utilities. By years the proportions of all public utility security issues to all corporate issues

in the United States were as follows: 1934—32.3%, 1935—56.6%, 1936—45.9%, 1937—34.0%, 1938—57.1%, 1939—60.4%, 1940—46.4%, and 1941 through February—56.4%.

In this connection, attention is directed to Note 3 on Page 4 of Schedule 9 which indicates that The Commercial and Financial Chronicle, which is the source of the above data on corporate financing, does not classify nonretailing producers of natural gas and natural gas pipe-line companies as public utilities. Securities issued by such natural gas companies are reported by that publication under the heading "Miscellaneous." However, it is noted that the common stock issue of Southern Natural Gas Company offered to stockholders in January 1941 was classified by the above publication as a public utility issue, although that company is not engaged in the retail distribution of natural gas. The amount of the offering, exclusive of shares subscribed by Federal Water Service Corporation, parent company, was $2,310,070 (reflected under "New Capital" on Page 6 of Schedule 9).

28

The proportion of the total amount of all corporate financing during the period from 1934 through February 1941 represented by new capital was 29.1%. New Capital accounted for 12.0% of all public utility financing and 45.5% of all nonutility financing during the same period. By new capital, in this connection, is meant capital obtained for the purpose of additions to plant and property or to increase working capital. By refunding is meant the issuance of new securities for the purpose of retiring existing obligations at or before maturity, or of affecting reductions in dividend rates on preferred stocks.

New capital raised by corporations in the United States during the period from 1934 through February 1941 aggregated 5,067 million dollars of which public utility issues accounted for 1,028 millions, or 20.2%. of the 1,028 millions of new capital raised by public utilities, 94.7% was represented by bonds and notes, 4.2% by preferred stocks, and 1.1% by common stocks, whereas the corresponding percentages of new capital raised by all nonutility corporations in the United States were as follows: for bonds and notes—72.1%; for preferred stocks—11.4%; and for common stocks—16.5%.

29

The total amount of all corporate issues for refunding purposes during the same period was 12,381 million dollars, of which public utility issues accounted for 7,511 millions, or 60.7%. This clearly demonstrates that public utilities have taken advantage of

the favorable market in recent years to conduct large-scale refunding operations.

Public utility financing during the period since 1934 accounted for the following proportions of all corporate issues: long-term bonds and notes, maturing later than five years from date of issue—7,869 millions, or 53.3% of all long-term corporate issues; short-term bonds and notes—160 millions, or 31.5% of all short-term corporate issues; preferred stocks—487 millions, or 35.0% of all preferred stock issues; and common stocks—23 millions, or 2.9% of all common stock issues. As previously stated, public utility issues of all kinds accounted for 48.9% of all corporate issues over the entire period under discussion. However, during the years 1938 and 1939 public utility financing accounted for very nearly 60% of all corporate financing in the United States and, although the proportion dropped to 46.4% in 1940, it rose to 56.4% in the first two months of 1941.

Analysis of the various types of securities issued by public utilities during the period covered by Schedule 9 reveals that there were no capital stock issues sold in 1934. Small amounts of preferred and common stock representing new capital were sold in 1935, approximately $4,500,000 of preferred stock issues representing new capital were sold in 1936, and approximately $5,700,000 of preferred stock issues and $700,000 of common stock issues representing new capital were sold in 1937. No common stock issues were sold in 1938 and the amount raised from the sale of common stock in 1939 was only $300,000, although preferred stock issues for new capital amounting to approximately $5,100,000 were sold in both years.

In contrast with this record, Schedule 9 reflects the sale by public utilities for new capital purposes of $6,600,000 of common stock and $21,300,000 of preferred stock in the year 1940 and $2,300,000 of common stock and $109,000 of preferred stock in the first two months of 1941. The combined total of such issues in 1940 and 1941 is somewhat in excess of the aggregate of all utility preferred and common stock issues for new capital purposes in the entire preceding six-year period.

*Schedule 10.*—This schedule contains a summary of all known electric operating utility bond issues, other than bonds and debentures having serial maturities, sold during the years 1935 to 1940, inclusive, and shows that during this period 327 such bond issues were sold aggregating in excess of five billion dollars. The sum-

mary on Page 1 is presented by years and discloses the following weighted average yields on newly issued electric operating utility bonds based on offering prices to purchasers: 1935—3.81%; 1936—3.48%, 1937—3.63%, 1938—3.43%, 1939—3.42%, and 1940—3.06%. The weighted average yield on all issues sold during the six-year period, irrespective of rating, was 3.47%.

Page 2 of Schedule 10 reflects average yields on the same bond issue classified according to ratings assigned by Moody's
31 publications. It will be seen that issues aggregating 4.2 billions, or 78.5% of the principal amount of all issues sold during the six-year period, represented bonds of Aaa, Aa and A rating, and issues aggregating only 352 millions, or 6.5% of the total, represented bonds of Baa rating. It thus appears that the major portion of electric operating utility bonds issues sold in the period 1935–1940 consisted of high and medium higher grade bonds.

The summary on Page 2 of Schedule 10 also discloses that average yields to purchasers have declined since 1936. With respect to bonds carrying the four highest Moody's ratings, yields on issues sold in 1940 were lower than in any other year of the six-year period, such yields being as follows: Aaa—2.64%; Aa—2.80%; A—3.07%; and Baa—3.81%.

Of the 327 issues included in the summary for the six-year period, 98 were issues to which no rating was assigned by Moody's publications. The majority of such issues represent bonds which were privately sold. No rating is ordinarily assigned to bonds which are sold privately inasmuch as there is usually no trading in such issues.

*Schedule 10–A.*—This schedule contains certain details in connection with offerings of electric operating utility bond issues sold during the year 1940. Such offerings aggregated approximately $800,000,000 in principal amount. The weighted average yield to purchasers of these issues was 3.06%. The schedule shows, for each issue, the name of the issuing company, month of offering, description of issue, principal amount of offering, price to public, and yield to maturity.

*Schedule 10–B.*—Schedule 10–B contains a list of all electric operating utility bond issues sold during the first two
32 months of 1941, and presents similar information with respect to such issues as that described above in connection with Schedule 10–A. The aggregate principal amount of the issues sold in the two-months' period was $157,991,000. There

were 10 issues sold during this period, including one Aaa issue sold in January on a 2.60% yield basis and two A issues sold to yield an average of 2.96%. Seven issues, to which no rating was assigned, were sold in this period, all of which were sold privately. The weighted average yield on all issues sold was 3.17%.

*Schedule 11.*—Schedule 11 presents a compilation of all known preferred stock issues of electric operating utility companies sold in the period 1935–1940, showing the cost of money to issuing companies and yields to purchasers. The average yield to purchasers of such issues was 4.38% for 1935, 4.62% for 1936, 4.63% for 1937, 4.85% for 1938, 4.99% for 1939, and 4.36% for 1940. Yields on individual issues in excess of $1,000,000 ranged from 3.85% to 5.95%. For the entire period, the average yield on all issues sold was 4.58%.

Comparison with Schedule 10 indicates the relatively low proportion of preferred stock to bonds issued by electric utilities during the six-year period, new issues of bonds and preferred stock having been sold in proportion of about 23 to 1. However, it should not be inferred that such a relationship exists between outstanding bonds and preferred stocks in the capital structures of electric operating utilities. For example, in the volume entitled "Statistics of Electric Utilities in the United States—1939", published by the Federal Power Commission, it is shown on Page X that for 383 Class A and Class B privately owned electric utilities, long-term debt constituted 51.8% of the total amount of securities outstanding as of December 31, 1939, while preferred stocks comprised as of December 31, 1939, addition, common stocks accounted for 32.2% of the securities outstanding and the remainder, or 0.7%, consisted of premiums, assessments, etc., on capital stock.

33

Schedule 11 shows for each issue the net proceeds per share realized by the issuing company from the sale of preferred stock as well as the offering price per share to the public. In addition, it shows the percent relationship of annual dividends both to net proceeds and to price paid by public.

For example, a 4½% preferred stock issue of Appalachian Electric Power Company was sold in December 1940 at $106 per share to yield 4.25% to purchasers. The company realized $102.50 per share as the net proceeds from the sale after meeting all expenses of floating the issue, the dividend requirement of $4.50 per share representing an annual cost to the company for preferred stock capital of 4.39% ($4.50÷$102.50). The expenses of

floating the issue therefore resulted in increasing the annual preferred stock expense of the company over the annual yield to purchasers by 0.14%. Stated another way, the yield to purchasers, 4.25%, plus cost of flotation, 0.14%, equals the annual cost to the company for preferred stock capital, 4.39%.

Inspection of Schedule 11 reveals that the weighted average cost of flotation in connection with electric operating utility preferred stock issues was 0.12% in 1935 (4.50% − 4.38%), 0.15% in 1936 (4.77% − 4.62%), 0.15% in 1937 (4.78% − 4.63%), 0.19% in 1938 (5.04% − 4.85%), 0.22% in 1939 34 (5.21% − 4.99%), and 0.16% in 1940 (4.52% − 4.36%).

Over the entire period 1935–1940, the weighted average cost of flotation was 0.16% (4.74% − 4.58%). In 1940 the cost of flotation for five preferred stock issues carrying a dividend rate of 4½% or lower ranged from 0.11% to 0.16%. These five issues were sold at prices to yield from 3.85% to 4.37% to purchasers.

*Schedule 11–A.*—This schedule contains details of the two electric operating utility preferred stock issues sold to the public in the first two months of 1941. The aggregate offering price of such issues was approximately $8,000,000, and the average yield to purchasers was 4.81%. It will be noted that both issues carried a dividend rate of 5%

*Schedule 12.*—Schedule 12 contains details of all known offerings of electric operating utility common stocks during the period from 1935 through February 1941. Of the six issues listed in this schedule, three were offered to the public in 1940, one was offered in 1939, and the other two issues were offered primarily to stockholders in 1935 and 1937, respectively. In contrast with Schedule 9, Page 5, which reflects the sale of $6,622,520 of new issues of common stock during the year 1940, Schedule 12 reflects common stock sales amounting to $22,687,290 in that year. By reference to the footnotes in Schedule 12 it will be seen that only the issue of West Penn Power Company ($4,320,000), and 68,852 shares of the Indianapolis Power & Light Company issue ($1,652,520) fall within the category of new issues. The difference between the sum of the foregoing amounts, $5,972,520, and the above total of $6,622,520 for common stock issues in 1940, is represented by an issue of common stock of Bridgeport Hydraulic Company, a nonelectric utility, amounting to $650,000.

35 For each issue listed in Schedule 12 there are given the name of the issuing company, a description of the issue,

the offering date, the number of shares offered and amount of offering, the price to underwriters (if underwritten), the net price to company, the price to public in dollars per share, and the cost of flotation in dollars per share and percent of offering price, together with the amount of the issuing company's latest reported annual earnings per share of common stock for a twelve-months' period preceding the offering date, the percent of such earnings per share to offering price, and the percent of gross income available for common stock in the periods for which earnings per share are given.

The first issue in Schedule 12 is that of Boston Edison Company (formerly Edison Electric Illuminating Co. of Boston), comprising 82,289 shares of $100 par common stock offered to stockholders in the latter part of 1935 at a subscription price of $150 per share. Approximately 94% of the shares offered were taken up by stockholders and the remaining shares were offered to the public at a price of $166 per share. The proceeds were used to retire a portion of the company's outstanding indebtedness. On the basis of earnings of $9.73 per share recorded for the twelve months ended September 30, 1935, the average offering price of $150.93 per share resulted in an earnings-price ratio of 6.44%. The proportion of the company's gross income available for common stock in the period mentioned was 61.91%.

The second issue in Schedule 12 was sold as the result of an offering to stockholders of Tampa Electric Company in November 1937 to purchase 31,497 shares of the company's no par common stock at a subscription price of $20 per share. The
36 stockholders subscribed to 30,712 shares, or approximately 97.5% of the shares offered. On the basis of earnings of $2.41 per share for the twelve months ended July 31, 1937, the offering price of $20 per share resulted in an earnings-price ratio of 12.05%. In this connection, it should be mentioned that the range of market quotations for Tampa Electric Company common stock in 1937 was 25¼–41. It is thus apparent that the price of $20 per share paid by stockholders was well below the then current market price.

The next issue shown is that of Newport Electric Corporation, consisting of 59,550 shares of $20 par common stock offered to the public in May 1939 at $29.50 per share. This offering did not represent new financing by the company inasmuch as the stock offered, constituting all of the company's outstanding shares, was sold for the account of Utilities Power & Light Corporation,

former parent. The price of $27.00 per share to underwriters represented a discount of $2.50 per share from offering price to public, and the net proceeds from the sale amounted to $26.85 per share. The cost of flotation was therefore $2.65 per share, or 8.98% of offering price. On the basis of earnings of $2.85 per share for the twelve months ended March 31, 1939, the offering price of $29.50 resulted in an earnings-price ratio of 9.66%.

In April 1940, 714,835 no par common shares of Indianapolis Power & Light Company were offered to the public at a price of $24.00 per share. Of this number, 645980 shares represented previously issued shares which had been held by the trustee for Utilities Power & Light Company, former parent company. The remaining 68,855 shares represented new financing by Indianapolis Power & Light Company, the proceeds from which con-
37 stituted new capital. The price of $22.00 to underwriters represented a discount of $2.00 per share from offering price, and the net proceeds from the entire issue amounted to $21.97 per share, resulting in a flotation cost of $2.03 per share or 8.46% of offering price. Based on pro forma earnings of $1.83 per share for the year ended December 31, 1939, the offering price of $24.00 per share resulted in an earnings-price ratio of 7.63%. The proportion of the company's gross income available for common stock in 1939 was 33.57%. In conjunction with the above offering of common stock Indianapolis Power & Light Company also sold privately an issue of 2,500 shares of 6% cumulative preferred stock as indicated in Schedule 11.

West Penn Power Company offered for sale to the public in April 1940 an issue of 160,000 shares of no par common stock representing new capital. The shares were sold to underwriters at a discount of $2.00 per share from offering price and other expenses of issuance amounted to $0.24 per share, resulting in a flotation cost of $2.24 per share, or 8.30% of offering price. Based on earnings of $1.62 per share for the year ended December 31, 1939, and on offering price of $27.00 per share, the earnings-price ratio was 6.00%. The proportion of the company's gross income available for common stock in 1939 was 52.84%. In the same month the company offered publicly its first mortgage 3% bonds, Series K, due 1970, Rating Aa, in the principal amount of $3,500,000 at a price of 104½ to yield 2.78% to purchasers, as indicated in Schedule 10–A.

In October 1940, 85,000 shares, constituting all outstanding common shares of Michigan Public Service Company, were of-

fered to the public at a price of $14.25 per share. The
38 shares offered had previously been held by the trustee for Inland Power & Light Corporation, former parent company; accordingly, the offering did not represent new financing. The price to underwriters was $12.30 per share, or a discount from offering price of $1.95 per share. Details of other expenses of issuance were not available. The discount to underwriters was equal to 13.68% of offering price. On the basis of earnings of $1.16 per share for the twelve months ended June 30, 1940, and offering price of $14.25 per share, the resulting earnings-price ratio was 8.14%. The proportion of the company's gross income available for common stock for the period mentioned was 24.09%.

*Economic Conditions.*

*Chart 7.*—Chart 7 shows the range of the composite wholesale commodity price index of the U. S. Bureau of Labor Statistics during the period since 1920, as well as the wholesale price indexes for farm products, foods, and industrial products. From January 1926 through December 1937, the indexes are based on 784 commodity series. However, in January 1938 the number of series was increased to 813, and subsequently, in March 1940, to 863; in October 1940, to 887; and, in January 1941, to 889. The 889 items are grouped into 10 major classifications, consisting of farm products, foods, and eight classifications comprising the industrial products group.

Chart 7 clearly portrays the severe decline in prices which started in 1929 and carried prices to record low levels in 1933. It will also be seen that from March 1933 to March 1937 prices rose steadily, with minor interruptions, the combined index rising from 60% to 88% of the 1926 level during this period. Subsequent to
39 1937, there was a gradual but steady decline in wholesale prices, the combined index in August 1939 reaching the lowest level since 1934. However, in September 1939, coincident with the outbreak of war in Europe, all indexes advanced sharply. It is of interest to note that wholesale prices of farm products and foods advanced to a much greater extent than prices of industrial products, as indicated below:

| | August 1939 | September 1939 | Net increase |
|---|---|---|---|
| All commodities | 75.0 | 79.1 | 4.1 |
| Farm products | 61.0 | 68.7 | 7.7 |
| Foods | 67.2 | 75.1 | 7.9 |
| Industrial products | 80.1 | 82.1 | 2.0 |

Chart 7 discloses that the abrupt rise in wholesale prices which occurred in September 1939 was followed by a general decline which continued through August 1940. Following a moderate rise in September 1940 an upward trend in wholesale prices was maintained through the remainder of 1940. Data now available disclose that the general level of prices has continued to rise in 1941. The extent of the rise in wholesale prices since August 1940 and the distribution of price increases among the major classifications of commodities are indicated in the following comparison of index figures for the month of August 1940 and for the week ended April 19, 1941:

| Number of commodities | Classification | August 1940 | Week ended April 19, 1941 | Percent increase |
|---|---|---|---|---|
| 889 | All commodities | 77.4 | 83.0 | 7.24 |
| 67 | Farm products | 65.6 | 75.0 | 14.33 |
| 123 [1] | Foods | 70.1 | 77.8 | 10.98 |
| 699 | Industrial products | 82.0 | 86.0 | 4.88 |
| 110 [1] | Building materials | 93.3 | 100.0 | 7.18 |
| 138 | Chemicals and allied products | 76.7 | 82.2 | 7.17 |
| 24 | Fuel and lighting materials | 71.1 | 73.3 | 3.09 |
| 41 | Hides and leather products | 96.9 | 104.3 | 7.64 |
| 63 | House-furnishing goods | 88.5 | 91.6 | 3.50 |
| 146 | Metals and metal products | 94.9 | 97.8 | 3.06 |
| 114 | Textile products | 72.3 | 80.5 | 11.34 |
| 63 | Miscellaneous | 76.7 | 78.4 | 2.22 |

[1] Duplications have been eliminated from the total. 22 farm products are duplicated in foods. 2 metals and metal products are duplicated in building materials.

It will be seen from inspection of the last column shown in the above summary that since August 1940 all indexes have increased, the percentage gains being 14.33% for farm products and 10.98% for foods. Although standing at a higher level in relation to the 1926 average than the farm products and foods indexes, the index for the industrial products group in April 1941 was only 4.88% higher than in August 1940. The more important changes in the subgroup industrial products indexes were increases of 11.34% for textile products; 7.64% for hides and leather products; 7.18% for building materials; and 7.17% for chemicals and allied products.

*Chart 8.*—Chart 8 shows the Federal Reserve Board's index of industrial production and the U. S. Department of Labor's indexes of factory employment and pay rolls for the period since 1920, all without adjustment for seasonal variation. The Federal

Reserve Board also publishes a seasonally adjusted index of industrial production, as well as an adjusted index of factory employment derived from the unadjusted indexes computed by the U. S. Department of Labor. For the purposes of this study it was considered preferable to use unadjusted indexes for all three series in order to obtain uniformity. Comparison of the adjusted and unadjusted indexes for industrial production discloses slight variations, but the general pattern of the indexes over a period of time is quite similar. This is because adjustments for seasonal variation are applied to monthly data and cancel out when monthly figures are averaged for a year.

It will be noted that the base period of the index of industrial production is shown as 1923–1925, whereas the index as published uses the years 1935–1939 as the base period. This change in base period was made in order to permit comparison of the industrial production index with the indexes of factory employment and pay rolls for which the base period is also the years 1923–1925.

41

The Federal Reserve Board recently published a complete revision of its index of industrial production, the revised index being constructed with the average for the years 1935–1939 as equal to 100, whereas in the old index the average for the years 1923–1925 was taken as equal to 100. As a result of the revision, which was carried back through 1919, the new index is derived from 81 individual monthly series directly representing all principal groups of industries in manufacturing and mining, as compared with 60 individual series from which the old index was derived. The index of industrial production was compiled by the Federal Reserve Board for the purpose of measuring changes in the physical volume of the country's industrial output.

Chart 8 indicates that the 1929 peak in industrial production was reached when the index advanced to 134.5 in September of that year. Commencing in October 1929, the index declined without important interruptions until it had fallen to 59.8 in mid-year of 1932. Following an advance in the Fall of 1932, which was largely cancelled in the first few months of 1933, the index advanced to 96.6 in 1933. After several major fluctuations, the index commenced to rise late in 1934 and this rise continued at an accelerated pace which carried the index 9.2 points above the 1929 peak to 143.7 in May 1937. Thereafter, the index fell

abruptly through the remainder of 1937 and more gradually in succeeding months, reaching its next low point in May
42 1938 at 93.1. From that level the index advanced to 117.2 in November. Following a minor recession in the early months of 1939, a substantial increase in industrial production resulted in the establishment of the index in October and November 1939 at a level slightly higher than the 1937 peak. After declining to 127.6 in April 1940, the index advanced sharply through the remainder of the year to a 1920–1940 record peak of 155.2 in November and December. It will be observed that the average level of industrial production in 1940, 139.9, was well above the averages of 126.4, 129.9, and 124.1, respectively, shown for the previous peak years 1929, 1937, and 1939.

Data now available disclose that following a minor decline from the December level in January 1941, the index of industrial production rose above the December level to 158.6 in February 1941 and 164.4 (preliminary) in March 1941.

Chart 8 shows that the general course of the index of industrial production has been closely followed by the indexes of factory employment and pay rolls throughout the period since 1920, although the latter indexes have shown a tendency in recent years to pursue lower levels than formerly in relation to the industrial production index. At the peak of industrial production in 1929 (134.5), the employment and pay rolls indexes reached simultaneous peaks of 110.3 and 114.4, respectively. The lowest levels recorded in 1932 and 1933 were 61.0 for employment and 38.3 for pay rolls, while the index of industrial production reached a depression low point of 59.8. At the production peaks of 1937, 1939, and 1940, the employment and pay rolls indexes, in comparison with the industrial production index, were as follows:

43

| | Industrial production | Factory employment | Factory pay rolls |
|---|---|---|---|
| May 1937 | 143.7 | 111.5 | 116.1 |
| November 1939 | 144.8 | 107.5 | 103.2 |
| December 1940 | 155.2 | 116.2 | 122.4 |

It is reported that the factory employment and pay rolls indexes for March 1941 were 119.9 and 131.0, respectively, representing increases over December 1940 of 3.7 points for employment and 8.6 points for pay rolls, as compared with an increase of 9.2 points (from 155.2 to 164.4) for industrial production.

It will be noted that although the 1940 average of 139.9 for industrial production was well above the average for previous peak years during the period 1920–1940, the 1940 average of 107.5 for employment was exceeded in 1937 and the 1940 average of 105.4 for pay rolls was exceeded both in 1929 and 1920.

*Chart 9.*—This chart reflects changes in the indexes of durable and nondurable manufactures. These indexes represent two of the three major series on which the Federal Reserve Board's index of industrial production is based, the other series being that on minerals production. The chart also portrays the course of freight carloadings of Class I steam railways by means of an index derived by the Federal Reserve Board from weekly data computed by the Association of American Railroads. The monthly data shown on Chart 9 are adjusted for seasonal variation and cover the period from 1920 to date. The base period for the published indexes for durable and nondurable manufactures is the period 1935–1939; however, the indexes have been recomputed in order to change the base period to 1923–1925, as in the case of the index of industrial production shown on Chart 8. No change has been made in the base period of the published index of freight carloadings.

The Federal Reserve Board's index of durable manufactures covers the production of iron and steel, machinery, transportation equipment, nonferrous metals and metal products, lumber and lumber products, and stone, glass, and clay products. The index of nondurable manufactures covers the production of the following, together with products thereof: textiles, leather, manufactured foods, alcoholic beverages, tobacco, paper, printing and publishing, petroleum and coal products, chemicals, and rubber. In the base period used in the published index, i.e., the period 1935–1939, the proportions of the Federal Reserve Board's index of industrial production represented by production of durable and nondurable manufactures, respectively, were 37.93% and 46.87%, with minerals production accounting for the remainder of 15.20%.

Inspection of Chart 9 discloses that the indexes for both durable and nondurable manufactures, after the depression of 1920–1921, advanced without major declines until 1929, reaching peaks of 138 for durable manufactures and 132 for nondurable manufactures in June of that year. Following 1929 both indexes declined sharply, falling to their lowest depression levels in 1932 and 1933. It will be noted that the production index for durable

goods dropped to 31 in March 1933, while the lowest point reached by the nondurable manufactures index was 87 in July 1932. Subsequently, both indexes advanced to reach their next peaks in 1937. However, while the 1937 peak for nondurable manufactures, at 158 in April and May, was considerably higher than the 1929 peak of 132, the durable goods index, at 136 in August 1937, was slightly below the 1929 peak of 138.

The recession commencing late in 1937 resulted in severe declines in both indexes, the decline from the 1937 peak being about 21% for nondurable manufactures and more than 50% for durable manufactures. In the subsequent recovery period from mid-year of 1938 through the close of 1939 both indexes recovered to approximately the 1937 peak level. The upward trend was reversed during the early months of 1940, but thereafter both indexes advanced and by the year-end had exceeded previous peak levels, the indexes for December 1940 being 161 for durable manufactures (1929 peak, 138), and 171 for nondurable manufactures (1929 peak, 132). After a rise to 167 in January 1941, the index for durable manufactures rose to 169 in February and was 167 (preliminary) for March, while the index for nondurable manufactures, after declining to 168 in January 1941, advanced to 171 in February and to 176 (preliminary) in March.

As will be seen from Chart 9, the freight carloadings index exhibits fluctuations occurring generally at the same times and in the same direction as the production indexes for durable and nondurable manufactures. However, it will be noted that the carloadings index in recent years has moved at a considerably lower level than formerly in relation to the production indexes and failed to approach its predepression level in the production peaks of 1937, 1939, and 1940. From a peak of 110 reached in 1929, the carloadings index declined to 49 in 1932, advanced to 84 in 1937, and was 82 at the 1939 production peak. Declining early in 1940 to 69, the index advanced through the remainder of 1940 and in January 1941 stood at 86, the highest level reached since October 1930. Data now available disclose that the index was maintained at 86 in February and advanced to 87 in March 1941.

*Chart 10.*—This chart shows the total amount of national income payments by type of payment annually from 1929 to date, as computed by the U. S. Department of Commerce. A full discussion of these data is contained in a bulletin recently published by the Department of Commerce entitled "Monthly Income

Payments in the United States, 1929–1940" and a revised series covering the period 1929–1939 was published in the October 1940 issue of the Survey of Current Business, a Department of Commerce publication. Briefly, the series is intended as an iddex of income payments actually received by individuals. For this reason the series is not identical with the annual estimates of national income published by the Department of Commerce. The principal differences are that in arriving at estimates of national income payments, all business savings (except in agriculture) and employer and employee contributions to retirement and unemployment reserve funds are excluded from national income; and all direct relief payments, public-assistance disbursements by governmental agencies, benefits paid under unemployment compensation and old-age insurance programs, and payments on veterans' adjusted service certificates are included.

The chart shows, as might be expected, that the bulk of national income payments represents compensation of employees. The other major classes of income payments in the order of their importance in proportion to the total consist of entrepreneurial income, dividends and interest, Social Security benefits and other labor income, including pensions, and direct and other relief payments.

47

National income payments in 1929 are estimated to have been in excess of 82 billions of dollars. By 1933 the figure had declined to less than 47 billion dollars, or only 57.1% of the 1929 total. In 1934 national income payments increased to 54 billions, in 1935 to 58.8 billions, in 1936 to 67.8 billions and in 1937 to 71.8 billions. From 1937 forward the chart shows for each month a twelve-months' moving total in order to disclose the trend. It is indicated that the trend of national income payments was steadily downward through all of 1938 with the result that total income payments for that year were about 5½ billion dollars less than in 1937. Beginning in 1939, however, this downward trend was reversed, and each month during 1939 and 1940 has witnessed a gradual but consistent increase in total income payments with the result that national income payments in 1939 exceeded the total for 1938 by almost 4 billions of dollars, and 1940 payments exceeded those for 1939 by over 4 billions. It will be noted that total income payments of 74 billions in 1940 exceeded the 1937 total by 2½ billions, but amounted to about 8 billions less than the 1929 total.

*Chart 11.*—In any discussion of national income, some means of determining the relative value of the dollar, that is, its purchasing power over the necessities of life, is desirable in order to compare changes in real income as distinguished from cash income. For this purpose, an index of the cost of living may be used. Such an index has been computed by the National Industrial Conference Board to show the trend of living costs of wage earners' families. The index is based on a comprehensive list of retail prices and rents in five classifications which are weighted according to their relative importance as follows: Foods, 33; Housing, 20; Clothing, 12; Fuel and Light, 5; and Sundries, 30. In the latter group are included such items as household furnishings, reading materials, recreation and tobacco, as well as organization dues, medical care, carfare, drugs, etc.

48

By obtaining the reciprocal of the cost of living index (using 1929 as the base year) the purchasing power of the dollar at 1929 prices may be determined for any date. For example, Schedule 17 indicates that the cost of living index for the year 1933 was 74.9. The reciprocal of this index is 1/74.9, or 0.01335, which, translated into dollars and cents, becomes $1.335. This represents an increase of 33.5 percent since 1929 in the purchasing power of the dollar in its command over the necessities of life for the average wage earner's family.

To illustrate, let it be assumed that in 1929 four units of a given commodity could be purchased for $1.00; and that by 1933 the cost of living index had declined from 100 to 80, and the same four units could be purchased in 1933 for $0.80. It is clear that, at $0.20 per unit in 1933, it would be possible to purchase five units for $1.00 in that year, as against four units in 1929, so that the 1933 dollar would purchase 25% more of that commodity than the 1929 dollar, or, in terms of 1929 prices the 1933 dollar was worth $1.25.

However, Schedule 17 indicates that for every $100 of income payments received by individuals in the year 1929, only $57.10 was received in 1933. On the basis indicated above, each dollar of this reduced amount of income was worth 1.335 times as much as the 1929 dollar in its command over the necessities of life, so that $57.10 of 1933 cash income was equivalent to $76.20 of 1929 cash income. Therefore, although the index of national income payments declined from 100 in 1929 to 57.1 in 1933, the decline in real income was only from 100 to 76.2.

49

In other words, the effects of the depression would have been much more severe for all concerned if the cost of living had remained at the 1929 level during the depression period.

It is of interest to note that the purchasing power of income payments received by individuals in 1937, on the basis indicated, was practically the same as it was in 1929. In 1938 there was a decline both in cash income received by individuals and in its aggregate purchasing power, while in 1939 and 1940 there has been consistent improvement from the standpoint of both cash income and real income.

*Comparative Risk.*

In stating the basic principles in connection with the problem of rate of return, it was indicated that the element of risk is a fundamental factor to be considered in the determination of a proper rate of return. Accordingly, this section is devoted to the presentation of data by means of which the impact of risks confronting public utilities and other forms of enterprise may be measured from the standpoint of stability of earnings.

*Chart 12.*—Chart 12 reflects the trend of corporate earnings, that is, net earnings available for preferred and common stock, based on earnings indexes computed by Standard Statistics Company for 13 utilities, 117 industrials, and all Class I railroads. From this chart it may be seen that the trend of utility earnings has not been subject to very sharp fluctuations, as in the case of industrials and railroads. While the earnings indexes for the latter two groups dropped within less than four years from peaks of 140 and 120, respectively, in the latter part of 1929, down to levels indicating substantial deficits in 1933, the reduction in public utility earnings in the same period is indicated by a decline in the earnings index from 140 to 90 (base year 1926=100).

Subsequent to 1933 all indexes exhibited a degree of recovery followed by recession in 1934 and 1935, after which there was continued improvement until 1937. The highest levels reached in the latter year were 131.4 for utilities, 114.4 for industrials, and 34.0 for railroads. A decline in earnings of all three corporate groups commenced in the latter part of 1937, but the decline in utility earnings was much less pronounced. It will be noted that an upward trend in net earnings was maintained by all three groups throughout the year 1939, with the result that 1939 earnings exceeded those for 1938. Utility and railroad earnings for

1939 almost equalled the 1937 calendar-year levels, but industrial earnings still remained approximately 25 percent below the 1937 level.

Earnings for the year 1940 on the basis of actual earnings for the first two quarters and estimated earnings for the third and fourth quarters of the year were above those for the calendar year 1939, with industrials and railroads showing the greater gain. The indexes for the year 1940, as shown in Schedule 18, are as follows: Utilities, 124.5; Industrials, 98.2; Railroads, 26.3. It will be noted that industrial earnings, at 98.2, were somewhat below the 1937 level of 106.1, while utility earnings were slightly lower and railroad earnings were considerably higher than in 1937.

It is of interest to note the average earnings indexes for
51 the eleven-year period 1930–1940 of the three groups of companies, which are as follows: Utilities, 111.7; Industrials, 59.9; Railroads, 11.5. In each instance the earnings index is compared with 1926 calendar-year earnings as equal to 100.

The details supporting Chart 12 are contained in Schedule 18. The names of the thirteen utilities whose earnings form the basis of the public utility earnings index, together with the principal utility service performed by each company or system as measured by the proportion of total operating revenues derived therefrom, are listed on Page 7 of Schedule 18.

An independent compilation of net earnings available for preferred and common stock, as reported by the five predominantly electric utility companies or systems listed on Page 7 of Schedule 18, discloses that the earnings index for those five companies or systems was for the most part on a considerably higher level through the period 1925–1940 than the index for the entire group of thirteen utilities, as may be seen from the following comparison:

| Year | Earnings index | | Year | Earnings index | |
|---|---|---|---|---|---|
| | 13 utilities | 5 electric utilities | | 13 utilities | 5 electric utilities |
| 1925 | 87.3 | 96.5 | 1933 | 97.8 | 100.5 |
| 1926 | 100.0 | 100.0 | 1934 | 88.7 | 98.7 |
| 1927 | 106.9 | 107.2 | 1935 | 93.1 | 107.1 |
| 1928 | 124.0 | 136.3 | 1936 | 121.0 | 114.9 |
| 1929 | 142.6 | 161.0 | 1937 | 125.8 | 132.8 |
| 1930 | 127.7 | 163.8 | 1938 | 107.1 | 116.5 |
| 1931 | 123.6 | 134.3 | 1939 | 123.1 | 137.4 |
| 1932 | 96.9 | 120.6 | 1940 | 124.5 | 143.2 |

The above index for electric utilities may be compared with the following indexes based on net income of the entire private
52 electric light and power industry for the years 1932–1939, as reported in "The Electric Light and Power Industry in the United States, Year 1939" published by the Edison Electric Institute (Publication H 2, March 1940, p. 21): 1932, 120.6; 1933, 98.7; 1934, 95.4; 1935, 103.0; 1936, 112.4; 1937, 123.5; 1938, 110.8; 1939, 121.3. It will be seen that the latter index figures for the entire electric utility industry reasonably approximate those for the five electric utilities in the above summary except that from 1937 to 1939 the earnings level of the above five companies was somewhat higher than that of the industry.

It will be of interest to note the results of the following comparison of earnings indexes of the electric light and power and natural gas industries for the period 1932–1939, with the index for 1932 earnings available for dividends and surplus taken as 120.6 for purposes of comparability:

| Year | Electric light and power industry | Natural gas industry [1] | Year | Electric light and power industry | Natural gas industry [1] |
|---|---|---|---|---|---|
| 1932 | 120.6 | 120.6 | 1936 | 112.4 | 189.1 |
| 1933 | 98.7 | 73.6 | 1937 | 123.5 | 205.0 |
| 1934 | 95.4 | 86.1 | 1938 | 110.8 | 170.2 |
| 1935 | 103.0 | 153.8 | 1939 | 121.3 | 197.2 |

[1] Based on net income available for dividends and surplus as reflected in Volume III, Schedule 2, of this exhibit.

The above index figures for the natural gas industry are based in part on prior years' manufactured gas earnings by companies subsequently changing over to straight natural gas operations during the period mentioned. They also reflect in part the
53 introduction of natural gas in territories not previously supplied with gas service as well as increased net income of companies after commencement of natural gas operations through increased volume of sales, improved operations, or reductions in fixed charges resulting from debt refunding operations. However, while the above earnings indexes for the electric utility and natural gas industries may not be strictly comparable to one another in certain respects, they furnish ample indication that the risks confronting the natural gas industry have not deprived it of an opportunity to achieve substantial growth in recent years.

*Chart 13.*—Chart 13 shows the relationship of net profit to total invested capital for leading American industrial, utility, and railroad corporations, based upon studies and publications of the Standard Statistics Company, and covers the thirteen-year period 1927–1939. Two methods of computing invested capital may be used. By one of these methods invested capital is considered as representing outstanding securities plus surplus and capital reserves. This method is the basis of the data reflected on Chart 13. Net profit, as defined in the computations used for this chart, represents the amount available for fixed charges after depreciation, etc. Accordingly, comparable earnings figures are obtained regardless of differences in capital structure.

It may be pointed out, in connection with Chart 13, that not only are utility earnings more stable than earnings of industrials and railroads but for the ten-year period 1930–1939 the average percent of utility net profit (as defined) to total invested capital was approximately equal to the industrial average and, of course, considerably higher than the railroad average. The aver-
54 ages for the ten-year period are as follows: Utilities 5.57%; Industrials 5.59%; Railroads 3.17%.

Page 3 of Schedule 19 contains a list of the 21 leading utility corporations for which the relationship of net profit to invested capital is expressed in Chart 13. For each utility corporation or system in the list is shown the principal utility service rendered, together with the percent of total operating revenues derived from such service. It will be noted that 13 of the 21 utility corporations or systems listed therein are predominantly electric utilities.

*Chart 14.*—Chart 14 portrays a similar relationship to that shown in Chart 13. However, in the data supporting Chart 14, which are contained in Schedule 20, invested capital is represented as the total of property accounts (less reserves for depreciation) plus inventories of materials and supplies. The resulting chart does not differ greatly from Chart 13 in the trends shown for the different types of companies, although the percentage levels differ somewhat.

In this instance, also, an independent compilation was made of underlying data for the 13 predominantly electric utility companies or systems (see page 3 of Schedule 19) included in the group of 21 leading utility corporations. From a comparison of the results of such compilation with the percentages of net profit

to property accounts and inventories for the group of 21 leading utility corporations, as presented on the following page, it would appear that the results shown in Chart 14 with respect to the group of 21 utility corporations very closely reflect the earnings experience of the electric utilities included in the group during the thirteen-year period 1927–1939.

| Year | Percent net profit | | Year | Percent net profit | |
|---|---|---|---|---|---|
| | 21 utilities | 13 electric utilities | | 21 utilities | 13 electric utilities |
| 1927 | 7.3 | 7.3 | 1934 | 5.8 | 5.8 |
| 1928 | 7.5 | 7.2 | 1935 | 5.7 | 5.8 |
| 1929 | 7.6 | 7.4 | 1936 | 6.1 | 6.0 |
| 1930 | 7.3 | 7.3 | 1937 | 6.4 | 6.3 |
| 1931 | 6.9 | 6.8 | 1938 | 6.2 | 5.9 |
| 1932 | 6.1 | 6.2 | 1939 | 5.9 | 5.8 |
| 1933 | 5.8 | 5.8 | | 6.2 | 6.2 |

*Local Conditions.*

This section is presented to afford a perspective of economic conditions in the general area of ultimate consumption of natural gas supplied through the facilities of Hope Natural Gas Company.

*Chart 15.*—Chart 15 shows the comparative rediscount rates of the New York and Chicago Federal Reserve Banks and indicates that these rates are at the lowest point since 1920, namely, 1.00% and 1.50%, respectively. No change in rate has been effected by either bank since August 1937 as indicated in Schedule 21 which shows all changes in the rediscount rates effected by both Federal Reserve Banks since 1918.

*Schedule 21-A.*—This schedule presents a compilation of the year-end rediscount rates of the twelve Federal Reserve Banks for the years 1929 to 1940, inclusive. It will be observed that in 1937 the rediscount rate of each of the twelve banks, except the Cleveland Federal Reserve Bank, was reduced by one-half percent. The rate then established was 1.50% for all banks, except the Federal Reserve Bank of New York, which reduced its rate from 1.50% to 1.00%. There has been no change in rate since 1937 by any of the twelve banks with the exception of the Federal Reserve Bank of Boston which reduced its rate from 1.50% to 1.00% in 1939.

56 *Chart 16.*—Chart 16 compares averages of rates on commercial loans charged customers by banks in principal cities of the country and shows separately the rates for banks in New

York, banks in seven northern and eastern cities exclusive of New York City, and banks of eleven southern and western cities. As indicated in Schedule 22 supporting the chart, the figures relate to rates charged by reporting banks to their own customers as distinguished from open market rates. The averages are based on rates reported for all new commercial and industrial loans with maturity of 30 days to 12 months, except paper purchased in the open market and loans secured by real estate, but including business loans secured by stocks and bonds as well as business loans otherwise secured and unsecured. Loans to building and loan associations, insurance companies, credit unions, and similar organizations not engaged directly in financing the sale of consumers' durable goods, loans to hospitals, educational institutions, etc., and personal or installment loans to individuals other than for business purposes are not included.

The cities included in the group of seven other northern and eastern cities and eleven southern and western cities are listed on Page 2 of Schedule 22. As indicated on Chart 16, the rates charged customers by New York City banks are considerably lower than those charged by the banks outside New York, while the rates of the seven other northern and eastern cities in turn are lower than the rates charged by the eleven southern and western cities. The comparative average rates for the year 1940 are as follows: New York City 2.04%; seven northern and eastern cities 2.56%; eleven southern and weestern cities 3.38%.

57 It will be noted that all rates drifted steadily lower during the period from the Spring of 1933 through 1936, after which time a certain degree of stability is noted until the early part of 1939. In the latter year changes were made both in the method of computing the averages and in the periods for which rates are reported. It should be noted that the current quarterly averages are not strictly comparable with the monthly averages shown for the period 1928–1938. The two series differ in that the monthly series were based on reports of prevailing rates, whereas for the present quarterly series each bank reports the numbers and amounts of loans made at specified rates and within various rate ranges. On the new basis, rates are at a higher level for New York City by approximately one-half per cent.

Rates currently are based on reports made four times a year covering data on new loans for the first half of March, June, September, and December. Between September 1938 and September 1939 rates first increased and then declined, but it is reported that this

movement was largely due to seasonal influences. Because of methods of reporting, seasonal influences did not appreciably affect the rates that were formerly reported by banks. The rates charged customers by New York City banks and banks in the seven other northern and eastern cities, which include the cities of Pittsburgh, Cleveland and Chicago, reflected a decline in the last quarter of 1939 which was followed by rises in the first and third quarters and declines in the second and fourth quarters of 1940. On the other hand, rates charged by banks in the eleven southern and western cities reflected no substantial change in the last
58 quarter of 1939 but exhibited slight increases in the first three quarters of 1940 and a decline in the fourth quarter.

*Schedule 23.*—This schedule contains comparative indexes of department store sales for the United States as a whole and for the Cleveland and Richmond Federal Reserve Districts. The Cleveland District includes the State of Ohio, the western portion of Pennsylvania, the eastern portion of Kentucky and a portion of West Virginia, and the Richmond District includes the remainder of West Virginia, the States of Maryland, Virginia, North Carolina, South Carolina, and the District of Columbia. Schedule 23 indicates that during the period since 1919 the level of department store sales in the above districts compared rather favorably with that for the nation, the index for the Cleveland District being somewhat below the national level and that for the Richmond District considerably above the national level, particularly in recent years. The respective indexes for 1940 (1923-1925=100) were as follows: United States 94, Cleveland District 96, Richmond District 122.

*Schedule 24.*—This schedule is presented for the purpose of comparing the relative changes in the level of income payments for the United States and the States of Ohio, Pennsylvania, and West Virginia for the period since 1929. An index with 1929 as the base year has been computed from estimates published by the National Income Section of the U. S. Department of Commerce. The United States totals in Schedule 24 have been taken from Schedule 16 described above.

It will be noted that from 1929 to 1933 the index of income payments for the United States declined to 57.1, the indexes for Ohio and Pennsylvania falling somewhat below that level and the
59 West Virginia index declining only to 58.3. Subsequent to 1933 all indexes advanced through 1937, West Virginia ranking highest in that year at 95.2 and Pennsylvania rank-

ing lowest at 83.5, with Ohio slightly above the national total. All indexes declined in 1938 and advanced in 1939, but the respective 1939 levels remained below those for 1937. The United States index, at 85.4 in 1939, was fractionally higher than the Ohio index, 6.9 points above the Pennsylvania index, and 3.9 points below the index for West Virginia. Consequently it may be said that there has been no drastic change in the level of purchasing power in the three States referred to in relation to the country as a whole during the period since 1929.

*Schedule 25.*—This schedule presents comparative statistics on estimated cash farm income, value of manufactured products added by manufacture, and value of all minerals produced for the United States and the States of Ohio, Pennsylvania and West Virginia. In the upper section of the schedule the data are reported in millions of dollars, while in the lower section the dollar amounts have been reduced to an index with the year 1929 as the base year. Figures are not available for all years in all classifications. Inspection of the data in Schedule 25 reveals that the level of estimated cash farm income from livestock and crops (including Government payments beginning in 1933) was somewhat higher for the three States than for the nation. With respect to value added by manufacture in the States' manufacturing industries, it appears that the levels in the biennial census years for the State of West Virginia have been consistently higher than those for the nation since 1929 and that the indexes for the States of Ohio and Pennsylvania have fluctuated within a narrow range mostly below the national average. However, the value of minerals produced, except in the State of West Virginia, has been relatively lower since 1929, and particularly since 1935, than for the country as a whole. It is of interest to note from the upper section of Schedule 25 that the States of Ohio and Pennsylvania are predominantly engaged in manufacturing, while the production of minerals is the major industry of West Virginia and it will be observed that for each State the level of activity in the predominant industry has been maintained on a favorable basis in relation to the national level. For the three States combined, estimated cash farm income aggregated 7.3%, value added by manufacture amounted to 19.6%, and value of minerals produced was equivalent to 19.1% of the national total, in the latest year for which data are reported.

*Idle Money Factors.*

The data in this section are presented for the purpose of showing the present situation with respect to the volume of idle investment

funds and the factors contributing to the growth of such funds in recent years.

*Schedule 26.*—This schedule reflects the total amount of funds carried by member banks of the Federal Reserve System in their reserve balances with the twelve Federal Reserve Banks, together with the portion thereof representing "required" reserves and "excess" reserves, as of the close of each year commencing with 1923.

Required reserves are funds which member banks are required by law to keep on deposit with the Federal Reserve Banks as reserves against deposits made with the member banks by their own customers. Member banks may carry balances with the Federal Reserve Banks in excess of their required reserves; such excess balances constituting what are known as excess reserves.

61. Changes in reserve requirements since June 21, 1917, are shown on Page 2 of Schedule 26. Reserve requirements on demand deposits of member banks vary according to classes of banks. Member banks are classified into three groups: central reserve city banks, reserve city banks, and country banks. Central reserve city banks are member banks located in New York City and Chicago, reserve city banks are member banks in sixty other cities of lesser size, and country banks are member banks located elsewhere. It will be noted that reserve requirements on time deposits are uniform for all member banks, while there are important variations among classes of banks in required reserves based on demand deposits.

It will be noted that in the early years of the period the total reserve balances were not subject to marked fluctuation and excess reserve balances were comparatively small in relation to total reserves, some years in fact, reflecting deficiencies in required reserves. This was the situation prevailing generally prior to 1931. In that year total reserves reached their lowest level following 1923 at 1,961 millions of dollars. In the following two years the reserves increased to 2,729 millions, but the increases in total reserves were reflected by increases in excess reserves which, at the end of 1933, were higher than those shown for any previous year.

From 1933 to 1935 total reserves more than doubled and excess reserves increased by approximately two billion dollars. Reserve balances continued to increase in 1936 but due to an increase in reserve requirements in August of that year excess reserves decreased 860 millions despite an increase of approximately a billion

dollars in total reserves. The increases in reserve requirements in March and May 1937 effected a still further
62 reduction of 772 millions in excess reserves, although total reserves increased about 400 millions in that year.

In April 1938 reserve requirements were reduced to approximately those established in March 1937 and thereafter, with no changes in reserve requirements, total reserves continued to increase to a level in excess of 14 billion dollars at the close of 1940. Required reserves have increased from 5,815 to 7,411 millions since 1937, but excess reserves have increased by 5,400 millions to the unprecedented total of over 6½ billion dollars, the figure at December 31, 1940, being 6,615 millions.

*Schedule 27.*—The purpose of this schedule is to set forth the factors which supply member bank reserve funds and those which use such funds in such manner as to show the various changes which have accounted for the rise in member bank reserve balances in the Federal Reserve Banks between June 1929 and the close of 1940.

The schedule shows that the factors supplying funds for the building up of member bank reserve balances are increases in outstanding Federal Reserve Bank credit, increases in the monetary gold stock, and increases in U. S. Treasury currency outstanding. Decreases in these items operate to decrease member bank reserve balances. Federal Reserve Bank credit consists of bills discounted for or advances made to member banks, bills bought in the open market, holdings of U. S. Government securities, and other items such as industrial advances made under Section 13b of the Federal Reserve Act.

On the other hand, the factors using or drawing upon member bank reserve balances are increases in currency in circula-
63 tion, in U. S. Treasury cash holdings, in U. S. Treasury deposits with Federal Reserve Banks, in non-member bank deposits with Federal Reserve Banks and in other Federal Reserve accounts. Decreases in these items operate to increase member bank reserve balances. The item "other Federal Reserve accounts" consists of the sum of paid-in capital, surplus, other capital accounts, and all other liabilities of the twelve Federal Reserve Banks (excluding funds deposited by member banks and Federal Reserve notes in circulation), less bank premises and all other assets of the Federal Reserve Banks (excluding gold certificates, cash, etc., on hand, holdings of bills discounted, U. S. Government securities, etc.).

Inspection of Schedule 27 will show that the net effect of changes in these factors between June 1929 and December 1940 has been an

increase of 11,670 million dollars in member bank reserve balances with the Federal Reserve Banks. With respect to such increase in member bank reserve balances, it is shown that required reserves increased by 5,078 million dollars and excess reserves increased by 6,592 million dollars.

It is apparent from inspection of Schedule 27 that the most important factor contributing to the increase in member bank reserve balances has been the increase in the monetary gold stock. From approximately 4 billion dollars in June 1929 the gold stock had increased to nearly 22 billion dollars in December 1940, a growth of 18 billion dollars during the period.

Analysis of the growth in the gold stock reveals that approximately 13¾ billion dollars of the increase has originated since 1934. Available data indicate that about half of this increase was accounted for by the net movement of capital to this country from foreign countries, not including over 4 billion dollars of gold imports arising from unaccounted-for transactions. The remainder of the increase was accounted for principally by a favorable net balance of trade and services with foreign countries and domestic gold production, which were offset to some extent by net imports of silver.

64

*Schedule 28.*—This schedule shows comparative figures for all years since 1923 on total deposits and total loans and investments of all banks in the United States as contained in annual and monthly publications of the Board of Governors of the Federal Reserve System. Data are shown separately for nonmember banks and member banks of the Federal Reserve System.

The data on deposits reflect an increase of approximately 11.2 billion dollars in total deposits, exclusive of interbank deposits, from June 1929 to December 1940, whereas the comparable figures on loans and investments indicate a decrease during the same interval of about 4.3 billion dollars. The comparison reflects a net increase in uninvested funds during the period since June 1929 of 15.5 billion dollars for all banks in the United States.

For member banks of the Federal Reserve System the increase in deposits during the same period was 13.7 billion dollars which was offeset by an increase in loans and investments of 1.4 billion dollars, indicating a net increase of 12.3 billion dollars in uninvested funds of member banks during the period. This amount is seen to correspond fairly closely to the increase of 11.7 billions in member bank reserve balances, between June 1929 and December 1940, shown in Schedule 27.

65 Because of reserve requirements imposed upon member banks by law, it is evident from Schedule 27 that they are restricted in the use of reserve balances for expansion of loans and investments to that portion thereof representing excess or idle reserves. Such excess reserves, as above stated, amounted to 6,615 million dollars at the close of 1940. It is apparent, however, that loans and investments could be expanded by an amount several times greater than the current aggregate of excess reserves before the latter would be absorbed into required reserves under operation of the reserve requirements presently in effect. This possibility arises from the fact that expansion in loans and investments by the member banks considered as a group would give rise to increased deposits, unless there are offsetting influences, whereas the member banks would be required to increase their reserves against such increased deposits only to the extent of a portion of the amount of the additional deposits created by the new loans and investments, as indicated by the required percentages of reserves to deposits shown on Page 2 of Schedule 26.

From the data presented in this section, it may be seen that opportunities for investments, because of the huge growth in the volume of idle funds, have been more limited in recent years than formerly, particularly in view of the fact that since the beginning of 1934, as reflected in Schedule 9, more than seventy per cent of all corporate financing in the United States has been for refunding purposes. This situation with respect to idle funds has been reflected in the declining level of interest rates during the period since 1934.

66 STATEMENT ON VOLUME III OF EXHIBIT

As previously stated, Volume III of this exhibit contains general statistics pertaining to the natural gas industry, and in addition presents facts with respect to the ownership, issuance, prices and yields of securities of natural gas companies. The statistical data are contained in Schedules 1 to 4, inclusive, and Charts 1 to 3, inclusive, as listed in the Table of Contents. The data pertaining to securities of natural gas companies are contained in Schedule 5, together with its underlying Schedules 5-A, 5-B, 5-C, 5-D, 5-E, 5-F1, 5-F2 and 5-G, and in Schedules 6 to 9, inclusive. Information respecting the ownership and corporate affiliations (in the natural gas industry) of Hope Natural Gas Company and certain details in connection with recent financing by its parent, Standard Oil Company (New Jersey), are contained in Chart 4 and Schedules 10 and 11.

*Operating and Financial Statistics of the Natural Gas Industry.*

*Schedule 1—Revenues From Sales to Consumers.*—Schedule 1 portrays the growth of the natural gas industry from the standpoint of revenues, volume of gas sales, and number of customers by years from 1929 to 1939, both inclusive, as taken from Statistical Bulletin No. 41, October 1940, published by the American Gas Association under the title "Annual Statistics of the Natural Gas Industry in 1939." The data on revenues, gas sales and customers are set forth under separate captions in the upper, middle, and lower portions of the schedule.

67 As indicated in the footnote, the figures do not include natural gas used in field operations and in the manufacture of carbon black or gas used by distributing companies in the conduct of their own operations. Furthermore, the statistics do not include data for companies selling mixed manufactured and natural gas.

By referring to the upper section of the schedule, it will be seen that during the eleven-year period revenues increased from 376 million to 448 million dollars, or by approximately 19 per cent. With the general falling off of business in 1938, revenues declined some 28 million dollars below the 1937 level but in 1939 they increased approximately 33 million dollars and exceeded 1937 revenues by over 5 million dollars. Following 1929, revenues increased somewhat in 1930, fell off in 1931, 1932, and 1933 and recovered in 1934, each year thereafter except 1938 reflecting a substantial increase over the previous year. According to the report of the American Gas Association for December 1940, revenues for the year 1940 have reflected an increase of 39.3 million dollars, or 8.7%, over the revenues for the year 1939, such increase amounting to 24.5 millions for domestic sales, 5.1 millions for commercial sales, and 9.7 millions for sales to industrial and electric utility customers.

The classification of revenues shown in Schedule 1 reveals that revenues derived from sales to domestic consumers, including natural gas sold for househeating purposes, constitutes substantially more than half of the total revenues reported. In 1929 such revenues amounted to $223,000,000 and, while falling off to the extent of 5% at the low point of the depression, recovered rapidly and were $32,000,000 higher in 1939 than in 1929 and, as indicated above, increased $24,500,000 in 1940.

68 Commercial revenues have shown consistent improvement during the eleven-year period, except in 1933 and 1938, increasing from $32,000,000 in 1929 to over $50,000,000 in 1939, a gain of over fifty per cent. A further increase of $5,000,000 occurred in 1940.

Revenues from industrial sales, including natural gas used as fuel by electric utilities, amounted to $120,000,000 in 1929. During the depression years, revenues from this source declined to $75,000,000 in 1932, but subsequently increased and by 1937 were $26,000,000 higher than in 1929. In 1938 revenues from industrial and electric utility consumers amounted to $126,000,000 or $20,000,000 less than in 1937, but in 1939 recovered to $142,000,000 which amount, however, was still $5,000,000 below the 1937 total. As above indicated, revenues from this class of consumers for the year 1940 exceeded revenues for the year 1939 by almost $10,000,000.

It is thus indicated that the revenues of the natural gas industry in 1940 surpassed all previous levels by a substantial margin, with revenues from each class of consumers at the highest level in the history of the industry.

*Average Annual Revenue per M C. F. of Gas Sales.*—The average annual revenue per M C. F. of gas sold amounted to 38 cents in 1929, was 41.1 cents in 1932, 33.7 cents in 1937, 34.3 cents in 1938, and 33.8 cents in 1939, a net decrease of 4.2 cents since 1929. The average for 1940 was 33.9 cents.

The average revenue from domestic sales was 66.7 cents in 1929 and, after reaching 71.1 cents in 1932 and 1933, gradually declined to 68.6 cents in 1939, a net increase of 1.9 cents per M C. F. since 1929. A further decline to 66.8 cents occurred in 1940.

69 The average revenue per M C. F. of gas sold to commercial consumers has been following a steadily downward trend since 1929 and declined from 55.5 cents in 1929 to 46.1 cents in 1939, and to 45.2 cents in 1940, a net decrease of 10.3 cents per M C. F. since 1929.

The average for industrial and electric utility sales has declined from 20.1 cents per M C. F. in 1929 to 16.9 cents in 1939 and 1940, a decrease of 3.2 cents. However, the 1939 and 1940 average was almost one cent higher than the average of 16.0 cents for 1934.

*Gas Sales to Consumers (M C. F.).* Total gas sales reported for 1929 aggregated 991 million M C. F. In 1932, sales reached the low point for the depression period at 834 million M C. F. Subsequent years through 1937 witnessed rapid improvement in volume of sales and the 1937 total was 1,314 million M C. F. A decline of about 104 million M C. F. took place in 1938, but during 1939 the total again reached a new high level of 1,328 million M C. F. It is reported that in 1940 the volume of sales rose to the record level of 1,441 million M C. F. classified as follows: domestic—419 million M C. F., commercial—123 million M C. F. and industrial and electric generation—899 million M C. F.

The bulk of the large increase of 450 million M C. F. in volume of sales between 1929 and 1940 was brought about by increased sales to industrial consumers. Industrial consumption increased from 597 to 899 million M C. F., while commercial consumption increased from 59 to 123 million M C. F. and domestic consumption increased from 335 to 419 million M C. F. between 1929 and 1940. It may appear that fluctuations in industrial consumption since 1929 have merely reflected changes in economic conditions.
70 However, upon comparison with the fluctuations reflected in the Federal Reserve Board's index of industrial production (see Volume II, Schedule 14, of this exhibit) it is found that, using an index with 1929 as the base year in each instance, industrial consumption did not fall during the depression years to the lowest level reached by the index of industrial production, and in each year since 1934 the index of gas sales to industrial and electric utility consumers has been at a substantially higher level than the index of industrial production. This situation would appear to be accounted for in large part by expansion in the number of industrial customers since 1929, the number having increased from 22,000 customers in 1929 to 43,000 in 1939 and to 46,000 in 1940.

*Average Annual Gas Sales (M C. F.) per Customer.*—The data on average annual sales in M C. F. per customer shown in Schedule 1 are based on the number of customers at the end of each year.

Average annual consumption by domestic consumers declined during the period as a whole, the average M C. F. per customer having fallen from 60.5 in 1929 to 54.3 in 1939. However, the low point was 54.3 in 1934 and there were slight increases in 1935, 1936, and 1937, as well as in 1939, although in the latter year the average was still slightly below the 1937 figure. Increased consumption in 1940 raised the average for that year to 58.6 M C. F. per customer.

The average consumption per commercial customer was 175.6 M C. F. per year in 1929, fell to the low point of 164.2 in 1931, increased to 179.3 in 1932, declined to 170.4 in 1933, and increased thereafter in each year to 204.4 in 1937. It declined in 1938
71 to 192.3, but increased to 202.1 in 1939 and was 218.9 in 1940.

Average industrial sales in M C. F. per customer per year, fluctuated more sharply as would be expected in a period of changing economic conditions such as business has experienced since 1929. The sales per customer were 27,135 M C. F. in 1929, dropped to 17,440 in 1933 and recovered thereafter, reaching 21,294 in 1937. In 1938 the average consumption per customer declined to 18,044 M C. F., but in 1939 it increased to 19,673 M C. F. In 1940 the average declined to 19,550 M C. F. per customer.

*Number of Customers at End of Year.*—The data on number of customers at end of year shown in the lower portion of Schedule 1 reveals a substantial growth since 1929, the number of all customers increasing from 5,896,000 in that year to 7,454,000 in 1939, an increase of 1,558,000 customers. A further gain of 309,000 customers in 1940 brought the number of customers at the close of the year to 7,763,000, classified as follows: domestic—7,157,000, commercial—560,000, and industrial—46,000. In only one year, 1932, is a decline in total number of customers shown although it will be noted that the number of customers did not vary between 1930 and 1931.

Domestic customers increased in number from 5,540,000 in 1929 to 6,870,000 in 1939 and to 7,157,000 in 1940 a gain of 29% in the twelve-year period. Except in 1931 and 1932 there was a substantial increase in the number of domestic customers each year. The number of commercial customers reflected a marked growth during the period since 1929, the increase in this group being from 334,000 in 1929 to 560,000 in 1940, a gain of about 70 percent. The number of industrial customers has more than doubled, increasing from 22,000 in 1929 to 46,000 in 1940.

72 *Average Annual Revenue per Customer.*—The average revenue per domestic customer was $40.34 in 1929. The average had declined to $36.14 by 1934 but improved thereafter, rising to $38.06 in 1937. Following a decline in 1938, the average increased to $37.24 in 1939 and to $39.17 in 1940. Average revenue per commercial customer amounted to $97.54 in 1929. After declining to $85.83 in 1933, the average rose to higher levels in succeeding years and stood at $96.32 in 1937. Following a sharp decline in 1938 a partial recovery was recorded in 1939 for which year the average was $93.09. In 1940 the average increased to $98.96, establishing a record for the twelve-year period. Average revenues per industrial customer fluctuated considerably during the period under discussion. The average was $5,400 in 1929 but declined in $2,800 in 1932. Subsequent improvement was effected through 1937, the average for that year being $3,600. In 1938 the averaged dropped to $3,000, but recovered and stood at $3,300 in 1939 and 1940.

*Schedule 2.*—Schedule 2 contains comparative estimated income statements for the years 1931 to 1939, inclusive, of the companies for which revenues, gas sales, and customer data are presented in Schedule 1, and was taken from the same statistical bulletin of the American Gas Association.

It will be noted that the revenues from gas sales to consumers shown on the first line in Schedule 2 are in agreement with the revenue data shown in the upper portion of Schedule 1. Examination of Schedule 2 discloses that net operating income, designated as "Utility Operating Income" was $107,681,000 in 1939, or about $10,000,000 higher than that for 1938 although $4,000,000 lower than the 1937 figure of $111,811,000 which represented the peak for the nine-year period, and $2,000,000 lower
73 than the 1936 total. The low point following 1931, for which year net operating income was reported at $84,061,000, was reached in 1933 at $65,188,000. In 1934 net operating income recovered to $71,382,000 and increased to $93,508,000 in 1935.

Net income available for dividends and surplus followed the same general trend, starting at $51,103,000 in 1931, declining to $26,940,000 in 1933, rising rapidly to $74,989,000 in 1937, falling to $62,275,000 in 1938, and increasing to $72,152,000 in 1939. It will be noted that although net operating income in 1939 was lower than in 1936, net income available for dividends and surplus was higher in 1939 by $3,000,000, chiefly because of a decrease in interest and other deductions of almost $6,000,000.

Utility plant, which is reported only for the years 1934 to 1939, inclusive, increased from 1934 to 1938 by approximately $111,000,000. In 1939 utility plant was reported at $2,414,490,000, which was about $27,000,000 less than the amount reported for 1938.

*Chart 1.*—This chart shows at the right monthly sales of natural gas by months during the years 1929, 1939, and 1940. At the lower left are shown monthly revenues of the natural gas industry and, at the upper left, revenues of the manufactured gas industry and combined revenues of the total gas industry during the same years.

The revenues for the entire gas industry were higher in 1939 than in 1929, but showed a substantial increase in 1940 over 1939, due to increased revenues from sales of natural gas. Revenues from the sale of manufactured gas show generally a decline although 1940 revenues were higher than those for 1939. The
74 curves in the lower left section of the chart show that the revenues of the natural gas industry have increased substantially since 1929 and are at a new high level in 1940.

The group of curves on the chart at the right shows that the business of natural gas companies is highly seasonal in character,

as indicated by monthly fluctuations in the volume of gas sold. Volume of sales in recent years has been substantially greater than in 1929. Deliveries during all of 1940 were greater in volume than in 1939 and were at the highest level in the history of the industry.

*Chart 2.*—Chart 2 is presented in order to show the monthly trend of sales in 1940 as compared with 1939 both in total and by classes of revenue, i. e., domestic, commercial, and industrial. The chart shows that total monthly revenues in 1940 were substantially higher than in 1939, with the largest consistent gain being in domestic revenues, although industrial and commercial revenues, particularly in the first few months of 1940, also reflected a substantial increase over 1939. The February peak in revenues will be seen to have been accounted for by peaks in domestic and commercial revenues recorded in that month.

*Chart 3.*—Chart 3 is a photostatic copy of a chart taken from the American Gas Association's Statistical Bulletin No. 41, October 1940, after superimposing thereon an added index showing the trend of total natural gas sales since 1929 independently computed from data contained in the statistical bulletin above mentioned. The chart compares the American Gas Association's index of total natural gas consumption by domestic and commercial consumers with its index of manufactured gas consumption by all classes of consumers, and with the Standard Statistics index of industrial activity, the year 1926 being employed as the base year for all indexes. For the added index of total natural gas consumption by all classes of customers, the year 1929 has been taken as equal to 125 (the index for that year of natural gas sales to domestic and commercial consumers only).

75

The reason for the method employed by the American Gas Association of excluding industrial sales in its index of natural gas sales while including such sales in its index of manufactured gas sales is found by comparison of the relationship of industrial sales to total sales. In the case of manufactured gas, industrial sales for the twelve months ended December 1940, as reported in the American Gas Association's Monthly Summary of Gas Company Statistics for that month, amounted to approximately 62.8 million M C. F., or roughly 16% of total manufactured gas sales. However, sales of natural gas for industrial use in the same period, including sales for electric generation purposes, amounted to approximately 899 million M C. F., or 65% of total natural gas sales.

The chart shows that manufactured gas sales rose to 116% of the 1926 level in 1930, fell to somewhat less than the 1926 level in 1933, increased steadily thereafter through 1939, the index reaching about 120 in that year. Sales of natural gas for domestic and commercial consumption, however, have increased to a substantially greater extent since 1926 than manufactured gas sales. The index of such natural gas sales rose to 130 by 1930, dropped to 118 in 1933, which was still far above the 1926 level, advanced to about 146 by 1937, and receded to a moderate extent in 1938, but reached a new peak in 1939. Thus in 1939 the volume of natural gas sales for domestic and commercial use was
76 approximately 54% greater than in 1926, while manufactured gas sales volume was only about 20% greater.

The superimposed index for total natural gas sales fell sharply commencing in 1931 and was approximately similar to that for total manufactured gas sales in 1931 and 1932. Thereafter, however, the index of total sales rose much more abruptly than that for domestic and commercial sales through 1937. The index declined in 1938 but rose to a new peak of 168 in 1939, as compared with the 1939 index of 154 for domestic and commercial sales only.

It will be seen by comparison with the Standard Statistics index of industrial activity that although both the natural and manufactured gas industries experienced a decline in volume of gas sold during the depression years, the volume did not decline below the 1926 level, except to a slight extent in the case of manufactured gas, in contrast with the experience of industry in general, for which a decline in activity of about 45 per cent from the 1926 level was recorded at the lowest depth of the depression.

*Schedule 3.*—Schedule 3 shows the aggregate volume of natural gas production and consumption in the United States for the years 1926 to 1939, inclusive, and the portion of the total gas consumed which was transported in interstate commerce. From 1926 to 1939, natural gas production increased from 1,313 million to 2,477 million M C. F. Consumption, excluding gas used for field operations and manufacture of carbon black, increased from 704 million to 1,446 million M C. F. in the same period. Natural gas transported in interstate commerce increased from 209 million M C. F. in 1929 to 687 million M C. F. in 1939. In other words, since 1926 production has increased 88%, and consumption other than for field
77 use and carbon black manufacture has more than doubled. These increases were accompanied by an increase of over 225% in the quantity of natural gas transported in interstate com-

merce and, as will be seen from column (e) of the schedule, the proportion of the total quantity of natural gas consumed which is transported in interstate commerce has also been steadily increasing. Thus in 1939 this proportion was about 48% of total consumption, whereas in 1926 the proportion was approximately 30%, indicating the increased importance in recent years of natural gas as a commodity in interstate commerce.

*Schedule 4.*—Schedule 4 is presented for the purpose of disclosing the interstate movement of natural gas from and to the States of West Virginia, Ohio, and Pennsylvania, as indicated by data obtained from publications of the U. S. Bureau of Mines. Page 1 of the schedule shows that since 1926 the major portion of the gas produced in West Virginia has been delivered to other States and that the quantity of gas imported from other States has been negligible in proportion to the quantity produced in the State. Of the gas consumed within West Virginia the average consumption by domestic and commercial consumers has approximated one-third, and gas consumed by industrial customers, about two-thirds, of the total. The major portion of natural gas delivered to other States is accounted for by deliveries to the State of Ohio, with Pennsylvania, Kentucky, and Maryland ranking next in the order mentioned.

In 1939, the quantities of natural gas produced and consumed in the State of West Virginia, including receipts from and deliveries to other States may be summarized as follows in millions of cubic feet:

| | | | | |
|---|---|---|---|---|
| 78 | Produced in State | 159,226 | Consumed within State | 69,394 |
| | Received from other States | 12,482 | Delivered to other States | [1]102,314 |
| | | 171,708 | | 171,708 |

[1] Consists of deliveries to: Ohio—70,578; Pennsylvania—25,766; Kentucky—5,051; and Maryland—919.

Page 2 of Schedule 4 shows similar data for the States of Ohio and Pennsylvania. It is indicated that the combined natural gas production of both States was less than that of West Virginia in both 1938 and 1939, although in prior years the reverse situation prevailed, except from 1926 to 1929, inclusive. The data disclose that since 1926 the consumption requirements of the State of Ohio have far exceeded the production of natural gas in that State. With respect to Pennsylvania it appears that the quantity

of gas consumed has been somewhat in excess of that produced except in the years 1935 and 1936. It is of interest to note, with respect to both States, that the largest proportion of gas imported from other States is received from West Virginia.

*Ownership, Issuance, Prices and Yields of Securities of Natural Gas Companies*

*Schedule 5.*—Schedule 5 contains summarized data with respect to the outstanding securities of 43 natural gas companies.

In preparing this list an attempt was made to include all natural gas companies which had the following characteristics:

(1) Companies engaged in the production and transmission of natural gas and sales thereof at wholesale and to main-line industrial customers.

(2) Companies engaged in the transmission of natural gas and sales thereof at wholesale and to main-line industrial cus-
79 tomers. (3) Companies such as those described in (1) and (2) above which also conduct retail distribution operations.

(4) Companies so engaged which have annual operating revenues of $2,000,000 or more.

The purpose of selecting companies conducting operations of the type mentioned with revenues of $2,000,000 or more was to obtain a group of companies exhibiting generally the characteristics of Hope Natural Gas Company.

Schedule 5 sets forth for each of the 43 companies having the characteristics just mentioned the total amount of securities outstanding and a break-down of the total for each company according to classes of securities, i. e., bonds, debentures, notes and advances, preferred stock, and common stock. Also shown for each company and each class of security, based on the most recent information available, are the amounts of securities held by the public, by institutions, and by affiliates. Institutional holdings include securities held by banks, insurance companies, universities, etc.

In this connection, it should be pointed out that Schedules 5–A to 5–G, inclusive, contain details supplementing or supporting the data contained in Schedule 5. For example, Schedule 5–A contains certain information with respect to the bonds, debentures, and notes of the companies listed in Schedule 5 which are held by the public. Schedule 5–B gives details regarding the

identity of institutional holders of bonds, debentures, and notes of the companies and the amounts of individual holdings. Schedule 5–C lists the holdings of bonds, debentures and notes and advances by affiliates. Schedule 5–D shows certain information with respect to preferred stocks of the companies held by the public, and
80 Schedule 5–E sets forth the holdings of preferred stocks by affiliated interests. Schedule 5–F1 contains data on market prices, earnings per share and earnings-price ratios on those common stocks of the companies which are publicly held, and Schedule 5–F2 contains historical data with respect to the earnings and dividends applicable to such common stocks. Lastly, common stock holdings by affiliates of the companies are listed in Schedule 5–G.

The summary at Page 8 of Schedule 5 discloses that the 43 natural gas companies listed therein had securities outstanding as of the latest date for which information is available in the aggregate amount of $1,185,843,857. These outstanding securities consisted of bonds, debentures, and notes and advances aggregating $479,329,723, or 40.4% of the total, preferred stocks in the amount of $98,789,710, or 8.3%, and common stocks in the amount of $607,724,424, or 51.3%. The respective amounts of bonds, debentures, and notes and advances outstanding together with the relationship of each to the total amount of all securities outstanding, were as follows:

| | Amount | Percent of all securities outstanding |
|---|---|---|
| | | Percent |
| Bonds | $262,669,523 | 22.1 |
| Debentures | 45,350,000 | 3.8 |
| Notes and advances | 171,310,200 | 14.4 |
| Total | 479,329,723 | 40.4 |

Of the total amount of bonds, debentures, and notes and advances, affiliated interests held $196,519,200, or 41.0%, institutional holdings totalled $183,459,000, or 38.3%, and holdings by the general public amounted to $99,351,523, or 20.7%. Of the total of
$98,789,710 of preferred stocks outstanding, holdings by af-
81 filiated interests amounted to $35,661,000, or 36.1%, and public holdings amounted to $63,128,710, or 63.9%. Of the common stocks outstanding, amounting to $607,724,424, the public held $205,668,247, or 33.8%, and affiliated interests owned all but a fraction of the remainder.

Applying similar calculations to the total of all outstanding securities of the 43 companies listed in Schedule 5, it is found that the proportion held by the general public was 31.1%, and that held by institutional investors was 15.5%, while the proportion held by affiliated interests constituted 53.4%, or more than one-half of the total.

Inspection of Schedule 5 discloses that with respect to 28 of the 43 companies listed all of the securities outstanding were held by affiliates and institutions; leaving only 15 companies whose securities are available to the general public for investment purposes. The following summary discloses the magnitude of security holdings by affiliates and institutions in the 28 companies which have no securities outstanding in the hands of the general public:

| | Securities held solely by | | | Percent of total for 43 companies |
|---|---|---|---|---|
| | Affiliates | Institutions and affiliates | Total | |
| | | | | *Percent* |
| Bonds, debentures, etc. | $133,392,200 | $136,790,000 | $270,282,200 | 56.4 |
| Preferred stocks | 21,345,000 | 2,000,000 | 23,345,000 | 23.6 |
| Common stocks | 128,778,716 | 139,184,211 | 267,962,927 | 44.1 |
| Total | 283,625,916 | 277,974,211 | 561,600,127 | 47.4 |
| Number of companies | 19 | 9 | 28 | |

Of the remaining 15 companies whose securities are held by the general public in whole or in part, 9 companies have bond issues, 5 companies have preferred stock issues and 13 companies have common stock issues which are traded in the securities markets.

82 Of the outstanding securities of the above 15 companies, aggregating $624,243,30, it is of interest to note that holdings by affiliates amount to $172,316,250 and institutional holdings equal $83,779,000, leaving a balance of $368,148,480 representing holdings by the general public.

The foregoing calculations clearly demonstrate that a substantial proportion of the outstanding securities of natural gas companies is held by affiliated interests and institutional holders. To summarize, affiliated interests and institutional holders owned 79.3% of the bonds, debentures and notes, and advances, 36.1% of the preferred stocks, 66.2% of the common stocks and 68.9% of the total amount of outstanding securities of the 43 companies listed in Schedule 5. On the other hand, securities held by the general public constituted 20.7% of the bonds, debentures and notes,

63.9% of the preferred stocks, 33.8% of the common stocks and 31.1% of the total of all outstanding securities of the 43 companies referred to.

There is presented in an appendix following the written statement contained in this Volume I, a brief description of the history, operations, properties, and subsidiaries of each of the companies listed in Schedule 5.

*Schedule 5-A.*—Schedule 5-A lists the bond and debenture issues of the companies included in Schedule 5 of which any portion was held by the general public. The schedule also lists the bond issues of such companies which were outstanding in the hands of the public during any part of the period since 1937, but which had been subsequently retired. For each issue the schedule shows the name of the issuing company, a description of the issue, the amount of the public offering, the offering price, the approximate yield at offering price, the offering date, the date of retire-
83 ment, the total principal amount outstanding, the portion thereof held by the public and the ratings assigned by Moody's and Poor's publications. The schedule next shows the averages of high and low market prices for the years 1937 to 1940, inclusive, together with the approximate yields to maturity based thereon. This information is followed by data on market prices as of February 28, 1941, and yields to maturity based on such prices. The last two columns of the schedule show the respective current call prices for general and sinking fund purposes.

The first issue shown in Schedule 5-A consists of first mortgage 4% bonds, due 1951, of Arkansas Louisiana Gas Company. This issue, which carried Moody's and Poor's A rating, was offered to the public in 1936 at a price of 98 to yield 4.18% to purchasers. On the basis of average high and low market prices the yield to investors was slightly less than 4.00% in 1937 and 1938, and 3.69% in 1939. The bonds were retired in connection with refunding operations in October 1939, as indicated by Note (d) of Schedule 6, when the company sold privately one issue of short-term, and one issue of long-term serial bonds at par to yield 2.75% and 3.50% respectively, to purchasers.

The next two issues listed consist of pipe-line mortgage bonds of Cities Service Gas Company which were offered in 1927 and 1928 and retired in February 1939. The issues carried Moody's Baa rating and interest rates of 6% and 6½%, respectively, and during 1937 and 1938 were selling below par to yield from 6.36% to 7.06%. In December 1938 as indicated in Note (c) on Page 2 of Schedule

5-A, the above bonds were retired with proceeds from the private sale at par of $20,000,000 of first mortgage 3¾% bonds, due 1947–54 and $15,000,000 of 3¼% notes, due 1940–46, secured by like amount of first mortgage 3¼% bonds of the same maturity. In addition, the company issued $8,000,000 of 3½% debentures to its parent. A portion of the proceeds from the securities sold was applied to reduction of indebtedness due to the parent company.

The next issue consists of Consolidated Gas Utilities Corporation's first mortgage and collateral 6% bonds, due 1943, originally issued in 1928. The bonds carried Moody's B rating and were selling at prices to yield from 11.22% to 18.25% during the period 1937–1940. However, as of February 28, 1941, the bonds were selling on a basis to yield 5.60% and it is reported that in April 1941 the company sold privately a $6,500,000 issue of first mortgage 4% bonds, due 1956, and $900,000 of 5% debentures, due 1951. With the proceeds from the latter issues and from a bank loan of approximately $100,000, the company retired its outstanding 6% bonds.

The next issue listed is that of El Paso Natural Gas Company, consisting of first mortgage 4½% bonds, due 1951. These bonds were offered to the public in 1936 together with an issue of 4¾% convertible debentures, due 1946. The bonds, carrying Moody's Ba rating, were sold at 98½ to yield 4.64% to purchasers and were selling above par in 1937 and 1938 to yield 4.17% and 4.09%, respectively. The 4¾ debentures, carrying Moody's B rating, were offered to the public at par in June 1936 and were quoted at prices ranging from 137½ to 173 during the remainder of 1936. Approximately 80% of the issue was converted into common stock prior to the end of 1936, the conversion ratio being 60 shares of common stock for each $1,000 debenture. The market price of the debentures was apparently influenced by that of the common stock which ranged from 22¾ to 29¼ during 1936. The 4½% bond issue and the unconverted portion of the 4¾% debentures, together with an issue of first mortgage 4% bonds sold privately in 1937, were retired in January 1939 with the proceeds of a $4,000,000 issue of 3% serial notes, due 1939–43, and a $6,000,000 issue of first mortgage 3½% bonds, due 1953. The new bonds were sold privately at 99 to yield 3.59% to purchasers. In 1940 the company sold privately $3,000,000 principal amount of first mortgage 3% bonds, due 1955, at 98½ to yield 3.13%.

The next issue appearing on Schedule 5-A consists of first collateral 6% bonds, due 1943, of Houston Natural Gas Corporation. These bonds were publicly offered in 1928 at par. During the period 1937–1940, average market prices resulted in yields ranging downward in successive years from 5.70% to 4.71%. The bonds were retired in December 1940, the company in September 1940 having sold a new issue of first mortgage 4% bonds, due 1955. The new bonds were offered at par but were selling above call price at February 28, 1941, to yield 3.70% to purchasers. It is of interest to note that the new bonds were assigned Moody's Baa rating, representing an improvement over the Ba rating assigned to the prior issue.

Next in order on Schedule 5-A is a 5% debenture issue, due 1942, of Lone Star Gas Corporation. On the basis of the average market price of the debentures during 1937 up to the date of retirement in November, the yield to purchasers was 4.10%. The outstanding portion of this issue was retired with the proceeds from the sale in August 1937 of 1¾–4% unsecured notes, due 1938–42.

In August 1938, the company offered publicly, at a price of
86 102 to yield 3.33%, a $20,000,000 issue of 3½% convertible debentures, due 1953, carrying an A rating. The market price of these debentures during the years 1938–1940 resulted in yields ranging from 3.07% in 1938 to 2.80% in 1940. The 3½% debentures, together with certain bank loan notes, were retired in March 1941 with proceeds obtained from the sale to banks of $26,000,000 of 2–2¼% notes, due 1941–51, secured by pledge of substantially all of the company's holdings of securities of its subsidiaries.

From inspection of the data covering the various bond issues of Montana-Dakota Utilities Co. it appears that from 1937 until 1939 the company's bonds were selling at yields above 6.00%. However, in May 1939, the company made a public offering of first mortgage 4½% bonds, due 1954, and sold to banks $2,100,000 of 4¼% serial promissory notes, due 1940–46. With the proceeds the company retired all of its previously outstanding debt with the exception of the 4½% debentures which had been issued in 1936. The new 4½% bonds, which were assigned Moody's Baa rating, were offered at a price to yield 4.41%; but based on subsequent market prices the yield declined to 4.21% in 1939 and to 4.04% in 1940. In January 1941 the company retired its outstanding 4½% debentures, together with certain note indebtedness, through the issuance of 1½–3½% notes, due 1941–50, which were sold to

banks. In the same month the company retired its outstanding 4½% bonds, due 1954, which had been publicly offered in May 1939, together with an issue of 4½% bonds, due 1956, which had been sold privately in 1940. The latter two issues were retired with the proceeds from the sale in January 1941 of $7,500,000 of first mortgage 3½% bonds, due 1961, and $2,500,000 of first mortgage 2½% serial bonds, due 1942–49. Moody's Baa rating was
87 assigned to both issues. The new 3½% bonds were offered at a price of 103½ to yield 3.26% to maturity and at February 28, 1941, were quoted at 102¼ resulting in a yield of 3.34%. The shorter-term 2½% serial bonds were offered at prices resulting in yields ranging from 0.63% to 2.25%, according to maturity, and appear to have been sold privately inasmuch as a quotation on the issue as of February 28, 1941, was not available.

The next two issues consist of 5½% and 6½% first mortgage bonds of North Penn Gas Company, the former maturing in 1957 and the latter in 1942. Portions of the 5½% issue were sold to the public in 1927 and 1930, respectively, the 6½% issue having been offered in 1932. Both issues carry Moody's A rating. The 5½% issue was originally offered at discounts below par but in the period 1937–1939 was quoted at average prices in excess of par to yield slightly above 5.00%. The average price in 1940 was 99, resulting in a yield of 5.59%. However, at February 28, 1941, the issue was again selling above par to yield 5.36% to maturity. Quotations are not available on the 6½% issue.

Oklahoma Natural Gas Company in June 1936 issued $20,000,000 of first mortgage 4½% bonds, due 1951, rating Baa, at a yield of 4.64% and at the same time offered publicly a $10,000,000 issue of 5% convertible debentures, due 1946, rating Ba, at par. During the years 1937–1939 the yields on these issues reflected substantial declines and in 1939 the 4½% bonds were selling on a 3.92% yield basis and the 5% debentures were quoted at prices resulting in an average yield of 4.15%. In connection with refunding operations the company in August 1939 made a public offering of $17,000,000
88 of first mortgage 3¾% bonds, due 1955, of Baa rating, at a price of 103½ to yield 3.46% to purchasers. With the proceeds from the sale, together with proceeds from an $8,000,000 issue of unsecured 2¾% promissory notes, due 1941–46, and from the sale of 58,000 shares of $5.50 convertible prior preferred stock, the company retired its outstanding 4½% bonds and 5% debentures together with 22,200 shares of 6%, $100 par, convertible prior preference stock. In 1939, subsequent to their is-

suance, the new 3¾% bonds were selling on a 3.29% yield basis. In 1940 the average yield declined to 3.20%, and at February 28, 1941, the bonds were quoted at 2½ points above call price to yield 3.09%.

The next group of issues listed in Schedule 5–A is comprised of bond issues of Pacific Lighting Corporation and its subsidiaries, Southern California Gas Company and Southern Counties Gas Company of California. The first issue shown consists of 4½% debentures, due 1945, of Pacific Lighting Corporation. These debentures, carrying Moody's A rating, were publicly offered in 1935 at par. During the years 1937 and 1938 in which the debentures were outstanding they were selling at prices to yield 3.26% and 3.85%, respectively. The 4½% debentures then outstanding were called on April 5, 1939, the funds for their retirement having been obtained from the sale of $7,000,000 of 3% unsecured promissory notes, due 1940–49.

Southern California Gas Company in March 1931 offered a $12,500,000 issue of first mortgage 4½% bonds, due 1961, and in July 1935 sold $15,000,000 of first mortgage 4% bonds, due 1965. Moody's Aaa rating was assigned to both issues. In the years 1937–1940 the 4½% bonds were selling at prices considerably above par to yield approximately 4.00% throughout the period. The 4% bonds, which were offered in July 1935 at 101½ to yield 3.91%, were being sold during the years 1937–1940 on the basis of yields ranging from 3.74% in 1937 to 3.45% in 1940. Both issues were retired in November 1940 with the proceeds from a public offering in September 1940 of $30,000,000 of first mortgage 3¼% bonds, due 1970, at a price of 103½ to yield 3.07%. During the remainder of 1940 the bonds were selling on a 2.94% yield basis and at February 28, 1941, the bonds were quoted at 105¾ to yield 2.95%. It is reported that in April 1941 the company floated an additional $5,000,000 principal amount of first mortgage 3¼% bonds, due 1970, at a price of 104¼ to yield 3.03% to investors. The 3¼% bond issues offered in 1940 and 1941 were assigned Moody's Aa rating, whereas the prior bond issues had carried the Aaa rating.

Southern Counties Gas Company of California in January 1941 offered publicly $11,500,000 principal amount of first mortgage 3% bonds, due 1971, rating Aa, from the proceeds of which the company retired its outstanding first mortgage 4½% bonds, due 1968, also rated Aa, which has been sold to the public in 1928. It is of interest to note that whereas the 4½% bonds averaged

89.

yields of about 4.25% during the years 1937–1940, the new 3% bonds offered in January 1941 were sold to the public at a price of 101 to yield only 2.95%. The 3% bonds were quoted at 101⅜ as of February 28, 1941, to yield 2.93%.

The two issues next appearing in Schedule 5-A consist of first mortgage bonds of Panhandle Eastern Pipe Line Company. The first issue shown was offered in the principal amount of $24,000,000 in 1937 and consisted of 4% bonds, due 1952, carrying an A rating. The bonds were offered at a discount of 2½ points below par in April 1937 to yield 4.23% to maturity.
90 However, the yield declined from 4.06% in 1937 to 3.60% in 1940. In March 1941 the company retired the outstanding portion of the above 4% bond issue with proceeds from the sale in January 1941 of first mortgage bonds and notes. The company offered publicly $12,000,000 of 3% bonds, due 1960, rating A, at a price of 102, which resulted in a yield of 2.87% to purchasers. At February 28, 1941, the 3% bonds were quoted above par on a 2.92% yield basis. In addition to its public offering of first mortgage 3% bonds in January 1941, the company sold privately $6,250,000 of first mortgage serial bonds, due 1946–50, carrying interest rates of 1.65, 2.30%, according to maturity, and sold to banks $5,000,000 of serial notes, due 1942–45, with interest rates from 0.75, 1.50%, according to maturity.

The bonds of Southern Natural Gas Company listed in Schedule 5-A include two issues, consisting of first mortgage 4½% bonds, due 1951, carrying a Baa rating, and Adjustment Mortgage 6% bonds, due 1960, which have been assigned Moody's B rating. In addition there is shown in Schedule 5-A the amount of outstanding funded debt of the company's subsidiaries and the portion thereof held by the general public. The 4½% bonds were offered in November 1936 at par. During 1937 and 1938 the bonds were selling below par to yield as high as 4.87%, but in 1939 and 1940 the yields based on average market price were 4.12% and 3.87%, respectively. At February 28, 1941, the 4½% bonds were quoted at one point above call price to yield 3.77%. The 6% adjustment mortgage bonds were issued in 1936 pursuant to a reorganization plan to holders of the predecessor company's 6% convertible debentures, due 1944, and to holders of allowed claims on the basis of $500 of new adjustment
91 bonds (plus 48 shares of new class A stock) for each $1,000 principal amount of old debentures and $1,030 principal amount of such claims held (Moody's Public Utilities, 1937,

p. 205). The yield on the 6% adjustment bonds declined from 7.74% in 1938 to 6.19% in 1940 and at February 28, 1941, was 5.95%.

In this connection it should be mentioned that according to Holding Company Act Release No. 2740, dated May 3, 1941, Southern Natural Gas Company has filed a declaration with the Securities and Exchange Commission regarding the proposed sale of $13,000,000 of first mortgage pipe line sinking fund 3¼% bonds, due 1956, and $4,500,000 of 2½% serial notes, due 1942-47, and, in addition, 234,868 shares of $7.50 par common stock. The release indicates that the company proposes to apply the proceeds from the above financing to the retirement of the 4½% bonds, due 1951, which were publicly offered in 1936; a small issue of 4½% bonds, due 1952, which was privately sold in 1937; the entire issue of 6% adjustment mortgage bonds; and indebtedness of $450,000 on an outstanding 4% collateral note. The balance of the proceeds is proposed to be added to general funds.

The last group of issues on Schedule 5-A consists of first mortgage 6½% bonds, due 1939, of Southern Gas Utilities, Inc. (assumed by United Gas Pipe Line Company) and a 6% first mortgage bond issue and a 6½% debenture issue of Houston Gulf Gas Company, a subsidiary of United Gas Pipe Line Company. The latter company assumed the bonds of Southern Gas Utilities, Inc., in connection with the acquisition, following its organization in 1937, of all of the field gathering lines, main pipe lines, compressor stations, and natural gasoline plants of United Gas Public Service Company and its subsidiaries, except those of Houston Gulf Gas Company. After the divorcement from United Gas Public Service Company of the above properties, the company was merged with United Gas Corporation, which is the parent of United Gas Pipe Line Company. The 6½% bonds of Southern Gas Utilities, Inc., were redeemed in September 1938 prior to maturity. The bonds and debentures of Houston Gulf Gas Company, rated Ba and B, respectively, were sold at progressively declining yields during the years 1937-1940 and the 6% bonds, due 1943, were selling in 1940 above par to yield 5.00%, while the 6½% debentures, due 1943, were also selling above par to yield 5.82%.

It is reported that the bonds and debentures of Houston Gulf Gas Company were called for redemption in October 1940, in connection with proposed refunding operations by United Gas Corporation. The Commercial and Financial Chronicle (issue

of May 10, 1941, p. 3040) reports that United Gas Corporation has filed application under the Holding Company Act regarding the proposed private sale of $75,000,000 of 3½% first mortgage and collateral trust bonds, due 1958. In connection with such financing, it is indicated that Houston Gulf Gas Company will sell $5,400,000 of first mortgage 4% bonds, due 1961, to its parent, United Gas Pipe Line Company, and use the proceeds to discharge a like amount of indebtedness evidenced by a 2½% note held by First National Bank of Boston. The proceeds from the latter note apparently had been applied by Houston Gulf Gas Company to the redemption of its 6% bonds and 6½% debentures which are listed in Schedule 5–A. It is reported that Houston Gulf Gas Company will also issue an additional $1,300,000 of first mortgage 4% bonds, due 1961, in exchange for its $1,300,000 7% income note held by United Gas Pipe Line Company.

From the foregoing comments on the data presented in
93 Schedule 5–A with respect to yields on bonds of natural gas companies and the sequence of refunding operations conducted by each of the companies listed, with the single exception of North Penn Gas Company, it is readily apparent that the declining trend of interest rates and bond yields in recent years, to which attention has previously been directed, has exerted a strong influence upon the yields demanded by investors on bonds and other debt of natural gas companies. Without important exception, interest rates and yields on presently outstanding debt of such companies, or on bonds and other debt proposed to be issued in connection with which declarations have been filed, are at lower levels than ever before witnessed in the history of natural gas companies such as those listed in Schedule 5-A.

It may be noted that the total shown in Schedule 5–A under the column "Held by Public," $99,351,523, is in agreement with the total for bonds, debentures and notes held by the public indicated in the summary at Page 8 of Schedule 5.

*Schedules 5–B and 5–C.*—These schedules show the individual holdings by institutions and affiliates, respectively, of bonds, notes and debentures of the companies included in Schedule 5.

*Schedule 5–D.*—Schedule 5–D contains substantially similar information with respect to preferred stock of the companies listed in Schedule 5 which are held by the public as was shown in Schedule 5–A for bonds and debentures and notes of such com-

panies. However, Moody's publications do not assign ratings to capital stock issues; therefore, only Poor's ratings are given.

The schedule shows that 7 of the 43 companies listed in Schedule 5 had preferred stock issues outstanding in the hand
94 of the public during all or a portion of the period since 1937.

It will be seen that the entire issue of 7% preferred stock of El Paso Natural Gas Company is held by the public. Of the total amount of $1,479,700, about $600,000 par value appears to have been issued at date of organization in 1928 and the remainder through subsequent conversion of other securities. It is indicated that the stock has been selling above par during the entire period since 1937 and that at February 28, 1941, the bid price was equal to call price of 110, resulting in a yield of 6.36%. The dividend record on this stock indicates that dividends in arrears amounting to $26.25 per share were cleared up on June 22, 1936, since which date dividends have been paid regularly.

The next issue shown in Schedule 5-D consists of $50 par 7% preferred stock of Houston Natural Gas Corporation which appears to have been issued at organization of the company in 1928. The stock was selling somewhat below par in 1937 and 1938, but the market price subsequently improved and the average price was above par in 1939 and 1940. At November 30, 1940, the date of the most recent quotation available, the bid price of 55 equalled call price and the resulting yield was 6.36%.

Next in order is an issue of $100 par 6½% preferred stock of Lone Star Gas Corporation. The aggregate par value of this stock outstanding as of December 31, 1937, was $7,975,500. Funds for retirement of the entire issue and for other purposes were obtained from the sale in August 1938 of $20,000,000 of 3½% convertible debentures due 1953, and $11,300,000 of 2¾% serial notes, due 1939–45. During 1937 and 1938, prior to its retirement, the preferred stock was selling above call price of
95 $110 per share.

Next appear two issues of preferred stock of Montana-Dakota Utilities Co. consisting of $100 par stock with dividend rates of 5% and 6%, respectively. The two issues have equal preference as to assets and dividends. Neither series enjoyed a favorable market during the years 1937–1939 the market price in each instance being considerably below par throughout that period. However, by 1940 the market prices for both series had improved substantially over the 1937 level, although quotations

were still below par. At February 28, 1941, the market price for each series was the highest recorded during the four-year period, the 5% series being quoted at 90 to yield 5.56%, and the 6% series at 98½ to yield 6.09%.

The $7 dividend prior preferred stock of North Penn Gas Company consists of a small issue for which quotations could be obtained only for the year 1937. The yield in that year based on average market price of 89 was 7.87%. This stock has preference as to assets and dividends over an issue of $7 dividend preferred stock all of which is held by affiliates.

The next group of preferred stocks listed in Schedule 5–D is comprised of three issues of Oklahoma Natural Gas Company. The first issue consists of $100 par 6% convertible prior preference stock. This stock was issued in 1936 par for par in exchange for $2,220,000 of the company's 5% notes, due 1936–41. The market price of the 6% stock was below par in 1937 and 1938, but in 1939 the stock was selling above par to yield 5.84%. In conjunction with certain refunding operations conducted in the latter part of 1939, as described in Note (d) of Schedule 5–D, the entire issue of the 6% prior preference stock was retired, and the company sold 58,000 shares of $5.50 no par convertible prior preferred stock. The new stock was offered publicly at a price of 104 to yield 5.29% to purchasers. The market price of the new stock remained above par following its issuance, resulting in yields of 5.02% in 1939 and 5.07% in 1940. At February 28, 1941, the stock was quoted at 3¾ points above call price of 110 to yield 4.84% to purchasers. The third issue listed for Oklahoma Natural Gas Company consists of $50 par $3 dividend preferred stock of which there are 91,055 shares outstanding, this stock having been issued in 1933 in exchange with holders of preferred stock of Oklahoma Natural Gas Corporation under the plan of reorganization of the latter company. From its low level of $26 per share in 1937, the market price of this stock has gradually increased and at February 28, 1941, was equal to par value of $50 per share. It should be noted that the $3 dividend preferred stock is outranked with respect to preference as to assets and cumulative dividends by the $5.50 prior preferred stock. It also appears that dividends on the $3 dividend stock did not become cumulative until after January 1, 1939, and that the initial dividend on the stock was paid on March 15, 1939.

Pacific Lighting Corporation in May 1939 offered to exchange new $5 preferred stock with holders of the Company's outstand-

ing $6 preferred stock. The $6 preferred stock had been issued over a period of years and there were outstanding 196,665 shares as of December 31, 1938. The $6 preferred stock was selling above par in 1937 and 1938 to yield 5.84% and 5.79%, respectively. In 1939 up to date of retirement the average market price had exceeded call price of $105 per share resulting in a yield of 5.63%. Holders of 161,081 shares of the com-
97 pany's $6 preferred stock accepted the offer to exchange their holdings for $5 preferred stock, and the remaining 38,919 shares of the 200,000 shares of $5 preferred stock issued, were offered publicly at $102 per share to yield 4.90%. Following the issuance of the $5 preferred stock, the market price remained above par in 1939 and 1940. At February 28, 1941, the stock was quoted at 1¾ points above call price of 105 to yield 4.68%.

The last two preferred stocks listed in Schedule 5–D are issues of Southern California Gas Company, a subsidiary of Pacific Lighting Corporation. Both issues consist of $25 par 6% preferred stock, but the issues are distinguishable by the fact that the larger issue is identified as Series A stock. The generally lower market price associated with the Series A stock may be attributable to the fact that this stock as a class is entitled in liquidation merely to par value and accrued dividends in preference to the common stock, whereas the smaller issue of 6% preferred stock as a class has equal preference with the Series A stock in liquidation but is entitled, in addition to par value and accrued dividends, to share pro rata with common stockholders in the distribution of assets remaining after payment to common stock of its par value. Based on average market value the yield on the 6% preferred stock ranged from 4.84% in 1937 to 4.29% in 1940 and the yield on the Series A preferred stock declined from 5.12% in 1937 to 4.63% in 1940. At February 28, 1941, the 6% stock was quoted at 33, or one-fourth point below the price quoted for the Series A stock, resulting in yields of 4.55% for the 6% stock and 4.51% for the Series A stock. It will be noted that neither issue of preferred stock is subject to call.

It should be pointed out with respect to the data shown
98 Schedule 5–D that the indicated yields for the four preferred stock issues for which quotations are reported as being equal to or in excess of call price cannot be considered as representing the true yields for the respective issues. It is apparent that an investor purchasing preferred stock at a price

n excess of call price would be confronted with the risk that he issuing company may exercise its option to redeem the issue t a price less than that paid for the stock. Consequently, the act that a certain issue of preferred stock is subject to redemption ends to prevent the price of the stock from rising much beyond he call price and, conversely, tends to maintain the yield on uch stock at an artificially high level. The four preferred tocks currently quoted at prices at or above call price are the % issue of El Paso Natural Gas Company, the 7% issue of Houston Natural Gas Corporation, the $5.50 dividend prior preferred issue of Oklahoma Natural Gas Company, and the $5 ividend preferred issue of Pacific Lighting Corporation.

It will be noted that the amount of $63,128,710 shown as the otal of the column "Total Outstanding and Held by Public" in Schedule 5–D is in agreement with the amount designated as otal preferred stock holdings by the public in the summary at age 8 of Schedule 5.

*Schedule 5–E.*—It is believed that Schedule 5–E, which shows dividual holdings by affiliated interests of preferred stock of he companies listed in Schedule 5, requires no comment.

*Schedules 5–F1 and 5–F2.*—Schedule 5–F1 contains certain information relative to the common stock issues of the 13 companies sted in Schedule 5 which have common stock outstanding in the hands of the public. The schedule shows for each issue the name of the issuing company, the number of shares and book amount of common stock outstanding, the portion ereof held by the public, the par value, if any, and Poor's rating. ext are shown for the years 1937 to 1940, inclusive, the annual rnings per share, the averages of annual high and low market ices, and the earnings-price ratios, i. e., the per cent of earnings r share to market price, of the respective common stocks. nally, there is shown for each issue an earnings-price ratio sed on market price at February 28, 1941, and on earnings for latest year for which reported.

Schedule 5–F2 reflects, for each of the companies listed in edule 5–F1, annual operating revenues, together with annual nings and dividends per share of common stock, during the year period 1926–1940, insofar as such data are available in blications generally accepted as reliable sources of information. ge 1 of Schedule 5–F2 contains the data on operating revenues, nings and dividends by years set forth in columnar form under

appropriate captions. It will be noted that the date of incorporation appears immediately below the column headings applicable to the respective companies. A symbol immediately following the name of a company is keyed to an explanatory notation appearing on Page 2 of Schedule 5–F2. In certain instances it has been necessary, in computing earnings and dividends per share, to revise the reported figures retroactively to give effect to stock split-ups and stock dividends. Accordingly, for purpose of comparison, all data on earnings and dividends per share for the years preceding the year in which such changes occurred are based on the present common stock.

The earnings-price ratios of the respective common stock issues for the periods and on the basis indicated in Schedule 5–F1 are set forth in the following tabulation:

| Company | Common stock earnings-price ratios | | | | |
|---|---|---|---|---|---|
| | 1937 | 1938 | 1939 | 1940 | 2-28-41 |
| | *Percent* | *Percent* | *Percent* | *Percent* | *Percent* |
| Consolidated Gas Utilities Corp | 3.78 | | 11.70 | 17.75 | 17.14 |
| El Paso Natural Gas Co | 13.79 | 14.08 | 10.60 | 9.69 | 12.19 |
| Houston Natural Gas Corp | 11.10 | 14.35 | 18.77 | 25.40 | 20.64 |
| Interstate Natural Gas Co., Inc | 9.90 | 10.02 | 8.88 | 9.08 | 9.17 |
| Lone Star Gas Corp | 11.69 | 10.27 | 11.24 | 12.73 | 12.00 |
| Memphis Natural Gas Co | 16.63 | 13.96 | 15.74 | 15.75 | 14.90 |
| Montana-Dakota Utilities Co | 5.91 | 10.00 | 8.64 | 11.48 | 7.91 |
| Mountain Fuel Supply Co | 3.94 | 6.99 | 9.47 | 8.82 | 8.35 |
| National Fuel Gas Co | 6.10 | 6.36 | 7.52 | 9.69 | 9.61 |
| Oklahoma Natural Gas Co | 19.27 | 16.19 | 12.17 | 21.20 | 19.73 |
| Pacific Lighting Corp | 9.27 | 10.90 | 7.84 | 7.54 | 8.58 |
| Panhandle Eastern Pipe Line Co | | | 9.61 | 11.74 | 11.68 |
| Southern Natural Gas Co | | | 18.14 | 19.51 | 24.38 |

Comments pertaining to the above earnings-price ratios and to data appearing in Schedule 5–F2 relative to each of the companies listed are presented below in the order of their appearance.

*Consolidated Gas Utilities Corporation.*—The earnings-price ratio of this company's common stock was 17.14% as of February 28, 1941, based on market price of $1.75 per share and 1940 earnings of $0.30 per share. The ratio was somewhat higher in 1940, at 17.75%, which compares with the ratios of 11.70% in 1939 and 3.78% in 1937. Operations in 1938 resulted in a net loss of $0.47 per share; therefore no earnings-price ratio appears for that year. From information contained in Schedule 5–F2 it appears that the

ıny was incorporated in 1935 to take over the business of edecessor pursuant to a plan of reorganization. The com- therefore has an operating history of only five years, in two ıich operations resulted in a net loss. No dividends have been paid on the common stock since its issuance.

*El Paso Natural Gas Company.*—The common stock of this company had an earnings-price ratio of 9.69% in 1940, was somewhat lower than the ratio of 10.60% in 1939 but lerably lower than the ratios of 13.79% and 14.08% in 1937 )38, respectively. At February 28, 1941, the ratio was 12.19%, well above the ratio of 9.69% for 1940. From inspection data shown in Schedule 5–F2, it will be seen that earnings hare increased from $3.00 to $3.75 between 1937 and 1939, eclined to $3.29 in 1940, as contrasted with increased earnings 10 reflected for a majority of the companies represented in lule 5–F2. The company's operating revenues have increased $1,197,795 in 1930 to $6,380,311 in 1940. More than half of crease in revenues, however, has occurred subsequent to 1936. nitial dividend on the common stock was paid in 1936, in year the company disbursed $26.25 per 7% preferred share, ng up all arrears in preferred dividends from September 1, through June 1, 1936, since which data preferred dividends been paid regularly. Beginning in 1937 the company has annual dividends amounting to $2.00 per share on its com- tock.

*ston Natural Gas Corporation.*—The earnings-price ratio s company's common stock increased from 11.10% in 1937 0% in 1940 and at February 28, 1941, was 20.64%. The pres- mpany is a Texas corporation formed in 1940 which acquired operties and assets of the Delaware corporation of the same including the assets of the latter's subsidiaries. The Dela- corporation had been organized in November 1928 as a hold- mpany. Schedule 5–F2 discloses that consolidated operating revenues increased from $1,578,218 in 1929 to $3,128,613 in 1940, half of the increase having occurred subsequent to 1936. Earnings per common share have fluctuated con- bly. From $0.63 per share in 1935, earnings increased to n 1936 and to $1.72 in 1937, but declined to $1.22 in 1938. after earnings increased to $1.83 per share in 1939 and to per share in 1940. The initial dividend on common stock aid in 1936. From $0.50 per share in 1936 (erroneously as $0.75 in Schedule 5–F2) dividend payments on common

stock were increased to $1.25 in 1937, reduced to $0.80 in 1938 and to $0.40 in 1939, and increased to $1.20 in 1940. In 1937 the predecessor Delaware corporation distributed to common stockholders a stock dividend of 50% payable in common stock. Earnings and dividends per share for the years 1929–1936 prior to the stock dividend are shown in Schedule 5–F2 on the basis of the present common stock.

*Interstate Natural Gas Co., Inc.*—The earnings-price ratio of this company's common stock has fluctuated within a narrow range around 9.00% during the years 1937–1940 and was 9.17% as of February 28, 1941, based on market price of $23 and earnings for the year 1939 of $2.11 per share. The company was incorporated in 1926. Published figures show that its operating revenues increased from $3,101,950 in 1933 to $5,868,450 in 1939, the latest year for which information is available. The initial dividend on the company's common stock was paid in 1930 and the company also paid common dividends in 1931, the amount paid in each year being $0.25 per share. No common dividends were paid during the years 1932–1935, but in 1936 the company paid dividends of $1.75 per share. Dividend payments were increased to $2.60 per share in 1937, reduced to $1.75 in 1938, and in the following two years amounted to $2.00 per share. Earnings increased
103 from $0.35 per share in 1933 to $2.50 in 1937, but declined to $2.13 per share in 1938 and to $2.11 in 1939.

*Lone Star Gas Corporation*.—This company's common stock earnings-price ratio has fluctuated between limits of 10.27% and 12.73% during the four-year period 1937–1940. At February 28, 1941, the ratio was 12.00% as compared with 12.73% in 1940. Earnings during the four-year period have likewise fluctuated, declining from $1.14 per share in 1937 to $0.88 in 1938, and increasing to $0.98 in 1939 and to $1.17 in 1940. The company commenced operations in 1926 when it was organized to acquire control of Lone Star Gas Company. Operating revenues have increased from $10,983,055 in 1926 to $22,378,903 in 1940. Approximately forty percent of the indicated increase in revenues has occurred since 1935. Earnings and dividends per share for years prior to 1932 as shown in Schedule 5–F2 have been computed on the basis of giving effect to the 1929 stock split-up and the 1931 stock dividend described on Page 2 of Schedule 5–F2. Common stock earnings during the years 1926–1930 were generally higher than those since recorded and ranged from $1.13 to $1.58 per share in that period. During the depression years

ings declined to $0.53 per share but increased to $1.02 per
e by 1936 and, as stated above, were $1.17 per share in 1940.
mon dividends have been paid regularly since 1926 but the
unts paid fluctuated considerably during the ten-year period
ng in 1935. Dividends subsequently paid amounted to $0.60
share in the three years 1936–1938 and to $0.70 per share in
and 1940.

*emphis Natural Gas Company*:—The earnings-price ratio
reflected for this company's common stock during the years
1937–1940 has ranged from 13.96% to 16.63%, and was
14.90% at February 28, 1941. Earnings per share during
ears 1938–1940 did not vary appreciably but were at a lower
than in 1937 when earnings of $0.78 per share were the
st reported since inception of the company. The company
enced operations in 1928 and in 1931 reported earnings of
per share. During the depression years earnings fell to a
evel, being reported at amounts ranging from $0.36 in 1932
.22 in 1935. The company paid the initial dividend on its
on stock in 1930 and continued payments in the two suc-
ng years. No dividend payment was made in 1933, but
ends were resumed in 1934 and have been paid regularly
Annual dividend payments amounted to $0.10 per share
34 and 1935, $0.50 in 1936 and $0.60 in 1937. The amount
was reduced to $0.45 in 1938, but was increased to $0.50 in
nd to $0.55 in 1940.

*ntana-Dakota Utilities Co.*—The common stock earnings-
ratio of this company was 7.91% as of February 28, 1941,
mpared with percentages ranging from 5.91% in 1937 to
% in 1940. Earnings in 1940 showed a substantial improve-
over those in 1939, while the latter, in turn, were lower
1937 and 1938 earnings. The company has been in existence
1924, but its name was changed from Minnesota Northern
r Company to the present title in 1935, prior to which time
ompany was primarily a holding company. Published
gs figures on a comparable basis do not extend beyond 1933.
ver, the company's common dividend record for prior years
es that an initial dividend was paid in 1926, and that
nds were paid in increasingly larger amounts (after giving
effect to an 8 for 1 stock split-up in 1928 and a 6 for 1 split-
up in 1930) through 1931. No dividends were paid on
common stock after January 1, 1932, until December 1937
a dividend of $0.10 per share was paid. Dividends on pre-

ferred stock were paid regularly through January 1, 1932, but none were paid thereafter through 1936 when arrearages were cleared up under a preferred stock readjustment settlement whereby 12,889 shares of 5% preferred stock were issued in full satisfaction of accrued dividends through January 1, 1937. Since the latter date preferred dividends have been paid regularly. Operating revenues have increased from $3,357,676 in 1933 to $4,984,994 in 1940. In 1933 and 1934 operations resulted in substantial net losses. Earnings thereafter increased from $0.08 per share in 1935 to $0.65 in 1937, declined to $0.60 in 1938 and to $0.54 in 1939, but increased to $0.89 in 1940. Following the payment of $0.10 on the common stock in 1937, the company paid dividends of $0.32 per share in 1938, but lowered dividends to $0.24 per share in 1939 and 1940.

*Mountain Fuel Supply Company.*—The current earnings-price ratio reflected for the common stock of this company, based on market price at February 28, 1941, is 8.35%. This ratio compares with percentages of 8.82% in 1940, 9.47% in 1939, 6.99% in 1938, and 3.94% in 1937. It will be noted that earnings have shown gradual improvement since 1937. As disclosed by data in Schedule 5–F2, however, 1937 earnings were lower than those in 1936. Prior to 1936 earnings were at relatively lower levels and operations resulted in net losses in two of the six years represented. The company was organized in 1935 as successor by consolidation and merger to Western Public Service Corporation (incorporated in 1928) and its subsidiaries. Operating revenues have increased from $1,378,881 in 1930 to $3,388,133 in 1940, approximately one-half of the increase having occurred subsequent to 1936. Dividends were first paid in 1933 in the amount of $0.20 per share. The amount paid was reduced to $0.10 in 1934 and 1935. Dividend payments amounted to $0.25 in each of the three years 1936–1938, but were increased to $0.35 in 1939 and to $0.40 in 1940.

*National Fuel Gas Company.*—This company's common stock earnings-price ratio ranged from 6.10% in 1937 to 9.69% in 1940 and was 9.43% as of February 28, 1941. During the four-year period the company's earnings were lowest in 1938, at $0.83 per share, and highest in 1940, at $1.12 per share. Inspection of Schedule 5–F2 discloses that operating revenues during the years 1926–1930 were at a higher level then any since reported. For example, operating revenues amount to $19,418,690 in 1926, but were reported at $15,750,559 in 1935, and ranged from $14,713,09

1936 to $13,189,292 in 1938, and by 1940 had risen to $15,591,937, hich amount was still below the total recorded in 1935. The mpany's earnings record reflects a similar situation, with earn-gs averagng approximately $1.50 per share in the years 26–1930, $1.15 in the years 1931–1935, and $1.00 in the years 36–1940. The company's dividend record has been more con-tent, dividends of $1.00 per share having been paid in each ar of the 15-year period, with the exception of the years 1926 d 1935, when dividends of $0.80 and $1.35 per share, respec-ely, were paid. The company, which was incorporated in 22, made its initial dividend payment in 1909 and since that ne has paid dividends annually. In addition to paying cash vidends, the company declared a 100% stock dividend in 1922. The common stock was changed from $100 par to no par in 1927, 10 shares of no par stock being issued in exchange for each share of $100 par stock held. Earnings and dividends r the years 1926 and 1927 have been computed on the basis the present common stock.

*Oklahoma Natural Gas Company.*—The earnings-price ratio this company's common stock has varied considerably during e years 1937–1940. From 19.27% in 1937, the ratio declined to 19% in 1938 and to 12.17% in 1939, but increased to 21.20% 1940. At February 28, 1941, the ratio, based on earnings for e twelve months ended December 31, 1940, was 19.73%. Ratios the years 1937 to 1940, inclusive, are computed on the basis fiscal-year earnings. As stated in Note (g) of Schedule 5–F1, company's fiscal year was changed from the year ended No-mber 30 to the year ended August 31, effective in 1939. It will noted that during the four-year period 1937–1940, earnings common share declined from $2.06 in 1937 to $1.70 in 1938 l amounted to $1.75 in 1939, but increased substantially in 0, the earnings for the fiscal year ended August 31, 1940, being orted at $3.71 per share. Earnings reported for the twelve nths ended December 31, 1940, amounted to $4.02 per share. is indicated in Note (i) of Schedule 5–F2 that the company organized in 1933 as the successor through reorganization to business and property of Oklahoma Natural Gas Corporation. ce 1933 operating revenues have increased from $6,575,598 9,421,698, the increase in 1940 alone amounting to $1,200,000. mmencing in 1934 at $0.07 per share, earnings increased to 8 in 1935, and to $0.95 in 1936, since which year, as above icated, earnings have risen to a substantially higher level. The

company paid common dividends for the first time in 1939.
108 In that year the amount paid was $1.00 per share, which was increased to $1.10 in 1940.

*Pacific Lighting Corporation.*—Following 1938 when the earnings-price ratio of this company's common stock, at 10.90%, reflected an increase over the previous year's ratio of 9.27%, the ratio declined to 7.84% in 1939 and to 7.54% in 1940. In 1941 the current ratio, based on market price of the common stock at February 28, 1941, was 8.58%. It will be noted that earnings, which amounted to $4.10 per share in 1937, increased to $4.18 per share in 1938, but declined to $3.60 in 1939 and had fallen to $3.13 in 1940. From inspection of Schedule 5-F2 it will be seen that annual operating revenues were at a level of approximately $45,000,000 during the three years 1938–1940. Operating revenues in the peak year, 1936, amounted to $51,000,000. However, it should be noted that 1936 was the last full year of operation of the Los Angeles Gas & Electric Corporation, a subsidiary whose electric properties, which produced operating revenues of approximately $9,000,000 in 1936, were sold to the City of Los Angeles in May 1937. In the five years 1926–1930 earnings averaged $3.71 per share; in the five years 1931–1935, $3.39 per share; and in the last five years of the fifteen-year perior 1926–1940 average earnings rose slightly above the 1926–1930 level to $3.78 per share. The company, which was incorporated in May 1907 as the successor to Pacific Lighting Company (incorporated in 1886), has maintained a continuous record of common dividend payments since 1909. In addition to cash dividends on its common stock, the company declared stock dividends of 10% in December 1922 and 80% in December 1924 payable in common stock. Since 1928 the company has paid annual dividends of $3.00 per share on its common stock, except in 1935 and 1936, when amounts of $2.40 and
109 $2.85, respectively, were paid, and in 1937, when the amount paid was $3.50 per share. In 1927 the common stock was changed from $100 par to no par, and 10 no par shares were exchanged for each $100 par share held. Earnings and dividends per share for the year 1926 and 1927 have therefore been computed on the basis of the present common stock.

*Panhandle Eastern Pipe Line Company.*—None of the common stock of this company was held by the public prior to September 1939. Accordingly market quotations have been available only since that time. Based on average market price for the remainder

1939 the earnings-price ratio for that year was 9.61%. This o increased to 11.74% in 1940 and was 11.65% as of February 1941. Reference to Schedule 5–F2 discloses that the company incorporated in 1929 as Interstate Pipe Line Company, the sent title having been adopted in 1930. Operating revenues cted a moderate increase from $3,048,518 in 1934 to $3,611,865 1935, but increased by $2,400,000 in 1936. This increase is ibutable to the fact that the company on July 9, 1936, com- ced delivery of natural gas to Detroit, Michigan, under a con- t with Michigan Consolidated Gas Company (formerly De- t City Gas Company). Thereafter operating revenues con- ed to increase and in 1940 aggregated $13,535,453, which repre- s an increase since 1937 of approximately $4,000,000. Schedule 2 discloses that in 1934 and 1935, prior to commencement of ural gas deliveries to Detroit, the company's operations re- ed in substantial net losses. However, in 1936 the company orted net earnings of $1.44 per share, and earnings increased $3.57 per share in 1937. A considerable decline in earnings occurred in 1938, in which years earnings amounted to $2.84 per share. In 1939 earnings reported at $3.82 per share exceeded the 1937 amount, and in 1940 earnings increased 3.99 per share. The initial dividend on the company's com- stock was paid in 1937. Following the payment of $0.50 share in that year, common dividends were increased to $2.25 938, reduced to $1.50 in 1939 and increased to $3.00 in 1940.

will be seen from Note (k) of Schedule 5–F2 that Panhandle ern Pipe Line Company has outstanding two issues of $6 lend preferred stock. One issue consists of 10,000 shares of s B nonparticipating preferred stock. The second issue is esented by 100,000 shares of Class A participating preferred . By reference to Schedule 5–E it will be found that both rred stock issues are held by Columbia Oil & Gasoline Cor- ion, which company and Missouri-Kansas Pipe Line Com- together own 92.13% of the outstanding common stock of andle Eastern Pipe Line Company, as shown on Page 5 of dule 5–G. Dividends on both classes of preferred stock be- cumulative after January 1, 1936. Dividends thereon paid 37 included $6.00 per share in full payment of arrears for With respect to the Class A participating preferred stock provided that after common stock has received $1.50 per and Class A preferred stock $6.00 per share in dividends, rs of Class A stock are entitled to participate with holders

of common stock in any further distribution of earnings in the proportion of 25% to Class A preferred stock as a class and 75% to common stock as a class. The earnings per common share reflected in Schedules 5–F1 and 5–F2 are computed after giving effect to the participating feature of the Class A preferred stock.

It should be noted in this connection that a portion of the
111 common dividends paid by Panhandle Eastern Pipe Line Company in 1938 and 1940 constituted participating dividends under the above provision. For example, in those years, after dividend payments of $1.50 per share to common stock and $6.00 per share to Class A preferred stock, participating dividends of $0.75 in 1938 and $1.50 in 1939 were distributed on the common stock. The aggregate amounts of such participating common dividends were $546,489 in 1938 and $1,211,051 in 1940; consequently Class A preferred stock received participating dividends aggregating $182,163 in 1938 and $403,683 in 1940, equal to $1.82 and $4.04 per share, respectively, on the 100,000 shares of Class A preferred stock outstanding. The years 1938 and 1940 are the only years in which the company has paid participating dividends.

*Southern Natural Gas Company.*—The present $7.50 par common stock of this company has been outstanding only since May 1939 when it was issued in exchange with holders of the company's formerly outstanding Class A and B common stocks. The exchange was made on the basis of one share of new stock for each share of Class A stock held and one-half share of new stock for each share of Class B stock held. Based on average market price during the period in 1939 following its issuance, the earnings-price ratio of the new common stock was 18.14% in that year, increased to 19.51% in 1940, and was 24.38% as of February 28, 1941. It will be noted that earnings amounted to $2.01 per share in 1937 and declined to $1.49 in 1938, but increased to $2.55 in 1939 and to $3.17 in 1940. The company paid its initial dividend in 1936 when a dividend payment of $0.80 per share on the former Class A stock was made. In 1937 a dividend of $0.25 was paid on the former Class B stock. No
112 further dividends were paid on the Class B stock, but subsequent dividend payments on the Class A stock amounted to $1.20 in 1937 and $0.50 in 1938. Dividends amounting to $1.25 per share were paid in 1939 and 1940 on the new $7.50 par common stock. As indicated in Note (1) of Schedule 5–F2, the company was organized in 1935 to acquire the

operties of its predecessor, Southern Natural Gas Corporation ncorporated in 1928), pursuant to a plan or reorganization.

The foregoing historical analysis of operating revenues, earnings, and dividend payments of individual companies discloses following facts with respect to the 13 companies represented Schedules 5–F1 and 5–F2:

1. One company has paid no dividends on common stock since inception;

2. Three companies did not commence payment of common vidends until 1936; one until 1937; and one until 1939;

3. Three companies paid lower dividends in 1939 than in 38;

4. Five companies ceased the payment of dividends altogether ring the depression years or made substantially reduced vidend payments;

5. Preferred dividends of three companies were in arrears ring the depression years;

6. Three companies were organized to take over the properties predecessor companies which had been placed in receivership;

7. Common stock earnings of three companies were lower in latest year for which reported than in the preceding year;

8. Common stock earnings of two companies, which have been existence since 1926, reflect a decline in average earnings for five years 1936–1940 as compared with the five years 26–1930;

9. Operating revenues of two companies, which have been in stence since 1926, were lower in 1940 than in 1930.

In the following tabulation the above numbered paragraphs are keyed to the respective companies to which reference is made therein by the symbol "X" appearing ow the paragraph number:

| Company | Paragraph number | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| lidated Gas Utilities Corp | X | | | | | X | | | |

| ndle Eastern Pipe Line Co | | X (1937) | X | | X | | | | |
| ern Natural Gas Co | | X (1936) | | | | X | | | |

The above tabulation illustrates some of the factors which may influence investor appraisal of risk in connection with the purchase of common stock. The fluctuations noted in annual earnings-price ratios of the common stocks listed in Schedule 5-F during the period since 1937 may have been occasioned by one or more of these or other factors.

The foregoing comments indicate that caution must be exercised in appraising the significance of the earnings-price ratios exhibited for the above group of common stocks of natural gas companies. It also appears that the propriety of employing such earnings-price ratios in connection with the problem of a fair rate of return for Hope Natural Gas Company would be doubtful if consideration were not given to comparative analyses of operating revenues, earnings, and dividends, as well as to other factors indicative of the degree of risk confronting the enterprise.

*Schedule 5-G.*—This schedule contains a list of the individual holdings by affiliates of common stock of the natural gas companies listed in Schedule 5. None of such common stock is held by institutions, except that as will be noted by reference to Page 1 of Schedule 5, an amount of $451,697 of the common stock of Godfrey L. Cabot, Inc., was held by three educational institutions.

114

*Schedule 6.*—Schedule 6 contains a compilation of bond issues sold by the natural gas companies listed in Schedule 5 during the period from January 1, 1935, to March 31, 1941, inclusive. The issues are grouped according to Moody's ratings, and for each issue there appear the name of the issuing company, the approximate offering date, a description of the issue, principal amount of the offering, net price and cost to company, and price and yield to public. In addition, the schedule shows the distribution of holdings of issues presently outstanding, i. e., whether held by the general public, or by institutional investors.

Under "Net Price to Company" are shown the net proceeds to the company per $100 of principal amount after underwriters' commissions and other expenses and in the adjoining column a percentage representing the annual cost of the funds borrowed calculated to maturity. Under "Price to Public" are shown the selling price to the public and in the adjoining column a percentage representing the annual yield to purchasers calculated to maturity.

All but two of the issues shown in Schedule 6 have been referred to in the preceding comments pertaining to the data con-

ained in Schedule 5–A. The issue of Mississippi River Fuel Corporation not previously described, which is the first issue listed in the lower section of Schedule 6 covering bonds privately sold, consists of $10,000,000 of first mort-age 4% bonds, due 1952. These bonds were sold privately in ebruary 1937 at an assumed price of par, the proceeds having een used for redemption of the company's previously outstanding irst mortgage 6% bonds, due 1944. As of December 31, 1940, 7,665,000 principal amount of this issue was outstanding, the ntire amount being held by institutions.

The second issue not previously described consists of $16,000,000 f first mortgage 3¼% bonds, due 1954, of Northern Natural as Company, which were sold privately in August 1939 at par o the group of insurance companies identified on Page 5 of chedule 5–B. The proceeds from the sale of the 3¼% bonds ere applied to the retirement as of August 1, 1939, of the com-any's outstanding first mortgage 4¾% bonds, due 1947, Series A ($11,120,000); first mortgage 4¼% bonds, due 1947, Series B $1,454,000), and 4½% debentures, due 1948 ($2,930,000). The ¾% Series A bonds and the 4¼% Series B bonds, both due 947, in the principal amounts of $16,000,000 and $2,000,000, re-pectively, had been sold privately in July 1935 to four insurance ompanies, the proceeds being used to retire bank loans and to rovide additional capital for construction. The 4½% deben-ures, due 1948, in the principal amount of $3,000,000, had been old privately in July 1938, it being reported that the proceeds ere used for general corporate purposes.

By inspection of Schedule 6 it will be seen that a considerable roportion of the bonds sold by the companies listed in Schedule during the period shown has been purchased by institutions, which affords an indication of the investment quality of the bonds of the natural gas companies represented. In addi-tion, it will be observed that the ratings assigned to a ajority of the bond issues of such companies which have been ublicly offered fall within the Baa to Aa groups. However, it of interest to note that in numerous instances the yield at which e issues shown in Schedule 6 have been sold is lower than oody's public utility bond yield average in the month of sale r the rating group in which the issue falls, as indicated below:

| Rating | Company | Offering date | Issue | Yield to public | Moody yield |
|---|---|---|---|---|---|
| | | | | *Percent* | |
| A | Lone Star Gas Corp | Aug. 1938 | Deb., 3½%, 1953 | 3.33 | 3.8 |
| A | Panhandle East. P. L. Co | Jan. 1941 | 1st Mtg., 3%, 1960 | 2.87 | 3.1 |
| Baa | Oklahoma Nat. Gas Co | June 1936 | 1st Mtg., 4½%, 1951 | 4.64 | 4.2 |
| Baa | Southern Nat. Gas Co | Nov. 1936 | 1st Mtg., 4½%, 1951 | 4.50 | 4.2 |
| Baa | Montana-Dakota U. Co | May 1939 | 1st Mgt., 4½%, 1954 | 4.41 | 4.3 |
| Baa | Oklahoma Nat. Gas Co | Aug. 1939 | 1st Mtg., 3¾%, 1955 | 3.46 | 4.0 |
| Baa | Montana-Dakota U. Co | Jan. 1941 | 1st Mtg., 3½%, 1961 | 3.26 | 3.8 |

[1] Moody's public-utility bond yield average in month of offering, per Schedule 4 of Volume II of this exhibit.

From Schedule 6 it will be observed that a characteristic feature of natural gas company bond issues, arising from the fact that the business of such companies is based on exploitation of a wasting resource, is their relatively short life to maturity. As will be noted by comparison of offering dates with maturities, the life of the issues generally does not exceed 15 years, whereas for electric utility bond issues the life is generally 25 or 30 years. For example, aside from the five debenture issues listed in Schedule 6, for which the period to maturity is 10 years in all but one instance, 16 of the mortgage bond issues shown have a life of 15 or 16 years. However, three issues have a life of 30 years, another of 20 years, and another of 19 years. The remaining five issues consist of mortgage bonds having short-term serial maturities.

1-17

Finally, it will be noted that in the majority of instances the bonds listed in Schedule 6 are indicated as having been issued under indentures containing provisions relative to sinking fund requirements with a view toward the gradual retirement of the bonds over the life of the issue. The provision for serial maturities in respect of the five issues mentioned above accomplishes the same purpose as a provision for redemption through sinking fund operations.

*Schedule 7.*—Schedule 7 is presented for the purpose of disclosing certain details with respect to the issuance, terms, and purpose of issuance of outstanding note issues of the natural gas companies listed in Schedule 5 which were held by institutions. The schedule shows for each note issue, in columnar form and under appropriate captions, the name of the issuing company, the approximate date of issuance, a description of the issue including date of maturity, the principal amount of the issue, the purpose

ssuance, the interest rate, the identity of the lending institu-
s and the principal amount outstanding.

he purpose of the note issues which are indicated in the column
rpose of Issuance" as having been issued for refunding pur-
s, and in connection with which there is a reference to Schedule
as been described in the preceding comments pertaining to
dule 5–A.

will be noted that the total amount of all outstanding notes
n in the last column of the schedule is an agreement with the
amount indicated in the summary on Page 8 of Schedule 5
as representing notes held by institutions.

It is of interest to note that in many instances the com-
es have refunded previously outstanding mortgage debt
debentures carrying higher rates of interest by means of
t-term bank loans carrying low interest rates, and that in
al instances the loans have been made by groups of partici-
g banks and insurance companies. In the majority of in-
es the notes have been issued for refunding purposes. How-
in the case of Northern Natural Gas Company, a loan of
0,000 was obtained for new capital purposes. The loan was
enced by unsecured 2⅛% promissory notes, due 1940–46,
d to the Chase National Bank of New York in August 1939.
as reported that the proceeds from the loan were to be used
llows: $3,600,000 for construction of a 240-mile pipe line
Sioux City, Iowa, to Minneapolis; $1,200,000 for compressor
n property, lateral pipe lines, distribution system properties
bsidiaries and development costs, all directly incidental to
ipe line; and $1,200,000 to defray cost of additions and bet-
nts to the company's existing property, including distribu-
ystems of subsidiaries, etc.

*hedule 8.*—This schedule presents data on preferred stock
s of the natural gas companies listed in Schedule 5 which
sold in the period 1935–1941. The issues represented include
of Oklahoma Natural Gas Company and Pacific Lighting
ration and have been described in the preceding comments
ining to Schedule 5–D.

*edule 9.*—In this schedule are presented certain details with
t to offerings of common stock either to stockholders or to
the public by the natural gas companies listed in Schedule
5 during the period since 1935. Only three such offerings
have been made, the issuing companies including El Paso

Natural Gas Company, Panhandle Eastern Pipe Line Company, and Southern Natural Gas Company.

There appear for each of the issues listed in Schedule 9 the name of the issuing company and description of the issue, the offering date, the number of shares offered, the amount of the offering, the price to underwriters, the offering price, the earnings per share for the most recent twelve-months' period reported on prior to the offering date, and the ratio of the earnings for such period to the offering price.

The first issue listed in Schedule 9 consists of 60,000 shares of $3 par common stock of El Paso Natural Gas Company which were offered to the public in September 1936. As indicated in Note (a) of Schedule 9 the offering did not represent new financing by the company and the proceeds were not received by the company inasmuch as the shares constituted a portion of the company's outstanding common stock held by Engineers Public Service Company. The shares were sold to underwriters by the trustee for the latter company at a price of $19 per share. The underwriters offered the shares to the public at a price of $20 per share. On the basis of pro forma earnings of $2.21 per common share for the twelve months ended June 30, 1936, the earnings-offering price ratio was 11.05%.

The next issue shown in Schedule 9 is one consisting of 80,000 shares of no par common stock of Panhandle Eastern Pipe Line Company. A distribution of rights to subscribe to these shares was made in September 1939 to stockholders of Missouri-Kansas Pipe Line Company (holder of 42.05% of the presently outstanding common stock of Panhandle Eastern Pipe Line
120 Company) pursuant to a plan approved by the Court of Chancery for New Castle County, Delaware. The subscription warrants, which expired on October 27, 1939, entitled the holders thereof to purchase the stock at the subscription price of $25 per share. Holders of such rights acquired 78,715 shares, leaving 1,285 shares unsubscribed. It is reported that the unsubscribed shares were the subject of litigation as the result of an action instituted in October 1939 against Panhandle Eastern Pipe Line Company and others by Missouri-Kansas Pipe Line Company and Lucille I. Dammann. Based on earnings of $3.39 per share reported for the twelve months ended March 31, 1939, computed after giving effect to the participating feature of the company's Class A preferred stock, the earnings-offering price ratio of the common stock was 13.56%.

The last issue shown in Schedule 9 consists of 484,379 shares of .50 par common stock of Southern Natural Gas Company hich were offered for subscription by stockholders in January 41 in the ratio of 7/10 of one share of each share held. Of the ıares offered, Federal Water Service Corporation, as the holder 52.31% of the company's stock, purchased 253,372 shares, and her holders of subscription warrants purchased 227,782 shares, sulting in a total of 481,154 shares subscribed and 3,225 shares ısubscribed. The subscription price was fixed at $10 per share. n the basis of such price and earnings of $2.89 per share for the elve months ended August 31, 1940, the earnings-offering ice ratio was 28.90%. It was reported that $600,000 of the oceeds from the sale of common stock would be used to retire equal amount of 2½% notes issued November 22, 1940, and that the company contemplated employing a substantial portion of the remaining funds for development of gas supplies, for construction of pipe lines to transport gas oduced, for increasing the delivery capacity of its present stem and for extensions to serve other markets.

*ndard Oil Company (New Jersey)—*

*Natural Gas Interests and Long-Term Financing.*

*Chart 4.*—The purpose of this chart is to show the identity of companies in the natural gas industry which are affiliated with ndard Oil Company (New Jersey). The chart discloses that pe Natural Gas Company is a wholly owned subsidiary of Stand- Oil Company (New Jersey), and that other wholly owned ural gas subsidiaries of the latter company include The East o Gas Company, The Peoples Natural Gas Company, Hope struction & Refining Company, Hope Producing Company, and River Gas Company. It will also be seen that Standard Oil pany (New Jersey) holds controlling interests of 81.70% in oming United Gas Corporation and 53.96% in Interstate Nat- Gas Co., Inc. Lycoming United Gas Corporation, in turn, is parent of two wholly-owned natural gas subsidiaries, namely; York State Natural Gas Corporation and Keuka Construc- Corporation. In addition to the above interests, Standard Company (New Jersey) holds substantial minority interests in rado Interstate Gas Company (42.50%), Mississippi River Corporation (22.39%), and Natural Gas Pipeline Company merica (14.28%).

Domestic Coke Corporation, a nonnatural gas subsidiary of Standard Oil Company (New Jersey), is shown on the chart inasmuch as Hope Natural Gas Company, in its financial and statistical report to the Federal Power Commission for 1939
122 (F. P. C. Form No. 133), reported the purchase of 1,376,357 M C. F. of manufactured gas from that company. Gas Companies, Inc., whose stock is owned in equal percentages by Hope Natural Gas Company, The East Ohio Gas Company, and The Peoples Natural Gas Company, is included for the reason that its function is that of a service organization for the natural gas subsidiaries of Standard Oil Company (New Jersey).

*Schedule 10.*—This schedule was prepared for the purpose of presenting certain details of the physical characteristics, location of properties and volume of natural gas transactions of the natural gas companies which are controlled by Standard Oil Company (New Jersey) or in which that company holds a substantial minority interest. The companies are segregated into four groups, each group comprising a different system, except that group IV includes the natural gas companies in which Standard Oil Company (New Jersey) holds a minority interest.

The information presented for each system consists of a general description of the system, the names of the companies included therein, the percent of voting power of each company directly held by Standard Oil Company (New Jersey), and statistical data pertaining to the individual companies. Such data include miles of pipe line operated, classified according to function (i. e., production, transmission, or distribution); number and location of gas wells; volume of natural gas produced, purchased and transported; and sales of natural gas to other gas utilities at wholesale, to industrial main-line customers, and to other domestic, commercial, and industrial customers at retail.

It should be mentioned that the data on pipe-line mileage and gas wells presented in Schedule 10 are given as of July 1,
123 1938, and the statistics on volume of gas transactions are given for the twelve months ended June 30, 1938. However, it is believed that the information presented will be useful for the purpose of indicating in a general way the importance of the natural gas systems of Standard Oil Company (New Jersey) from a national standpoint.

By inspection of Schedule 10 it will be seen that fourteen companies are listed therein. However, two of the companies have been merged with other companies in the group since 1938. A-

cated in the schedule, the two companies referred to are Re- e Gas Company and Columbia Natural Gas Company. It will be seen that Lycoming United Gas Corporation has no physi- properties, its function being that of a holding company. Con- ently, only eleven of the fourteen companies represented in edule 10 are companies presently engaged in natural gas oper- ns. It is of interest to note that of the eleven companies so ged, there are eight companies which are among the group of atural gas companies listed in Schedule 5, as follows: Hope ral Gas Company; East Ohio Gas Company; Peoples Nat- Gas Company; New York State Natural Gas Corporation; rstate Natural Gas Co., Inc.; Mississippi River Fuel Corpora- ; Colorado Interstate Gas Company; and Natural Gas Pipeline pany of America.

lso of interest is the fact that the companies listed in Sched- 10 produced during the twelve months ended June 30, 1938, oximately 80,000,000 M C. F. of natural gas and in the e period, excluding duplications arising from intercorporate among the respective companies, sold approximately 275,000,- 000 M C. F. of natural gas for ultimate consumption. Although the 80,000,000 M C. F. of gas produced by the combined companies represented only 3.5% of the total nat- ural gas production in the United States in 1938, the 00,000 M C. F. of gas sold by them for ultimate consumption sented in excess of 20% of the total amount of gas consumed e United States in that year other than for field use and for facture of carbon black.

e companies listed in group I of Schedule 10 operate in West inia, Ohio, and Pennsylvania and deliver natural gas to oximately 714,000 customers in numerous cities of which land, Akron, Canton, Youngstown, and Marietta, Ohio; burgh and Altoona, Pennsylvania; and Clarksburg and ersburg, West Virginia, are the largest. This group is the one of the four groups shown in Schedule 10 the members ich are engaged in retail distribution.

e only operating companies in group II are New York State al Gas Corporation and Keuka Construction Corporation, wholly owned subsidiaries of Lycoming United Gas Corpo- . These companies operate in north central Pennsylvania outh central New York. Natural gas is produced and orted by these companies for sale to distribution systems ers in several cities and towns in central New York of

which Syracuse, Auburn, Cortland, and Ithaca are the more important.

Group III consists of two companies; namely, Interstate Natural Gas Co., Inc., and Hope Producing Company. These companies operate production facilities in fields in northeastern Louisiana and a main transmission pipe line extending from the gas fields through Louisiana and across Mississippi to Baton Rouge, Louisiana.

Group IV includes companies in which Standard Oil
125 Company (New Jersey) holds a minority interest. They are all important natural gas pipe-line companies and their operations are described in the Appendix to this Volume I of this exhibit. The companies include Mississippi River Fuel Corporation, Colorado Interstate Gas Company, and Natural Gas Pipeline Company of America.

*Schedule 11.*—In this schedule are presented certain details with respect to long-term financing by Standard Oil Company (New Jersey) since 1926. In November 1926, as indicated in Schedule 11, the company sold an issue of 5% debentures, due 1946, in the principal amount of $120,000,000 at a price of 100½ to yield 4.96% to purchasers. In February 1935 three series of debentures aggregating $37,000,000, due 1939–41, were sold at par to yield 3.25%, 3.50%, and 3.75%, according to maturity. In May 1936 an issue consisting of $85,000,000 of 3% debentures, due 1961, was sold at a discount of 2 points below par to yield 3.12%. It is reported that $55,000,000 principal amount of this issue was privately sold to Rockefeller Foundations. In July 1938, the company sold an issue of 2¾% debentures, due 1953, in the amount of $50,000,000, and 1¾–2½% serial notes, due 1943–47, in the amount of $35,000,000. The 2¾% debentures were offered at 99 to yield 2.83%, and the serial notes were sold at par. The latter serial notes were refunded in July 1940 with proceeds from the sale at par of $35,000,000 of 1¼–1½% serial notes, due 1943–47.

## PETITION FOR REVIEW.

---

*To the United States Circuit Court of Appeals for the Fourth Circuit and the Honorable Judges Thereof:*

Petitioner, Hope Natural Gas Company, hereinafter referred to as "Hope," being aggrieved by orders issued by respondent the Federal Power Commission, hereinafter referred to as the "Commission," in four proceedings under the Natural Gas Act (52 Stat. at L. 821 (1938), 15 U. S. C. Secs. 717-717w) to which Hope was a party, hereby files in this Honorable Court pursuant to Section 19(b) of said Act (15 U. S. C. Sec. 717r(b)) this its written petition to review said orders, praying that said orders be set aside. These orders, designated "Order Reducing Rates" and "Findings As To Lawfulness Of Past Rates," dated May 26, 1942 and served upon Hope on June 1, 1942, were issued by the Commission in four proceedings before it, all consolidated for hearing, entitled and bearing the Commission's docket numbers as follows:

*City of Cleveland, Complainant, v. Hope Natural Gas Company, Defendant,* Docket No. G-100;

*City of Akron, Complainant, v. Hope Natural Gas Company, Defendant,* Docket No. G-101;

*In Re: Hope Natural Gas Company,* Docket No. G-113;

*Pennsylvania Public Utility Commission, Complainant, v. Hope Natural Gas Company, Defendant,* Docket No. G-127.

In support of its petition Hope respectfully represents and shows:

(a)

**THE NATURE OF THE PROCEEDINGS AS TO WHICH REVIEW IS SOUGHT.**

The orders of the Commission of which review is sought fixed rates to be charged by Hope for its interstate sales of natural gas on and after July 15, 1942 and purported to determine the reasonable rates which Hope should have charged for such sales in the past. The proceedings in which these orders were entered were three complaint proceedings before the Commission and one investigatory proceeding instituted on the Commission's own motion, all involving the reasonableness of Hope's interstate natural gas rates, and hereinafter more particularly described.

Hope is a West Virginia corporation, with all of its properties located within the State of West Virginia. It was organized in 1898 and since that time it has continuously been and is now engaged in the production, purchase, transmission and sale of natural gas. In addition to distributing natural gas to consumers located in numerous West Virginia communities, it sells natural gas at or near the West Virginia state line to five companies which distribute natural gas to consumers located in Ohio and Pennsylvania. These five companies are The East Ohio Gas Company, which serves consumers in the Cities of Cleve-

land and Akron, Ohio, as well as numerous other Ohio communities, The River Gas Company which serves consumers principally in Marietta, Ohio and The Peoples Natural Gas Company, Fayette County Gas Company and The Manufacturers Light and Heat Company which serve consumers located in Pennsylvania. Promptly after passage of the Natural Gas Act in 1938 Hope, recognizing the Commission's jurisdiction over its interstate operations, filed its existing sales contracts with these five companies with the Commission as rate schedules pursuant to Section 4(c) of said Act (15 U. S. C. Sec. 717c(c)).

Respondent the Federal Power Commission is a commission created and established by Act of Congress (41 Stat. at L. 1063 (1920), as amended, 16 U. S. C. Sec. 792). By the Natural Gas Act the Commission is vested with certain regulatory powers over persons engaged in the interstate sale of natural gas, including the regulation of rates.

On July 6, 1938 respondent the City of Cleveland, Ohio, being then engaged in a natural gas rate controversy with The East Ohio Gas Company before The Public Utilities Commission of Ohio, filed a complaint against Hope with the respondent Federal Power Commission alleging, in general terms only, that the price charged by Hope to The East Ohio Gas Company for natural gas was excessive and unreasonable and that the determination of a proper rate would be of assistance to The Public Utilities Commission of Ohio in determining local distribution rates for The East Ohio Gas Company in Cleveland. The prayer of the complaint was for an investigation by the Commission and a finding that the existing rate was excessive and unreasonable and that a fair rate be fixed. This complaint, the first under the Natural Gas Act, was docketed by the Commission as No. G-100. Hope filed its answer denying the general charges in the complaint as to the unreasonableness of its rates and averring that the reasonableness of the Hope

rate to The East Ohio Gas Company had been investigated by The Public Utilities Commission of Ohio as recently as 1937, when it was approved by that Commission, and that it was again under investigation by that Commission.

On July 25, 1938 respondent the City of Akron, Ohio, filed a complaint in all respects similar to that filed by the City of Cleveland and this was docketed by the Commission as No. G-101. Hope filed an answer to this complaint similar to that filed in response to the complaint of the City of Cleveland.

On October 14, 1938 the Commission by order instituted a general investigation of all of Hope's interstate rates to determine whether any of them were unjust, unreasonable or discriminatory and if they were to fix and determine the proper rates. This investigation was docketed by the Commission as No. G-113.

On January 6 and 9, 1939 respondent the City of Cleveland filed an amendment to its original complaint and a petition in proceeding No. G-113 asking that the Commission's order of October 14, 1938 in proceeding No. G-113 be modified to include an investigation as to whether Hope had violated the Natural Gas Act by charging The East Ohio Gas Company an excessive rate since June 21, 1938, the effective date of the Natural Gas Act, and praying for a finding that the Natural Gas Act had been so violated. Hope filed answers to this amendment and petition alleging among other matters that since the institution of the original complaint by the City of Cleveland The Public Utilities Commission of Ohio in a proceeding involving The East Ohio Gas Company and the City of Cleveland had investigated the reasonableness of the price charged by Hope to The East Ohio Gas Company and by an order dated January 10, 1939 had found the existing rate to be fair and reasonable. This order was later affirmed by the Supreme Court of Ohio. *East Ohio Gas Company v. Public Utilities Commission*, 137 Ohio State 225 (1940). Thereafter on

March 10, 1939 the City of Cleveland filed supplements to its complaint as amended and to this petition by which it incorporated in the record the aforesaid decision of The Public Utilities Commission of Ohio and its appeal papers from such decision to the Supreme Court of Ohio, to which supplements Hope filed answers. The City of Cleveland's petition in proceeding No. G-113 and the supplement thereto were dismissed by the Commission by order of June 6, 1939.

On March 23, 1939 respondent Pennsylvania Public Utility Commission filed a complaint against Hope with the Commission praying that the Commission investigate the prices charged by Hope to The Peoples Natural Gas Company, Fayette County Gas Company and The Manufacturers Light and Heat Company and fix just and reasonable rates for the same. It also prayed that the Commission investigate and determine that Hope had since June 21, 1938 violated Section 4(a) of the Natural Gas Act. This complaint was docketed by the Commission as No. G-127 and Hope filed its answer thereto.

On October 3, 1939 the Commission issued an order consolidating said proceedings bearing its docket Nos. G-100, G-101, G-113 and G-127 for purposes of hearing, fixing a public hearing on December 4, 1939, requesting Hope to present at such hearing the statement of the cost of its property and plant which Hope was in the process of preparing and ordering Hope to "open and close these proceedings with the presentation of its evidence relevant and material to the question whether, in connection with any transportation or sale of natural gas subject to the jurisdiction of the Commission, any rate, charge or classification, demanded, observed, charged or collected by Hope, or any rule, regulation, practice or contract affecting such rate, charge or classification is unjust, unreasonable, unduly discriminatory or preferential." Hope thereupon filed its petition with the Commission for a reconsidera-

tion and rehearing of this order of October 3, 1939 upon the grounds, among others, that it arbitrarily, unreasonably, unlawfully and unconstitutionally attempted to impose the burden of proof upon Hope and denied it a fair hearing by requiring it to present proof of its innocence of violations of the Natural Gas Act simply because the complainants had filed general claims that it was guilty of such violations, instead of requiring it to meet only specific charges and specific evidence against it as these were produced. The Commission by its order of November 28, 1939 denied Hope's petition for a reconsideration and rehearing of its order dated October 3, 1939, but postponed the date of the commencement of public hearings to April 1, 1940.

By orders dated April 2, 1940 the Commission permitted the State of West Virginia and The Public Service Commission of West Virginia to intervene in the four proceedings previously consolidated and by order dated May 28, 1940 permitted the City of Toledo, Ohio, to intervene in the proceedings bearing docket No. G-113.

In April and June, 1940 hearings were held before the Honorable Edward B. Marsh, a Trial Examiner appointed and designated for the purpose by the Commission, at which hearings Hope was required pursuant to said order of October 3, 1939 to present evidence sustaining the reasonableness of its interstate rates although none of the respondents herein had made any specific claims as to the respects in which said rates were unreasonable and none had presented any evidence. By order dated December 20, 1940 the Commission denied a motion of the Cities of Cleveland and Akron for an immediate order reducing Hope's rates to The East Ohio Gas Company.

Further hearings were postponed by the Examiner or by the Commission from June, 1940 until March 3, 1941. Between that date and July 19, 1941 the taking of evidence was concluded by testimony of members of the Com-

mission's staff and rebuttal testimony presented by Hope. The other respondents and the interveners conducted some cross-examination but presented no other evidence.

On September 30, 1941 Hope filed an application with the Commission that Examiner Marsh be directed to serve upon it, promptly after its delivery to the Commission, a copy of any report that he might make in these proceedings to the Commission and that a reasonable time thereafter be fixed within which Hope should have an opportunity to file with the Commission its exceptions and objections to such report, and further requesting oral argument before the Commission *en banc*. By its order of October 3, 1941 the Commission denied Hope's application for service upon it of the Trial Examiner's report and fixed October 27, 1941 as the date for oral arguments.

On October 21, 1941 Hope filed a petition for a reconsideration and rehearing of the Commission's order of October 3, 1941 pointing out that those who are brought into contest with the Government in a quasi-judicial proceeding aimed at control of their activities are entitled to be fairly advised of what the Government proposes and to be heard upon its proposals before it issues a final command, that in these proceedings Hope had not yet been advised of what the Commission proposed, and that its denial of service of the Examiner's report denied it such advice. Hope also pointed out that it is the uniform practice of all important federal administrative bodies that when evidence is heard by a Trial Examiner the report of such examiner is served upon all interested parties who are given an adequate opportunity to take exceptions before the administrative body enters its final order; and that in departing from such uniform practice the Commission violated the provisions of the Natural Gas Act which require a full and fair hearing, satisfying not only the constitutional requirements of due process of law but also the basic principles of proper administrative procedure. By

an order dated November 4, 1941 the Commission denied this application for a rehearing.

On October 27, 1941 oral argument was had before the Commission *en banc*.

On June 1, 1942 the Commission served upon Hope its "Order Reducing Rates" and its "Findings As To Lawfulness Of Past Rates," dated May 26, 1942, which contain a number of findings, incorporate therein the Commission's Opinion No. 76, and are the orders herein petitioned to be reviewed by this Honorable Court.

Said "Order Reducing Rates" ordered Hope: (A) to decrease its interstate rates on an annual basis by not less than $3,609,857; (B) to charge its five interstate customer companies in the future average rates per thousand cubic feet of gas as follows: The East Ohio Gas Company, 29.5¢, The Peoples Natural Gas Company, 28.5¢, Fayette County Gas Company, 28.5¢, The Manufacturers Light and Heat Company, 28.5¢ and The River Gas Company, 35¢; (C) to file on or before July 1, 1942 new schedules of rates reflecting not less than such reduction and providing for such average rates; (D) to make such new schedules effective as to all bills based on meter readings made on or after July 15, 1942; and (E) on and after the effective date of such new schedules to cease and desist from making, demanding or receiving any rates and charges other than those so ordered until changed by order of the Commission. Said order required a substantial reduction in the average rates charged by Hope to each company except The River Gas Company, which latter rate was not changed by said order.

In said "Findings As To Lawfulness Of Past Rates" the Commission found, among other matters, that the interstate rates charged by Hope were unjust, unreasonable and excessive and therefore unlawful to the extent of $920,029 for the year 1939, $4,210,154 for the year 1940 and $3,609,857 annually since 1940, and that the rates

charged by Hope to said The East Ohio Gas Company were unjust, unreasonable, excessive and therefore unlawful to the extent of $830,892 during 1939, $3,219,551 during 1940, and $2,815,789 annually since 1940; and declared that "Since the enactment of the 1938 Natural Gas Act this Commission has had exclusive jurisdiction to determine the lawfulness of the interstate wholesale rates charged by Hope and other natural gas companies."

On June 24, 1942 Hope filed with the Commission its application for a reconsideration, rehearing and stay of the Commission's said findings and orders dated May 26, 1942 in accordance with Sections 19(a) and 19(c) of the Natural Gas Act (15 U. S. C. Secs. 717r(a) and (c)). In this application Hope urged before the Commission each of the objections to said findings and orders which Hope requests this Honorable Court to consider and which are hereinafter set forth as the points on which Hope intends to rely.

On July 9, 1942 the Commission served upon Hope its order dated July 7, 1942 denying Hope's aforesaid application for a reconsideration, rehearing and stay of the Commission's findings and orders dated May 26, 1942.

## (b)

## THE FACTS AND THE STATUTES UPON WHICH VENUE IS BASED.

Hope was a party to proceedings under the Natural Gas Act as hereinbefore set forth. Hope is located entirely within the State of West Virginia and has its principal place of business at Clarksburg, West Virginia, all within the circuit of this Honorable Court.

The statute upon which venue is based is Section 19(b) of the Natural Gas Act (15 U. S. C. Sec. 717r(b)) which, so far as here pertinent, reads as follows:

> "(b) Any party to a proceeding under this act aggrieved by an order issued by the Commission in

such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. * * *"

(c)

**THE RELIEF PRAYED.**

Hope respectfully prays:

(1) That a copy of this petition be forthwith served upon a member of the Commission in accordance with Section 19(b) of the Natural Gas Act (15 U. S. C. Sec. 717r(b)), and upon the other respondents, the City of Cleveland, the City of Akron, and the Pennsylvania Public Utility Commission, in accordance with this Honorable Court's Rule 27;

(2) That the Commission be required, in compliance with said Section 19(b) of the Natural Gas Act, to certify and file with this Honorable Court a transcript of the record upon which the orders complained of in this petition were entered, including the pleadings, motions, applications, exceptions, exhibits, testimony, report of the Trial Examiner, various orders of the Commission and the final opinion, findings and orders of the Commission in said proceedings before it bearing its docket Nos. G-100, G-101, G-113 and G-127;

(3) That this Honorable Court review the Commission's said "Order Reducing Rates" and "Findings As To Lawfulness Of Past Rates" dated May 26, 1942 in said proceedings before the Commission;

(4) That after such review this Honorable Court set aside said orders, and each of them, in whole; and

(5) That this Honorable Court grant Hope such other and further relief as may be required by law and the Constitution of the United States and such other and further relief as may be just and equitable.

(d)

## THE POINTS ON WHICH THE PETITIONER INTENDS TO RELY.

Hope intends to rely upon each of the separately numbered points set forth below. Without waiving any of these but solely for the convenience of this Honorable Court Hope states that the principal questions raised by these points are the following:

(a) Whether Hope was accorded a fair hearing in accordance with the Natural Gas Act and the Constitution.

(b) Whether a rate base which includes merely the depreciated book cost of Hope's property devoted to public service and ignores (i) the much larger original cost of that property, (ii) the much larger reproduction cost of that property, (iii) the 50% increase in the applicable price levels between the average dates that the property was constructed and the date the rate base was determined, and (iv) all evidence whatsoever of the much larger present value of that property is a valid rate base under the Natural Gas Act and the Constitution.

(c) Whether a rate base from which has been deducted a theoretical calculated depreciation reserve which is much greater percentagewise than the actual accrued deprecia-

tion in Hope's property determined by engineering observation, measurements and judgment and from the actual depreciation experience of the property is a valid rate base under the Natural Gas Act and the Constitution.

(d) Whether the amounts allowed in the rate base for unoperated leaseholds, additional capital expenditures and working capital were reasonable and proper allowances under the Natural Gas Act and the Constitution.

(e) Whether the Commission can under the Natural Gas Act and the Constitution fix the fair rate of return in accordance with what it found to be present day costs of money, while fixing the rate base in accordance with the varying costs of property over the last forty years, in view of the uncontradicted evidence that at the times said property costs were actually incurred the costs of capital for such enterprises were very substantially higher than present day capital costs.

(f) Whether in fixing rates for the future the Commission can under the Natural Gas Act and the Constitution wholly ignore Hope's operating experience in the past and particularly for the years 1937 to 1939, both inclusive, and base future rates solely on the abnormal war year 1940.

(g) Whether the Commission properly determined certain operating expenses of Hope.

(h) Whether the Commission under the Natural Gas Act has any authority whatever to consider or pass upon the lawfulness of Hope's past rates fixed by schedules filed with it; and, if it has such authority, whether it did not commit for past years the same errors on rate base, rate of return and operating expenses as it committed in fixing Hope's future rates, as well as additional errors.

The points which raise these and some other questions, upon each of which points Hope relies and each of which was urged before the Commission as an objection by Hope

in its application for a reconsideration, rehearing and stay which the Commission denied as hereinbefore set forth, are as follows:

## PART A

## As To The Commission's "Order Reducing Rates":

### Point 1.

The Commission failed to accord Hope the hearing required by Section 5(a) of the Natural Gas Act (15 U. S. C. Sec. 717d(a)) and the fair hearing required by the due process clause of Amendment V to the Constitution of the United States, particularly in putting on Hope the effective burden of proof to establish the justness and reasonableness of its interstate rates; in requiring that such burden be discharged by Hope without being apprized of the specific claims of the complainants, respondents the Cities of Cleveland and Akron and the Pennsylvania Public Utility Commission, or the Commission against it; in adopting and applying in said findings and orders after closing the taking of evidence the very rate base theories which during the taking of the evidence it rejected in its order of December 20, 1940 denying the motion of the Cities of Cleveland and Akron for an immediate order reducing rates; in refusing by its order of October 3, 1941 to serve upon Hope a copy of the report of its Examiner, who alone heard all the evidence; and in denying Hope any opportunity to except to said Examiner's report and be heard thereon or to know otherwise, prior to the Commission's orders served June 1, 1942, either the specific claims against its rates or the action thereon contemplated by the Commission. The Commission therefore erred in stating in its Opinion No. 76, incorporated by reference in said findings and orders, that "Each party to these proceedings was cognizant of the issues and was afforded ample opportunity to present evidence."

**Point 2.**

The Commission exceeded the power and authority delegated to it by the Natural Gas Act, and the power and authority constitutionally delegable to it by Congress, by adopting and applying a rule that whether rates for interstate sales of natural gas are unjust, unreasonable and excessive, and therefore unlawful, under Sections 4(a) and 5(a) of the Natural Gas Act (15 U. S. C. Secs. 717c(a) and 717d(a)) is to be determined solely and exclusively upon the rate of return earned upon a so-called rate base consisting of the book cost, adjusted only for so-called accounting errors, of the properties rendering such service, less a hypothetical depreciation reserve requirement, plus working capital, irrespective of the relationship of such adjusted book cost, or of such adjusted book cost less such hypothetical reserve requirement, to the original cost or the present value of such properties. Under this rule the Commission gave no consideration to the rate of return earned upon the present value, or upon the original cost or the actual legitimate cost or such cost less the actual existing depreciation, of such properties of Hope, all of which constitutes legislation and administration by the Commission in excess of its statutory and constitutional powers.

**Point 3.**

The Commission failed to discharge the duty imposed upon it by the Natural Gas Act, including Section 6(a) thereof (15 U. S. C. Sec. 717e(a)), of investigating, ascertaining and considering the fair value of Hope's properties, or the facts bearing thereon, in determining rates and charges for Hope's interstate sales. Neither the facts bearing on the fair value of Hope's property nor such fair value itself were at any time investigated, ascertained or considered by the Commission's staff or by the Commission.

**Point 4.**

The Commission erroneously construed the term "actual legitimate cost" as used in Section 6(a) of the Natural Gas Act and the term "original cost" as used in Section 6(b) of the Natural Gas Act (15 U. S. C. Sec. 717e(b)) as meaning the book cost of the property of a natural-gas company, adjusted only for so-called accounting errors, and erroneously failed to construe said terms to mean the amounts of money or its equivalent actually spent to construct the property. The Commission, erroneously, investigated and ascertained only such book cost of Hope's property and, erroneously, neither investigated nor ascertained the original cost or the actual legitimate cost of Hope's property.

**Point 5.**

The Commission erroneously construed the term "the depreciation therein" as used in Section 6(a) of the Natural Gas Act as meaning merely a hypothetical depreciation reserve requirement, calculated on accounting principles, applicable to the adjusted book cost of the property of a natural-gas company, and erroneously failed to construe said term to mean the depreciation actually existing in the property of a natural-gas company. The Commission, erroneously, neither investigated nor ascertained the depreciation actually existing in Hope's property, but merely calculated the depreciation reserve which it thought should appear on Hope's books and treated this revised book depreciation reserve as "the depreciation" in Hope's property. The Commission further erroneously construed said term "the depreciation therein" as including estimated sums which a natural-gas company may spend in the future to abandon its property. It erroneously included in its revised book depreciation reserve for Hope many millions of dollars which it estimated Hope would spend in the

future to abandon its properties and erroneously treated these estimated future operating expenses as "depreciation" in Hope's property.

**Point 6.**

The Commission erroneously construed Sections 4(a) and 5(a) of the Natural Gas Act to mean that a rate and charge which in any one year produced any amount in excess of 6½ per cent return upon the book cost, adjusted only for so-called accounting errors, of the properties rendering such service, less a hypothetical depreciation reserve requirement, plus working capital, is in such year not just and reasonable, but is unjust and unreasonable and hence unlawful, and that it is authorized to fix as the just and reasonable rate and charge for each year one which would produce only such return. The Commission rigorously applied this erroneous construction in considering and fixing Hope's interstate rates.

**Point 7.**

The Commission erred in not finding that the rates charged and received by Hope for the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption are just and reasonable and erred in finding that they are unjust, unreasonable and excessive, and therefore unlawful, to the extent of $3,609,857 annually and in ordering that such rates be decreased (a) to reflect a reduction in revenues on an annual basis of not less than $3,609,857 and (b) to produce average rates for the following customer companies for the future as follows:

| | Average Rate Per M.c.f.—Cents |
|---|---|
| The East Ohio Gas Company | 29.5 |
| The Peoples Natural Gas Company | 28.5 |
| Fayette County Gas Company | 28.5. |
| The Manufacturers Light and Heat Company | 28.5 |

*(Findings (24), (25), (26), and Orders (A) to (E), inclusive, of "Order Reducing Rates").**

In not finding Hope's rates just and reasonable as aforesaid and in making said findings and order and the further findings and conclusions next italicized *(first (except 1st sentence), second, sixth (including table), eleventh and twelfth paragraphs under heading "Reasonable Earnings and Rates for the Future" of Opinion No. 76)*:

(a) The Commission proceeded unlawfully, exceeded its statutory and constitutional powers and erroneously construed the terms and provisions of the Natural Gas Act as set forth in Points 1, 2, 3, 4, 5 and 6 above;

(b) The Commission acted arbitrarily, unreasonably and without support in the evidence and erroneously incorporated, reflected and relied upon the erroneous findings and conclusions set forth in Points 8 to 21, inclusive, below; and

(c) The Commission prescribed rates and charges which do not permit Hope to earn the just compensation for the use of its property in public service, or the fair return on the present fair value of its property, to which it is entitled under Amendment V to the Constitution of the

* This and subsequent italicized references to said "Order Reducing Rates" and said "Findings As To Lawfulness Of Past Rates" and said Opinion No. 76 as incorporated thereto designate specific findings, orders, statements and conclusions of the Commission constituting error and herein urged as points of objection by Hope.

United States and which deprive it of its property without due process of law and take it for public use without just compensation in violation of said Amendment V, by reason of which said "Order Reducing Rates" and the rates and charges prescribed for Hope by the Commission therein are unconstitutional and void.

**Point 8.**

The Commission erroneously gave no consideration whatever to any of the extensive evidence in the record of the reproduction cost new, and less depreciation, of Hope's property devoted to its interstate service and erroneously rejected relevant evidence thereof consisting of agreements between complainants, the Cities of Cleveland and Akron, and Hope's affiliate, The East Ohio Gas Company, as to the reproduction cost new and less depreciation of such properties of Hope (Exhibits 121 and 122, Record, pp. 5927-5945). The Commission should have found, and erred in not finding, that the reproduction cost new of said physical properties (exclusive of property used to transport coke oven gas and property acquired by Hope from the Reserve Gas Company (excluded by agreement, see footnotes 3 and 4 of Opinion No. 76), leaseholds and working capital and without any allowance for the development of Hope's business or for going concern value or for discovery or other value of gas leaseholds) was $94,973,856 as of December 31, 1938, $94,894,072 as of December 31, 1939 and $95,882,315 as of December 31, 1940. It not only ignored each and every part of Hope's evidence thereon, but it ignored all other evidence of reproduction cost and failed to investigate, make and consider a reproduction cost estimate of its own. These actions of the Commission and each of them, and the findings and conclusions next italicized, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence and reflect the errors specified in Points 1, 2, 3, 4 and 5

above. *(Finding (7) of "Order Reducing Rates"; second, third, fourth, eighth and ninth paragraphs and footnote 6 under the heading "The Company's Estimates of Reproduction Cost and Trended 'Original Cost'" of Opinion No. 76).*

**Point 9.**

In arriving at its so-called rate bases the Commission erroneously ignored all evidence of the very great changes in price levels that occurred between the dates at which various items of Hope's interstate properties were constructed, beginning with 1891, and the present and erroneously failed to take notice of such changes as a matter of common and judicial knowledge. It should have found, and erred in not finding, that approximately one-half of Hope's properties in interstate service on December 31, 1938 were constructed prior to 1917 at an original cost of approximately $25,000,000 and the other half since that date at an original cost of approximately $45,000,000; that the original cost of said properties of approximately $70,000,000 adjusted to actual 1938 prices would have been more than $105,000,000 and that the present level of prices applicable to Hope's properties is on the average 50 per cent above the price levels at which said properties were actually constructed. The Commission not only ignored all evidence of the changing price levels but it did not itself investigate, determine or give any consideration to any change in the level of prices applicable to Hope's properties between the respective dates at which Hope's interstate properties were actually constructed and the date of its investigation, either as an important factor bearing upon the rate base or present fair value or the fair return or otherwise. The Commission's findings and conclusions as to Hope's evidence of the trended original cost of its properties as next italicized and its failure to make such findings and to investigate and consider any change in the

level of applicable prices, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence, and reflect the errors specified in Points 1, 2, 3, 4 and 6 above. *(Finding (8) of "Order Reducing Rates"; fifth (except the first two sentences), sixth, seventh, eighth and ninth paragraphs and footnote 6 under the heading "The Company's Estimates of Reproduction Cost and Trended 'Original Cost'" of Opinion No. 76).*

**Point 10.**

The Commission erroneously did not find either the original cost or the actual legitimate cost of Hope's properties. The Commission should have found, and erred in not finding, that the original cost and the actual legitimate cost of Hope's properties (exclusive of distribution properties, property used to transport coke oven gas, property acquired by Hope from the Reserve Gas Company and working capital) was $69,735,638 as of December 31, 1938, $69,609,811 as of December 31, 1939 and $70,574,297 as of December 31, 1940. The Commission's failure to make such findings and its findings and conclusions as to Hope's evidence of the original cost of its property as next italicized, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence, and reflect the errors specified in Points 1, 2, 3, 4 and 6 above. *(Findings (9) and (10) of "Order Reducing Rates"; second paragraph under the heading "Actual Legitimate Cost"; first (except the 1st and 5th sentences), third (except the (1st and 2nd sentences), fifth (1st sentence only), seventh (last sentence only), eighth, ninth (first and last sentences only), tenth, eleventh, thirteenth (except table), fourteenth (last 3 sentences only) and fifteenth (except the 1st sentence) paragraphs and Table A under the heading "The Company's Estimated 'Original Cost'"; and each paragraph under the heading "Impropriety Of Including In Rate Base Items Previously Charged To Expense" of Opinion No. 76).*

**Point 11.**

The Commission erroneously found what it termed the "actual legitimate cost" of Hope's property (exclusive of distribution property, property used to transport coke-oven gas, and unoperated acreage) to be Hope's "Gross Investment in Gas Plant in Service" as follows:

| | |
|---|---|
| As of December 31, 1938 | $51,207,621 |
| As of December 31, 1939 | 51,019,585 |
| As of December 31, 1940 | 51,957,416 |
| For the Future | 51,957,416 |

*(Finding (11) of "Order Reducing Rates").*

Said findings and the findings and conclusions next italicized, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence, and reflect the errors specified in Points 1, 2, 3, 4, 6 and 10 above. *(Table A; all paragraphs and table (except findings as to net additions in 1939 and 1940) under heading "Actual Legitimate Cost or Gross Plant Investment"; last 2 sentences of first paragraph and the subsequent text and table under heading "Conclusions With Respect to the Rate Base" of Opinion No. 76).*

**Point 12.**

The Commission erroneously found what it termed the "actual existing depletion and depreciation" in Hope's property (exclusive of distribution property, property used to transport coke oven gas and unoperated acreage) to be as follows:

| | |
|---|---|
| As of December 31, 1938 | $21,188,122 |
| As of December 31, 1939 | 21,737,823 |
| As of December 31, 1940 | 22,328,016 |
| For the Future | 22,328,016 |

*(Finding (12), of "Order Reducing Rates"; table and last paragraph under heading "Conclusions With Respect to the Rate Base" of Opinion No. 76).*

The Commission should have found, and erred in not finding, that the "actual existing depletion and depreciation" in Hope's said properties, and "the depreciation therein," was no more than approximately 34.5 per cent of the undepreciated value of the physical properties and 71.5 per cent of the original acquisition cost of the operated leases (or an average of 35.15 per cent as of December 31, 1938, 36.06 per cent as of December 31, 1939 and 36.71 per cent as of December 31, 1940). Said findings and the further findings and conclusions next italicized, and said failure to make such findings, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence and reflect the errors specified in Points 1 to 6 and 8 to 11, inclusive, above. *(First (1st sentence only), second, third and fourth paragraphs under the heading "Depletion and Depreciation"; first (2nd sentence only), third (last sentence only), fourth (1st sentence only), fifth, sixth (1st, 3rd and last sentences and footnote 20 only), seventh, eighth (first 2 sentences, footnote 22 and first 2 sentences after "(3)" only), ninth, tenth, and twelfth paragraphs under the heading "The Required Reserve For Depletion and Depreciation" and second sentence under heading "Rate Base" of Opinion No. 76).* Said findings also:

(a) Disregard all the evidence as to the actual existing depreciation and depletion in said properties as determined by observation, measurement, engineering and operating judgment, the actual depreciation experience of said properties and the decline in gas content, in favor of hypothetical accounting reserves, applicable only to book costs, based on estimated annual depreciation and depletion rates and on estimated accruals necessary to provide for the future expense to abandon properties;

(b) Apply erroneous estimated annual rates of depreciation and depletion based on estimated service lives of short duration and on estimated depletion percentages which disregard Hope's actual experience on depreciation,

depletion and salvage and which have no foundation in fact; and

(c) Calculate excessive depreciation and depletion reserves by application of the aforesaid erroneous annual rates and by assuming, contrary to the facts and to the evidence, that the "existing depletion and depreciation" in the properties purchased by Hope at the time of their purchase was measured by the book depreciation and depletion reserves of the companies from which Hope purchased such properties; that Hope's book reserves measure the "actual existing depletion and depreciation" in Hope's autos and trucks and drilling and cleaning equipment; that the hypothetical reserve for depreciation of Hope's communication equipment should be sufficient at the present time not only to retire all of the present communication equipment at the end of its estimated useful life but all of the communication equipment which Hope has ever retired from the beginning of business to date; that each field line will be abandoned upon the exhaustion of the particular gas pool areas to which the Commission assigned it as these alleged pools existed at December 31, 1938; that field lines will handle gas only from wells existing on December 31, 1938; that the depletion of 772 existing wells can be based on the rate of gas production from all of Hope's abandoned wells plus its existing 3300 wells; that an estimated amount for the future cost of abandoning properties constitutes "existing depletion and depreciation" and that there is additional existing depletion of over $2,100,000 in such of Hope's properties as were originally capitalized on its books, including therein the construction costs of only 772 wells, by reason of the fact that in the future it will cost an estimated $3,285,000 to abandon Hope's 3300 existing wells.

**Point 13.**

The Commission erroneously found that its purported "actual legitimate cost" of Hope's property (exclusive of distribution property, property used to transport coke oven gas and unoperated acreage), less its purported "actual existing depletion and depreciation," is as follows:

| | |
|---|---|
| As of December 31, 1938 | $30,019,499 |
| As of December 31, 1939 | 29,281,762 |
| As of December 31, 1940 | 29,629,400 |
| For the Future | 29,629,400 |

*(Finding (13) of "Order Reducing Rates;" table and last paragraph under heading "Conclusions With Respect to the Rate Base" of Opinion No. 76).*

Said findings, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence, and reflect the errors specified in Points 1, 2, 3, 4, 5, 6, and 8 to 12, inclusive, above. The Commission should have found, if it desired to find the original cost or actual legitimate cost of said properties of Hope, less actual existing depletion and depreciation, and erred in not finding the same to be $44,781,361 as of December 31, 1938, $44,083,535 as of December 31, 1939 and $44,246,477 as of December 31, 1940. The Commission further erred in deducting any amount for depletion or depreciation from the original cost or actual legitimate cost of Hope's properties for rate base purposes.

**Point 14.**

The Commission erroneously found what it termed the "actual legitimate cost" of Hope's unoperated acreage to be as follows:

| | |
|---|---|
| As of December 31, 1938 | $584,382 |
| As of December 31, 1939 | 567,152 |
| As of December 31, 1940 | 566,105 |
| For the Future | 566,105 |

*(Finding (15) of "Order Reducing Rates;" last full sentence under the heading "Other Used and Useful Property" and table and last paragraph under heading "Conclusions With Respect to the Rate Base" of Opinion No. 76).*

The Commission should have found, and erred in not finding, that the original cost and the actual legitimate cost of such unoperated acreage was $681,882 as of December 31, 1938, $664,652 as of December 31, 1939 and $663,605 as of December 31, 1940. Said findings and said failure to make such findings, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence and reflect the errors specified in Points 4 and 10 above.

**Point 15.**

The Commission erroneously found that the working capital necessary for the continued and efficient operation of Hope's interstate natural gas business is as follows:

| | |
|---|---|
| As of December 31, 1938 | $2,100,000 |
| As of December 31, 1939 | 2,100,000 |
| As of December 31, 1940 | 2,125,000 |
| For the Future | 2,125,000 |

*(Finding (16) of "Order Reducing Rates;" third and fourth paragraphs under heading "Materials and Supplies Plus Cash Working Capital" and table and last paragraph under heading "Conclusions With Respect to the Rate Base" of Opinion No. 76).*

The Commission should have found, and erred in not finding, that said amount should be $2,997,230 in each year. Said findings, and said failure to make such finding, and each of them, are arbitrary, unreasonable, unlawful and without support in the evidence.

**Point 16.**

The Commission erroneously found that Hope's additional capital expenditures (less increases in depletion and depreciation reserves) in the three-year period 1941-1943 would result in an average increase in net actual legitimate cost for that period of only $1,392,021. *(Finding (17) of "Order Reducing Rates;" text and footnote under heading "Estimated Additional Fixed Capital Expenditures" and table and last paragraph under heading "Conclusions With Respect to the Rate Base" of Opinion No. 76).* The Commission should have found and erred in not finding that the actual increase in net actual legitimate cost by July 1, 1942, when Hope was ordered to file new rates, upon the basis of its own estimates of annual depletion and depreciation, was $2,027,021, and that for the future period after July 15, 1942, for which the Commission ordered new rates, the average increase in net actual legitimate costs would be at least an additional $2,027,021. Said findings and said failure to make such findings, and each of them, are arbitrary, unreasonable and unlawful.

**Point 17.**

The Commission erroneously found, and used as the basis of its said order, rate bases as follows:

| | |
|---|---|
| As of December 31, 1938 | $32,703,881 |
| As of December 31, 1939 | 31,948,914 |
| As of December 31, 1940 | 32,320,505 |
| For the Future | 32,712,526 |

*(Finding (18) of "Order Reducing Rates;" table and last paragraph under heading "Conclusions With Respect to the Rate Base" of Opinion No. 76).*

Upon the basis of the evidence before it, upon the evidence which it erroneously excluded as set forth in Point 8 above and the relevant evidence of the determinations by the State of West Virginia of the true value in money of Hope's physical property which the Commission erroneously rejected (Exhibits 108 and 109, Record, pp. 5399-5429), or upon its own investigation as to the present value of Hope's interstate properties, which the Commission erroneously failed and refused to make, the Commission should have found, and erred in not finding, that the present value of said properties was not less than $66,360,837 as of December 31, 1938, $65,404,707 as of December 31, 1939, $65,392,233 as of December 31, 1940 and $68,265,225 for the future, and that for the purpose of determining just and reasonable rates the rate base should be represented by said present values. Said findings, said rejections of relevant evidence, said failure to make investigation, and said failures to make such findings, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence, and reflect the errors specified in Points 1 to 6 and 8 to 16, inclusive, above.

**Point 18.**

The Commission erroneously found that the fair rate of return for Hope is not more than 6½ per cent upon the rate bases found by it and that $2,191,314 is the maximum fair annual return which Hope is entitled to earn in the future. *(Findings (18) and (19) of "Order Reducing Rates;" second and third paragraphs and footnote 5 under the heading "Corporate And Financial History;" first sentence under heading "Rate Base;" last paragraph under heading "Impropriety Of Including In Rate Base Items Previously Charged To Expense;" and all paragraphs except the first 5 sentences under heading "Rate of Return" of Opinion No. 76).* The Commission should

have found; and erred in not finding, that the fair rate of return on the present fair value of Hope's interstate property is not less than 8 per cent; that the fair rate of return upon a prudent investment or original cost or actual legitimate cost rate base for Hope's interstate property is not less than a weighted average of 11.8 per cent; and that the minimum fair annual return to which Hope is entitled from its interstate business and upon its interstate properties is at least $5,000,000. Said findings and said failures to make such findings, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence, and reflect the errors specified in Points 1 to 6 and 8 to 17, inclusive, above.

**Point 19.**

The Commission erroneously found that Hope's operations for 1940, as adjusted by the Commission, are a proper basis for fixing future rates. *(Finding (20) of "Order Reducing Rates;" first paragraph under heading "Operating Revenues and Expenses;" first paragraph under heading "Future Operating Expenses;" and first paragraph (except 1st sentence) under heading "Reasonable Earnings and Rates for the Future" of Opinion No. 76).* The Commission should have found, and erred in not finding, that the year 1940 was a year of abnormal operations by Hope; that Hope's sales of gas in that year greatly exceeded those of any other year in the previous twenty; that Hope's operating expenses for that year were abnormally low (by at least $2,000,000) with relation to the volume of sales because of the necessity and temporary feasibility of meeting the sudden industrial demands of that year by excessive withdrawals from Hope's own gas reserves and at costs far below normal or average costs; and that Hope's average operating experience for the years 1937 to 1939, inclusive, or at most for the years 1937 to 1940, inclusive, adjusted for known increases in operating expenses, is the proper

basis for testing the reasonableness of present rates or fixing future rates. Said findings and said failures to make such findings, and each of them, are arbitrary, unreasonable, unlawful and without support in the evidence.

**Point 20.**

The Commission erroneously found that the proper credit to Hope's operating expenses by reason of the gasoline and butane extracted from its gas by its affiliate, Hope Construction & Refining Company, and the steam and boiler fuel furnished such company (except steam furnished at Goff Station), was $352,516 for 1939, $304,697 for 1940 and $304,697 annually since 1940. *(Finding (22) of "Order Reducing Rates;" all paragraphs and tables under heading "Affiliate's Excess Profits From Processing Hope Company's Gas" of Opinion No. 76).* The Commission should have found, and erred in not finding, that the proper credit resulting from such operations should be an average of $178,656 per year for the period 1937-1939, inclusive, and $174,288 per year for the period 1937-1940, inclusive. Said findings, and said failure to make such findings, and each of them, are arbitrary, unreasonable, unlawful, unconstitutional, without support in the evidence and reflect as to the property and operations of Hope Construction & Refining Company the same errors as specified with respect to the property and operations of Hope in Points 1 to 6 and 8 to 19, inclusive, above and 21 below.

**Point 21.**

The Commission erroneously found that the reasonable and proper allowances for Hope's operating expenses were as follows:

| | 1939 | 1940 | Since 1940 |
|---|---|---|---|
| Operating Expenses | $14,242,454 | $15,775,195 | $16,272,934 |
| Miscellaneous Gas Revenues | ( 68,695) | ( 83,275) | ( 83,275) |
| Allocation of Costs to Local West Virginia Sales | ( 2,328,110) | ( 2,694,075) | ( 2,694,075) |
| Total Deductions from Interstate Revenues | $11,845,649 | $12,997,845 | $13,495,584 |

*(Finding (23) of "Order Reducing Rates.")*

The Commission should have found, and erred in not finding, that the reasonable and proper allowances for Hope's operating expenses (including amortization of reclassification and rate case expenses) and after allocation of costs to local West Virginia sales, miscellaneous gas revenues, and taxes (namely, the "Total Deductions from Interstate Revenues") were $13,157,098 for 1937, $12,980,238 for 1938, $12,646,399 for 1939, $14,658,087 for 1940, at least $15,475,034 annually since 1940 and at least $17,475,034 annually after July 15, 1942.

Said findings and the further findings and conclusions next italicized as follows: *all paragraphs under the heading "Depletion and Depreciation Expenses"; 4th, 5th, 6th and 8th sentences under heading "Reclassification and Rate Case Expenses"; second paragraph (3d, 4th, 7th and 8th sentences only) under the heading "Exploration and Development Costs"; all paragraphs under the heading "Affiliate's Excess Profits From Processing Hope Company's Gas"; third (except 1st sentence), sixth and seventh paragraphs under the heading "Other Adjustments to Operating Expenses"; amounts set forth for following items in the first table under heading "Operating Expenses Summary": "Excess Profits on Gasoline and Butane," "Steam Furnished H. C. & R. Co.," "Excess Cost of Coke-oven Gas," "Donations," "Expenses Applicable to Prior Years," "Adm. & General Expenses Capitalized in Error."*

*"Depletion and Depreciation," "Reclassification and Rate Case Expenses," "Total Decreases," "Total Increases," "Total Adjustments"; amounts set forth for following items in the second table under the heading "Operating Expenses Summary" and in the last table before the heading "Rate of Return": "Natural Gas Production," "Transmission Expenses," "Administrative and General Expenses," "Depletion," "Depreciation" (interstate and specific distribution), "Exploration and Development Costs," "Taxes: State and Miscl. Federal," "Federal Income Tax" (as adjusted for future), "Total Interstate," "Total Distribution," "Total Operating Expenses"; second (except 1st sentence), fourth (except table) and fifth paragraphs and footnote 32 under the sub-heading "Federal Income Tax" of the heading "Operating Expenses Summary"; amounts set forth for following items in the first table after the sub-heading "Federal Income Tax" of the heading "Operating Expenses Summary" and in the first table under the heading "Reasonable Earnings and Rates for the Future": "Interstate Operating Expenses" and "Operating Expenses," "Allocation of Costs to Local West Virginia Sales" including "Specific Distribution Expenses" and "Return at 6½% on Distribution Property" in Footnote 31, "Federal Income Tax at 40%" (after income tax saving), "Total Deductions from Interstate Revenues," "Net Operating Revenue (Income) from Interstate Sales," "Return at 6½% on Interstate Rate Base," "Excess Earnings before Income Tax Saving," "Income Tax Saving," "Excess Earnings after Income Tax Saving," "Excess of Future Net Operating Income over 6½% Return"; second and fifth (3rd sentence only) paragraphs under the heading "Reasonable Earnings and Rates for the Future" of Opinion No. 76,* and each of said findings and conclusions, and the failures of the Commission to make the findings it should have made as aforesaid, are

arbitrary, unreasonable, unlawful, unconstitutional and without support in the evidence, particularly because:

(a) The Commission erroneously based depreciation and depletion charges upon the book cost of Hope's properties, adjusted only for so-called accounting errors, in lieu of basing the same upon the present or replacement value of said properties as is required by the Natural Gas Act and in order to avoid depriving Hope of said properties without due process of law and taking them for public use without just compensation in violation of Amendment V to the Constitution of the United States. In so doing the Commission allowed no depreciation or depletion charge in respect of thousands of items of property owned by Hope which are actually existing and being consumed in the interstate service of Hope and for which no amounts whatsoever appear in said adjusted book cost;

(b) The Commission erroneously failed to allow any amount whatsoever for the annual depreciation and depletion of the net additional properties added by Hope since December 31, 1940 to date and now used in its interstate service, which the Commission found to total $1,392,021 and which it should have found as $2,027,021 as set forth in Point 16 above; and further erroneously failed to allow any amount whatsoever for the annual depreciation and depletion of the net additional properties which will be added by Hope as set forth in Point 16 above during the future period after July 15, 1942, for which the Commission ordered new rates;

(c) The Commission used erroneous annual depreciation rates which reflect erroneous estimated service lives and which disregard Hope's actual experience on depreciation and salvage and which have no foundation in fact, and applied hypothetical annual depletion calculations to the construction costs of a large portion of Hope's field lines which are subject only to depreciation and not to depletion;

(d) The Commission erroneously made no provision in operating expenses for the substantial actual expense incurred by Hope in abandoning its wells and other property actually abandoned since January 1, 1939 or for such actual expense as it will be incurred by Hope in substantial amounts in the future period for which the Commission ordered new rates, and erroneously requires Hope to pay such expenses from the cash or property previously acquired by Hope or from the return which the Commission purported to allow it for such period and the future;

(e) The Commission erroneously failed to include in Hope's 1940 operating expenses $165,963 actually expended by Hope in that year for a deep test well which proved nonproductive;

(f) The Commission erroneously allowed for the return to Hope on its West Virginia distribution properties only 6½ per cent upon the book cost of said properties less Hope's book depreciation reserve therefor, thus committing in respect of said distribution properties the errors committed in respect of Hope's interstate properties as set forth in Points 1 to 6 and 8 to 19, inclusive, above, and erroneously assuming, contrary to fact and without evidence, that Hope's book depreciation reserve for said properties measured the depreciation therein, and erroneously allowed as the annual depreciation allowance for such property only Hope's book depreciation charge, in lieu of allowing for such return and depreciation a total amount of not less than $250,000 per year;

(g) The Commission erroneously eliminated $16,455 from Hope's actual 1939 operating expenses and $16,882 from its actual 1940 operating expenses primarily for estimated property taxes allocated by the Commission to Hope's coke oven gas lines, although the evidence showed that Hope's total property taxes would have been the same irrespective of its ownership and operation of these lines;

(h) The Commission erroneously failed to make any allowance for interest upon Hope's reclassification and rate case expenses whose reimbursement to Hope the Commission deferred over a period of ten years, nor did it allow any provision in Hope's working capital in lieu of such interest provision;

(i) The Commission in calculating its claimed "Income Tax Saving" under the interstate rates prescribed by it erroneously overlooked, disregarded and neglected to take into account the fact that under the United States Internal Revenue Code the income tax depletion deductions which would be allowed Hope under the reduced rates prescribed by the Commission would decrease by at least one-third, thus, on the Commission's own theories, increasing the federal income tax payable by Hope in the future from the $76,579 allowed by the Commission to at least $379,696 and decreasing the so-called "Income Tax Saving" and the total amount of rate reduction calculated by the Commission by $303,117;

(j) The Commission further erroneously overlooked, neglected and failed to take into account the fact that the future federal income tax rate upon the earnings of Hope Construction & Refining Company will be at least 40 per cent instead of the actual tax rates in past years which the Commission reflected in its future credit for so-called excess profits from the gasoline and butane extracted by said company; and

(k) The Commission in using Hope's 1940 operating expenses, as adjusted by it, in fixing rates for the future made the errors specified in Point 19 above and further and erroneously failed to adjust Hope's operating expenses upward by at least $2,000,000 to reflect the fact that Hope's own production system can not supply during the period for which the Commission ordered new rates the volumes of gas produced therefrom in 1940, and otherwise failed to allow Hope sufficient amounts in its future oper-

ating expenses to explore for and produce, or to purchase, the abnormal quantities of gas which if has been called upon to deliver in 1940 and since and whose continued sale the Commission assumes in fixing the future rates ordered by it.

## PART B

## As To The Commission's "Findings As To Lawfulness Of Past Rates":

### Point 22.

The Commission exceeded the power and authority delegated to it by the Natural Gas Act by making its said "Findings As To Lawfulness Of Past Rates" and erroneously determined that it had such jurisdiction and authority and that such findings are in the public interest (*Finding (2) of said "Findings"; fifth, ninth and succeeding sentences under heading "Lawfulness of Past Rates" of Opinion No. 76*).

### Point 23.

The Commission erroneously construed the Natural Gas Act to mean that it had power and authority to determine that rates and charges contained in Hope's schedules filed with it in 1938, and which for that year on the basis of the Commission's theories and findings as adopted and applied in its said findings and orders failed by more than $1,170,000 to produce a 6½ per cent return on the rate base found by the Commission, became unjust, unreasonable and unlawful in any subsequent year in which they produced any amount in excess of said return on said rate base; and that it had power and authority to fix as the only, just, reasonable and lawful rate and charge for any past year the amount which would have produced precisely such return in such year had such rate or charge actually been in effect in such year. The Commission in said "Findings" rigorously applied this erroneous construction.

**Point 24.**

The Commission in said "Findings" erred in not finding that the rates charged and received by Hope for the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption were, and in the future would be, just and reasonable and erred in finding (a) that said rates were unjust, unreasonable and excessive, and therefore unlawful, to the extent of $920,029 for the year 1939, $4,210,154 for the year 1940, and $3,609,857 since 1940 (on an annual basis) as set forth in finding (21); (b) that the total required revenue for all interstate service of Hope was for said years as set forth in finding (22); (c) that the just, reasonable and lawful rates for natural gas sold by Hope to The East Ohio Gas Company were those required to produce compensation in the amounts for said years set forth in finding (23); and (d) that the rates charged and received by Hope for the transportation and sale of natural gas to The East Ohio Gas Company were unjust, unreasonable, excessive, and therefore unlawful, to the extent of $830,892 during 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940 as set forth in finding (24). In making said findings:

(a) The Commission proceeded unlawfully, exceeded its statutory and constitutional powers and erroneously construed the terms and provisions of the Natural Gas Act as set forth in Points 1, 2, 3, 4, 5, 6, 22 and 23 above;

(b) The Commission acted arbitrarily, unreasonably and without support in the evidence and erroneously incorporated, reflected and relied upon the erroneous findings and conclusions set forth in Points 25 to 27 below; and

(c) The Commission found rates and charges unjust, unreasonable and excessive, and therefore unlawful, as set forth in said findings (21) and (24), which permitted Hope to earn no more than the just compensation for the use of its property in public service, and the fair return on the

present fair value of its property, to which it is entitled under Amendment V to the Constitution of the United States; and in finding the total required revenue for all interstate service of Hope and that just, reasonable and lawful rates for natural gas sold by Hope to The East Ohio Gas Company were no more than those required to produce compensation in the amounts set forth in said findings (22) and (23), the Commission determined rates, required revenue and compensation which, if anywhere recognized or enforced, will deprive Hope of its property without due process of law and take such property for public use without just compensation in violation of said Amendment V, by reason of which said findings (21) to (24), inclusive, are unconstitutional and void.

## Point 25.

With respect to findings (7), (8), (9), (10), (11), (12), (13), (14), (15), (16) and (19) of said "Findings" the Commission erred as to each to the extent, in the manner and for the reasons hereinbefore specified for the same or similar findings in said "Order Reducing Rates" and reference is hereby made to such of the above Points as are listed below as designating the several specific grounds of error urged as an objection by Hope to each and every such erroneous findings. The above Points so referred to, which are here incorporated as if here fully rewritten, relate to said erroneous findings as follows:

| Finding | Points Above Here Referred to and Incorporated |
|---|---|
| (7) | 8 |
| (8) | 9 |
| (9) | 10 |
| (10) | 10 |
| (11) | 11 |
| (12) | 12 and 13 |
| (13) | 14 |
| (14) | 15 |
| (15) | 16 and 17 |
| (16) | 18 |
| (19) | 20 |

**Point 26.**

The Commission erroneously found that Hope's actual operations for 1939 and 1940, respectively, are the reasonable and proper bases for determining lawful rates in each of those years, and that 1940 operations, as adjusted, are the reasonable and proper basis for determining lawful rates since 1940 as set forth in finding (17) of said "Findings." The Commission should have found, and erred in not finding, that the average of operations for the years 1937 to 1939, inclusive, or at most 1937 to 1940, inclusive, was a proper basis for determining lawful rates for the years 1938 to the present and for each of such years. The Commission further erred in disregarding the actual operations of Hope under its existing rates during the year 1938, upon the basis of which it would have found, applying all of its own theories, findings and conclusions as set forth in its said findings and orders, that the rates charged by Hope for its interstate service in 1938 were just and reasonable and failed to yield the fair annual return to which Hope was entitled by $1,170,534, and that the rates charged by Hope to The East Ohio Gas Company in 1938 failed to yield the compensation to which Hope was entitled by $817,588. The Commission further erred in unlawfully disregarding and in effect overruling its order of December 20, 1940, denying the motion of complainants, the Cities of Cleveland and Akron, for an immediate order reducing the rates of Hope to The East Ohio Gas Company. Said findings, said failure to make such findings, and such disregarding of actual operations and of its own previous order, and each of them, are arbitrary, unreasonable and unlawful and reflect the errors specified in Points 22 and 23 above.

**Point 27.**

The Commission erroneously made the findings as to the reasonable and proper allowances for Hope's operating expenses set forth in finding (20) of said "Findings" and in the paragraphs, tables and pages of said Opinion No. 76 referred to in Point 21 above. Said findings, the Commission's failures to make the findings referred to in Point 21 above, and each of them, are erroneous upon the grounds set forth in Point 21 which is here incorporated as if here fully rewritten, and upon the following additional grounds:

(l) The Commission erroneously and without any basis whatsoever in the evidence determined that $27,244 of Hope's operating expenses for 1939 was applicable to prior years;

(m) The Commission erroneously, and contrary to its own pronouncement in finding (17) of said "Findings," calculated past rates upon the theory that Hope paid only $39,716 federal income tax in 1939 and none whatsoever in 1940, although in fact it paid $191,521 in 1939 and $912,313 in 1940 as shown by the Commission's second tabulation under the heading "Operating Expenses Summary" of Opinion No. 76; and further erroneously assumed that had the Commission's past rates been in effect Hope would have paid only $39,716 federal income tax in 1939 and none whatsoever in 1940, whereas it would have paid substantial amounts even had said past rates been in effect by reason of the reduced income tax depletion deductions to which it would have been entitled under the United States Internal Revenue Code as set forth in Point 21 above.

WHEREFORE, Hope respectfully prays for relief as set forth above.

HOPE NATURAL GAS COMPANY,

By WILLIAM B. COCKLEY,

WALTER J. MILDE,

THEODORE R. COLBORN,

STATE OF OHIO,
COUNTY OF CUYAHOGA, ss.

WALTER J. MILDE, being first duly sworn, says that he is attorney for Hope Natural Gas Company, a corporation, petitioner herein; that he is duly authorized in the premises; that he has read the foregoing Petition for Review; and that the matters and things therein stated are true as he verily believes.

WALTER J. MILDE.

SWORN TO before me and subscribed in my presence this July 16, 1942.

CATHERINE MARTIN,
*Notary Public.*

(Notarial Seal)

Same day, to-wit, July 18, 1942, notification to respondents of the filing of petition for review, together with a copy of the petition for review, transmitted by mail to Federal Power Commission, Washington, D. C.; City of Cleveland, Ohio; City of Akron, Ohio, and Pennsylvania Public Utility Commission, Harrisburg, Pennsylvania, respondents.

July 22, 1942, the appearance of William B. Cockley and William A. Dougherty is entered for the petitioner.

Same day, the appearance of A. F. O'Neil, Director of Law, and Clyde B. Macdonald, Assistant Director of Law, is entered for the respondent City of Akron, Ohio.

July 23, 1942, the appearance of Richard J. Connor, General Counsel, and Milford Springer, Counsel, is entered for the respondent Federal Power Commission.

Same day, the appearance of Kemble White is entered for the petitioner.

July 24, 1942, the appearance of Thomas A. Burke, Jr., Director of Law; Spencer W. Reeder, Assistant Director of Law in Charge of Utility Controversies; Robert E. May and Alex. W. Parker is entered for the respondent City of Cleveland, Ohio.

July 29, 1942, the appearance of Samuel Graff Miller; Harry M. Showalter; and Claude T. Reno, Attorney General, Commonwealth of Pennsylvania, is entered for the respondent Pennsylvania Public Utility Commission.

July 31, 1942, the appearance of Anthony F. McCue is entered for the petitioner.

August 28, 1942, the transcript of record is filed.

September 10, 1942, application of petitioner for special permission to file a brief exceeding 50 printed pages is filed.

September 12, 1942, order granting special permission to petitioner to file a brief in excess of 50 printed pages but not exceeding 215 printed pages is filed.

Same day, to-wit, September 12, 1942, motion of respondent, City of Cleveland, to dismiss Part B of Petition for Review is filed.

NOTE.—The motion to dismiss is in the words and figures following, to-wit:

## MOTION OF RESPONDENT, CITY OF CLEVELAND, TO DISMISS PART B OF PETITION FOR REVIEW.

The City of Cleveland, a respondent in the above entitled cause, moves this Honorable Court to dismiss Part B of the Petition for Review filed herein on the ground that the Court has no jurisdiction under Section 19(b) of the Natural Gas Act (52 Stat. 831; 15 U. S. C. A. 717r (b)) to review the "Findings as to Lawfulness of Past Rates" entered by respondent, Federal Power Commission, on May 26, 1942. These "findings" do not constitute an "order" within the meaning of Section 19(b) of the Natural Gas Act.

## BRIEF IN SUPPORT OF MOTION OF RESPONDENT, CITY OF CLEVELAND, TO DISMISS PART B OF PETITION FOR REVIEW.

### STATEMENT.

On May 26, 1942, the respondent, Federal Power Commission, acting upon complaint of respondent, City of Cleveland, and after investigation and hearing, made what the Commission called "Findings as to Lawfulness of Past Rates."

For the convenience of the Court, a copy of said Federal Power Commission "Findings as to Lawfulness of Past Rates," together with the opinion incorporated by reference in said findings, has been printed as an appendix hereto.

Petitioner erroneously dubs the Federal Power Commission's "Findings as of Lawfulness of Past Rates" an "order" (Petition for Review, pp. 1, 2, 8), incorrectly as-

serts that the Commission attempted to "fix" past rates (Petition for Review, p. 35, Point 23); and devotes six points and five pages of its Petition for Review under the caption "Part B—As to The Commission's 'Findings As To Lawfulness of Past Rates'" to a purported appeal from these findings. (Petition for Review, pp. 35-39, incl.; Points 22-27, incl.)

Relying upon the established law in this circuit that mere "findings" of the Federal Power Commission are not reviewable *Carolina Aluminum Company v. Federal Power Commission*, 97 F. (2d) 433 (1938) (C. C. A. 4), and believing that a natural gas company cannot make such findings reviewable by the colorable device of calling them an order when they are not an order, respondent, City of Cleveland, has filed this Motion to Dismiss Part B of the Petition for Review.

We have filed this motion for the purpose of expediting and shortening the briefing, argument and determination of the issues raised by Part A of the Petition for Review, relating to the Commission's order fixing rates for the future, said Part A being a subject matter over which the Court has unquestioned jurisdiction. The granting of this motion in advance of the merits will eliminate nearly one fourth of the points raised in the Petition for Review.

Although the City of Cleveland would be delighted to have this or any other tribunal rule upon the merits of these findings,—which we believe are fully supported by the evidence, wholly within the jurisdiction of the Commission, and not otherwise unlawful—nevertheless we recognize that jurisdiction of a Court cannot be created by consent of the parties and that absence of jurisdiction cannot be excused by waiver of the parties. *United States v. Griffin*, 303 U. S. 226, 229; *Houston Natural Gas Corp. v. Securities and Exchange Commission*, 100 F. (2d) 5 (C. C. A. 4th, 1938).

We believe that an early ruling on this motion will expedite the case of *East Ohio Gas Company v. Cleveland*, P. U. C. O. 11,001, 11,218 and 11,442, which has already been pending for more than three years before The Public Utilities Commission of Ohio. The Federal Power Commission's "Findings as to Lawfulness of Past Rates" were avowedly made at the request of and for use by the City of Cleveland as evidence in said proceeding before The Public Utilities Commission of Ohio against Hope's affiliate, The East Ohio Gas Company, and in support of Cleveland's claim for a $5,000,000 refund to its people, as ultimate consumers.

Since this case involves questions of great public interest, which ought not to be confused by consideration of a separate cause of action over which this Court has no jurisdiction, we respectfully request that this motion be set down for early oral argument and that it be disposed of in advance of the merits.

*History of the Federal Power Commission's "Findings as to Lawfulness of Past Rates."*

On May 26, 1942, as aforesaid, the respondent, Federal Power Commission, made its "Findings as to Lawfulness of Past Rates." (R. 14202.)

As the "findings" recite, they were made at the request of respondent, City of Cleveland, as an aid to state regulation. (Appendix, finding (1).)

The ultimate "finding" is that (Appendix, finding (24)):

> "(24) The rates charged and received by the Hope Natural Gas Company for the transportation and sale of natural gas in interstate commerce to The East Ohio Gas Company for resale for ultimate public consumption were unjust, unreasonable, excessive, and therefore unlawful to the extent of $830,893 during 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940."

The history of these "findings" is set forth in the opinion of the respondent, Federal Power Commission, as follows:

"LAWFULNESS OF PAST RATES:

"In 1938 the Cities of Cleveland and Akron, Ohio, filed complaints with the Federal Power Commission alleging that the rate which Hope charged East Ohio Gas Company was unjust, unreasonable and unlawful. These complaints were registered before Hope filed its five interstate wholesale rate schedules which are involved in these proceedings. The acceptance of a rate schedule for filing does not mean that the Commission approves it, and does not establish the justness or reasonableness of the rate. *Re Home Gas Co.*, 39 P. U. R. (N. S.) 102, 109. On October 14, 1938, the Commission instituted an investigation of the reasonableness of all of Hope's interstate rates. If it had been possible to adduce the volume of evidence required for the disposition of such a complex matter within a few months, the Commission would have prescribed the reasonable interstate wholesale rates for 1939 and subsequent years. The City of Cleveland raised the issue of the lawfulness of the rate charged Hope to the East Ohio Gas Company and asked this Commission, as an aid to State regulation, to make a separate determination of the reasonable rates since June 30, 1939. Originally the City of Cleveland requested this Commission to find the lawful Hope-East Ohio rates since June 21, 1938, but it now represents that the subject is idle for rates prior to June 30, 1939, because those rates which Cleveland consumers were obligated to pay East Ohio have been settled. The Commission does not have the authority to fix rates for the past and to award reparations. But Congress did empower and instruct the Commission in Section 5(a) of the Natural Gas Act to fix future rates, and as a step in that process we must necessarily consider the reasonableness of past and existing rates. When the issue is raised and the public interest will be served, we consider as a necessary part of that duty the power to examine the entire rate problem involved and to determine what rates were lawful in the past. Also, Section 14(a) of the Act authorizes

the Commission to investigate any facts which it finds necessary in order to determine whether Hope has violated any provision of the Natural Gas Act. Furthermore, the Commission has power to perform any act pursuant to Section 16, which is necessary or appropriate to carry out the provisions of the Act. Under Section 4(a) of the Act any interstate wholesale rate that is not just and reasonable is unlawful. *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. ..... Hope's rate collected from East Ohio Gas Company was lawful after June 21, 1938, the effective date of the Act, only to the extent that it was just and reasonable. The City of Cleveland states that the Ohio Commission is investigating the reasonableness of the East Ohio Gas Company's bonded retail rates in Cleveland for the period since June 30, 1939, and that the lawfulness of Hope's rate is an important factor in the case. Since the enactment of the 1938 Natural Gas Act this Commission has had exclusive jurisdiction to determine the lawfulness of the interstate wholesale rates charged by Hope and other natural gas companies. (Sections 1, 2, 4 and 5(a). See *Missouri v. Kansas Natural Gas Co.*, 265 U. S. 298, 308; *Illinois Natural Gas Co. v. Central Illinois Public Service Co.*, 314 U. S. 498, 506; *Kentucky Nat. Gas Corp. v. P. S. C.*, 28 F. Supp. 509, 513, aff 119 Fed. (2d) 417.)

"In response to the request of the City of Cleveland, the Commission will make the appropriate findings of fact as to the lawfulness of the rates charged East Ohio by Hope since June 30, 1939. The Interstate Commerce Commission has furnished precedents for the performance of this public duty. (*W. A. Barrows Porcelain Enamel Co. v. Cushman Motor Delivery Co.*, 11 M. C. C. 365, 366; *Dixie Mercerizing Co. v. ET & WNC Motor Transp. Co.*, 21 M. C. C. 491, 492. See *United States v. Morgan*, 307 U. S. 183, 313 U. S. 409; *Lima Tel. Co. v. P. U. C.*, 98 O. S. 110, 120 N. E. 330.) Congress intended that this Commission cooperate with State Commissions and municipalities, and the provisions of Sections 5(b) and 17 are special evidence of such intent."

At the oral argument before respondent, Federal Power Commission, counsel for petitioner conceded that such findings as to lawfulness of past rates are nonappealable, as follows (Milde, R. 14179):

> "We cannot appeal from any recital you make that the rates *were* unreasonable and unlawful in 1916 or 1928 or 1938, or any other time."

This concession was not one improvidently made in the heat of argument. Prior to the oral argument counsel for petitioner filed a printed memorandum with the Federal Power Commission, wherein they said ("Memorandum on Behalf of Hope Natural Gas Company as to the Commission's Jurisdiction in these Proceedings to Adjudge that the Company has in the past Violated the Natural Gas Act," p. 6n):

> "Section 19(b) of the Act does not authorize review of determinations by the Commission even as important as a determination that a company is a natural gas company under the Act. This Commission has so argued before all courts in which this matter has come up and it has been sustained in this construction. *Canadian River Gas Co. v. Federal Power Commission*, 110 F. (2d) 350, 113 F. (2d) 1010 (C. C. A. 10th, 1940); *New York State Natural Gas Corporation v. Federal Power Commission* (C. C. A. 2d, October 26, 1939, not reported); Cf. *East Ohio Gas Company v. Federal Power Commission*, 115 F. (2d) 385 (C. C. A. 6th, 1940)."

Nevertheless, on July 18, 1942, counsel for petitioner filed with this Court a pretended appeal from the Federal Power Commission's "Findings as to Lawfulness of Past Rates." (Petition for Review, Part B, pp. 35-39.)

*Applicable Statute.*

The only applicable statute is the Natural Gas Act Section 19(b), which provides (52 Stat. 831; 15 U. S. C. A. 717r (b)):

"(b) Any party to a proceeding under this chapter aggrieved by an *order* issued by the Commission in such proceeding may obtain a review of such *order* in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the *order* relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the *order* of the Commission upon the application for rehearing, a written petition praying that the *order* of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the *order* complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such *order* in whole or in part. No objection to the *order* of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original *order*. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such *order* of the

Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 346 and 347 of Title 28, as amended." (Italics ours.)

*Preliminary Analysis.*

Under the Natural Gas Act Section 19(b), this Court has jurisdiction to review only "orders" of the Federal Power Commission. It has no jurisdiction to review mere findings.

The "Findings as to Lawfulness of Past Rates" from which petitioner attempts to appeal in Part B of the Petition for Review are not an order. They are findings.

These "findings" are not the basis of the Commission's order fixing rates for the future. That order is based on other findings which are attacked in Part A of the Petition for Review. Under the Natural Gas Act, the only finding that is necessary to a rate reduction order is the finding that the existing rate "*is* unjust, unreasonable, unduly discriminatory, or preferential." Natural Gas Act Section 5(a); 15 U. S. C. A. Section 717d; 52 Stat. 823. In this case, the Federal Power Commission's rate reduction order, fixing future rates, is based solely upon the findings incorporated therewith. Therefore, a consideration of the Federal Power Commission's "Findings as to Lawfulness of Past Rates" is not necessary in testing the reasonableness of the rate reduction order attacked in Part A of the Petition for Review. The Federal Power Commission's order fixing rates for the future which is attacked in Part A of the Petition for Review is not based upon the Federal Power Commission's "Findings as to Lawfulness of Past Rates."

The Federal Power Commission's "Findings as to Lawfulness of Past Rates" neither direct nor restrain any action on the part of petitioner. They neither command nor direct anything to be done. They carry no direction of

obedience to any previously formulated order of the Commission.

These "findings" are determinations of fact. They are not in substance an order. They are not even in form an order. They have no characteristic of an order, either affirmative or negative. They are only a decision on a controverted matter. These findings are a report—an opinion as distinguished from a mandate.

These findings may be evidence in another proceeding of a breach of statutory duty on the part of petitioner. But the Act imposed the duty. The "findings" do not.

The mere fact that these "findings" may be used as evidence against petitioner or its affiliate in another proceeding does not make them reviewable in this one.

Assuming arguendo that they are binding in another proceeding as between parties to the case below and their privies, unless unsupported by substantial evidence, outside the jurisdiction of the Commission, or otherwise unlawful, the "findings" are subject to challenge in such other proceeding on all these grounds, and petitioner or its privies will have their day in court when and if the findings are offered in evidence against them.

In the Natural Gas Act, Congress has distinguished carefully between orders, which it makes reviewable, and mere determinations, findings, and reports, which it does not make reviewable.

In the body of the statute, for example, Congress specifically mentions "orders" fixing future rates (Natural Gas Act, Section 5(a)); "orders" determining accounts in which particular outlays shall be entered, charged, or credited (Natural Gas Act, Section 8(a)); "orders" authorizing exporting or importing natural gas to or from a foreign country (Natural Gas Act, Section 3); "orders" requiring refund of proposed increased rates collected under bond (Natural Gas Act, Section 4(e)); "orders" directing a natural gas company to extend or improve its transporta-

tion facilities (Natural Gas Act, Section 7(a)); "orders" directing a natural gas company to establish physical connection of its transportation facilities with the facilities of, and to sell natural gas to, any person or municipality engaged or legally authorized to engage in the local distribution of natural gas or artificial gas to the public (Natural Gas Act, Section 7 (a)). Congress has authorized this Court to review such orders (Natural Gas Act, Section 19(b)).

On the other hand, in the body of the Natural Gas Act, Congress has referred to many determinations, reports, and findings, which it purposefully does not call "orders." For example, there is the determination of cost of production or transportation of natural gas by a natural gas company in cases where the Federal Power Commission has no authority to establish a rate governing the transportation or sale of such natural gas (Natural Gas Act, Section 5(b)). There are reports to Congress on information assembled relative to proposed interstate compacts dealing with the conservation, production, transportation, or distribution of natural gas (Natural Gas Act, Section 11(a)) and reports to Congress relative to operation of a compact between two or more states approved by Congress (Natural Gas Act, Section 11(b)). And there is the determination whether any person has violated or is about to violate any provision of the Act or any rule, regulation or order thereunder (Natural Gas Act, Section 14(a)). These findings, determinations, and reports Congress did not authorize the Circuit Courts of Appeals to review (Natural Gas Act, Section 19(b)).

Part B of the Petition for Review should be dismissed because it seeks review of mere "findings." Under Section 19(b) of the Natural Gas Act, it is only an order of the Federal Power Commission and not a finding that this Court is authorized to review.

## ARGUMENT.

### PETITIONER'S PRETENDED APPEAL FROM THE FEDERAL POWER COMMISSION'S "FINDINGS AS TO LAWFULNESS OF PAST RATES," SET FORTH IN PART B OF THE PETITION FOR REVIEW, SHOULD BE DISMISSED BECAUSE UNDER THE NATURAL GAS ACT SECTION 19(b) IT IS ONLY AN "ORDER" AND NOT A FINDING OF THE COMMISSION WHICH THIS COURT IS AUTHORIZED TO REVIEW.

### A. The Commission's "Findings as to Lawfulness of Past Rates" are what the Commission called them—mere findings.

In *Carolina Aluminum Company v. Federal Power Commission*, 97 F. (2d) 435 (1938), (Parker, Circuit Judge), this Court declined to review a mere "finding" of the Federal Power Commission. Holding that Section 313(b) of the Federal Power Act, which is substantially identical with Section 19(b) of the Natural Gas Act, does not authorize review of a mere finding of the Federal Power Commission that the interests of interstate or foreign commerce would be affected by the proposed construction of a hydroelectric power project, this Court said at page 436:

"(1-3) The only statute under which we are given power to review actions of the commission is Sec. 313(b) of the Federal Power Act, 49 Stat. 860, 16 U. S. C. A. § 825*l*(b), the pertinent portion of which is as follows:

"'Any party to a proceeding under this Act (chapter) aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the Circuit Court of Appeals * * * by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the rec-

ord upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive.'

"It will be noted that it is an order and not a finding of the Commission which the court is authorized to review; and there would seem to be little room for doubt that by an order is meant some command of the Commission directing or restraining action or granting or denying some form of relief. An 'order' is a 'mandate, precept; a command or direction authoritatively given; a rule or regulation.' *Black's Law Dictionary*; 46 *C. J.* 1131; 42 *C. J.* 464. An order of the Commission is analogous to the judgment of a court; and it is well settled that findings constitute no part of a judgment even though incorporated in the same instrument with it. 15 *R. C. L.* 570; *Judge v. Powers*, 156 Iowa 251, 136 N. W. 315, Ann. Cas. 1915B, 280. As said by Judge Learned Hand in *Eckerson v. Tanney*, D. C., 235 F. 415, 418, 'The judgment itself does not reside in its recitals, but in the mandatory portions.' In reviewing an order the court may examine the findings to determine whether they support the order and may examine the evidence to determine whether it supports the findings; but the court is given no authority to review a mere finding upon which no order is based, even though it may determine a status which may form the basis of future governmental action, for even such a finding lacks the fundamental characteristics of an order. *Shannahan v. United States*, 58 S. Ct. 732, 82 L. Ed. ....; *United States v. Griffin*, 58 S. Ct. 601, 82 L. Ed. ....; *Piedmont & N. R. Co. v. United States*, 280 U. S. 469, 50 S. Ct. 192, 74 L. Ed. 551; *United States v. Los Angeles & Salt Lake R. Co.*, 273 U. S. 299, 47 S. Ct. 413, 71 L. Ed. 651; *Lehigh Valley R. Co. v. United States*, 243 U. S. 412, 37 S. Ct. 397, 61 L. Ed. 819; *Brady v. Interstate Com-*

*merce Commission*, D. C., 43 F. 2d 847, affirmed *Brady v. United States*, 283 U. S. 804, 51 S. Ct. 559, 75 L. Ed. 1424."

Similarly, in *Shannahan v. United States*, 303 U. S. 596 (1938) (Mr. Justice Brandeis), the Supreme Court of the United States held that a finding of the Interstate Commerce Commission that "the Chicago, South Shore and South Bend Railroad is not a street, interurban or suburban electric railway within the meaning of the exemption proviso in the first paragraph of Section 1 of the Railway Labor Act, as amended June 21, 1934, and it is therefore subject to the provisions of that act," was not reviewable as an "order" within the meaning of the Urgent Deficiencies Act. Mr. Justice Brandeis, speaking for the court, said (303 U. S. 599, 601):

(p. 599) "The Commission intervened. Its answer, and that of the United States, challenged the jurisdiction of the court on the ground that the determination of the Commission was not an 'order' within the meaning of the Urgent Deficiencies Act. The case was heard before three judges on the pleadings and evidence; and a decree was entered dismissing the bill for want of jurisdiction, one judge dissenting. 20 F. Supp. 1002. The Trustees appealed.

"*First.* The function of the Commission is limited to the determination of a fact. Its decision is not even in form an order. It 'had no characteristic of an order, affirmative or negative.' *United States v. Illinois Cent. R. Co.*, 244 U. S. 82, 89; *United States v. Atlanta, B. & C. R. Co.*, 282 U. S. 522, 527-28. *Compare Lehigh Valley R. Co. v. United States*, 243 U. S. 412, 414. But even if this difficulty is overlooked, others are insuperable. The decision neither commands nor directs anything to be done. 'It was merely preparation for possible action in some proceeding which may be instituted in the future.' *United States v. Los Angeles & S. L. R. Co.*, 273 U. S. 299, 310. The determination is thus not enforceable by the Commission; the only action which could ever be taken on it would be by some other body. • • •

(p. 601) "In order not to fail in the performance of these duties the Mediation Board had to satisfy itself whether the South Shore was a railroad within the exemption proviso. To that end, it applied to the Commission for its determination. If it had omitted to do so, the application might have been made 'upon complaint of any party interested.' The determination whether applied for by the Board, by a carrier, or by employees, is clearly not an order enforceable within the meaning of the cases construing and applying the Urgent Deficiencies Act. It is a decision on a controverted matter, comparable to those considered in *United States v. Los Angeles & Salt Lake R. Co.*, 273 U. S. 299, in *Great Northern Ry. Co. v. United States*, 277 U. S. 172, in *United States v. Atlanta, B. & C. R. Co.*, 282 U. S. 522, and in *United States v. Griffin, ante*, p. 226, which were held not to be subject to review under the Urgent Deficiencies Act."

Again, in *Shields v. Utah Idaho Central Railroad Company*, 305 U. S. 177 (1938) (Mr. Chief Justice Hughes), the Supreme Court of the United States reaffirmed the doctrine that a mere finding that a carrier is not an interurban railway and therefore is not exempt from the operation of the Railway Labor Act is not an order and is not reviewable under the Urgent Deficiencies Act. Mr. Chief Justice Hughes, speaking for the Court, said (305 U. S. 177, 179, 182-183):

(p. 179) "The Railway Labor Act, which applies to railroads engaged in interstate commerce, excepts any 'interurban' electric railway unless it is operating as a part of a general steam-railroad system of transportation. The Interstate Commerce Commission is 'authorized and directed upon request of the Mediation Board or upon complaint of any party interested to determine after hearing whether any line operated by electric power' falls within the exception. At the request of the Mediation Board, the Interstate Commerce Commission after hearing determined that the lines of respondent, the Utah Idaho Central Railroad Company, do not constitute an interurban electric railway. 214 I. C. C. 707. * * *

(pp. 182-183) "We have held that the determination of the Commission is not an '*order*' reviewable under the Urgent Deficiencies Act of October 22, 1913. *Shannahan v. United States, supra.* * * *"

In *Canadian River Gas Company v. Federal Power Commission*, 110 F. (2d) 350 (1940) (C. C. A. 10) (Phillips, Circuit Judge), the Circuit Court of Appeals for the Tenth Circuit held that a mere finding by the Federal Power Commission that the Canadian River Gas Company is a natural gas company within the meaning of the Natural Gas Act, is not reviewable under Section 19(b) of the Act, even though the finding was accompanied by a preliminary, interlocutory, and interim order. The court said at page 352:

"Sec. 717r (b) provides that any party to a proceeding under the Natural Gas Act aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the Circuit Court of Appeals of the United States for any circuit wherein the natural gas company to which the order relates is located or has its principal place of business, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part.

"It will be observed that the order of March 14, 1939, finds that the companies are natural gas companies within the meaning of the Natural Gas Act, and that it is necessary and proper, in the public interest, and to aid in the enforcement of the Natural Gas Act, that an investigation be instituted by the Commission, on its own motion, into and concerning rates, charges, classifications, rules, regulations, practices, and contracts of such companies, and orders that an investigation of such companies 'be and is hereby instituted.'

"It is in no proper sense a definitive order. Rather, it is a mere step in procedure. It neither commands nor inhibits any action on the part of the companies.

Furthermore, no orders theretofore made by the Commission respecting the companies remained unexecuted. They had fully complied with general orders Nos. 51 and 53."

In denying the rehearing on its order of dismissal, the Circuit Court of Appeals for the Tenth Circuit further said in *Canadian River Gas Company v. Federal Power Commission*, 113 F. (2d) 1010 (C. C. A. 10) (1940) (Phillips, Circuit Judge), at pages 1012-1013:

"It is true that order No. 51 of the Commission directed an investigation to determine what persons are natural gas companies within the meaning of the Natural Gas Act and it is urged that the finding in the order of March 14, 1939, was the culmination of that proceeding and in effect commands obedience by the companies with the provisions of the Natural Gas Act. We do not so regard the finding sought to be reviewed. It was made in the order of March 14, 1939, ordering an investigation. It was nothing more than a preliminary finding in a proceeding in which a definitive order has not yet been entered. As stated in our former opinion, 110 F. 2d 350, 352, 'It is a mere step in procedure. It neither commands nor inhibits any action on the part of the companies.'

"Counsel for the companies urge that the question of jurisdiction by virtue of the challenged finding will become *res judicata* and that they will be estopped from challenging the Commission's jurisdiction in any proceeding to review a future order of the Commission. The attitude taken by the Commission in this proceeding and our decision precludes that eventuality."

To the same effect is *New York State Natural Gas Company v. Federal Power Commission* (C. C. A. 2nd, October 26, 1939, unreported), where it was held that a mere finding of the Federal Power Commission that the New York State Natural Gas Company is a "natural gas company" within the meaning of the Natural Gas Act, is

not reviewable under Section 19(b) of the Act, even though accompanied by an interim, procedural and interlocutory order. The decision of the Circuit Court of Appeals for the Second Circuit, sustaining the Federal Power Commission's motion to dismiss follows:

> "Petition for review dismissed on the authority *Federal Power Commission v. Metropolitan Edison Company*, 304 U. S. 375, and *Rochester Telephone Company v. United States*, 307 U. S. 125."

Again, in *East Ohio Gas Company v. Federal Power Commission*, 115 F. (2d) 385 (1940) (C. C. A. 6th) (Simons, Circuit Judge), the Circuit Court of Appeals for the Sixth Circuit held that a mere determination of the Federal Power Commission that The East Ohio Gas Company is a natural gas company within the meaning of the Natural Gas Act, is not reviewable under Section 19(b) of the Act, even though the determination is accompanied by a preliminary, procedural, and interlocutory order. The Court said at pages 388-389:

> "(3-5) The order here sought to be reviewed declares the status of the petitioner as a natural gas company, but such status does not necessarily or immediately carry a direction of obedience to any mandatory order applicable to all having such status. The petitioner seeks to bring itself within the rationalization of the Rochester decision (*Rochester Telephone Corporation v. United States*, 307 U. S. 125), by the contention that the Commission's order No. 51 becomes binding upon it by virtue of the Commission's determination of its status, and by the asserted inference that the Commission has under contemplation and will make other general orders applicable to all natural gas companies. But General Order No. 51 has already been complied with by the petitioner—it is no longer the subject of controversy—and mere expectation that other orders of the Commission may follow does not presently impose upon the petitioner any necessary or immediate mandate which, under the reasoning of the

*Rochester* case, makes determination of status reviewable. * * *"

In *Federal Power Commission v. Metropolitan Edison Company*, 304 U. S. 375 (1938) (Mr. Chief Justice Hughes), the Chief Justice said at page 385:

"* * * A final report by the Commission on value under sec. 19a of the Interstate Commerce Act, though called an order, is not reviewable. *United States v. Los Angeles & Salt Lake R. Co.*, *supra*. Compare *United States v. Atlanta, B. & C. R. Co.*, 282 U. S. 522, 527; *Great Northern Ry. Co. v. United States*, 277 U. S. 172, 181, 182; *United States v. Griffin*, 303 U. S. 226; *Shannahan v. United States*, 303 U. S. 596. * * *"

In the leading case of *United States v. Los Angeles and Salt Lake Railroad Company*, 273 U. S. 299 (1927) (Mr. Justice Brandeis), Mr. Justice Brandeis, speaking for the court, pointed out that a finding of valuation by the Interstate Commerce Commission, even though called an order, is not reviewable merely because it may be prima facie evidence of the facts found in some other proceeding before a court or commission. Mr. Justice Brandeis said at pages 309-312:

"The so-called order here complained of, is one which does not command the carrier to do, or to refrain from doing, any thing; which does not grant or withhold any authority, privilege or license; which does not extend or abridge any power or facility; which does not subject the carrier to any liability, civil or criminal; which does not change the carrier's existing or future status or condition; which does not determine any right or obligation. This so-called order is merely the formal record of conclusions reached after a study of data collected in the course of extensive research conducted by the Commission, through its employees. It is the exercise solely of the function of investigation. Compare *Smith v. Interstate Commerce Commission*, 245 U. S. 33. Moreover, the investigation made was not a step in a pending proceeding in which an order of the character of those hereto

be judicially reviewable could be entered later. It was merely preparation for possible action in some proceeding which may be instituted in the future—preparation deemed by Congress necessary to enable the Commission to perform adequately its duties, if and when occasion for action shall arise. The final report may, of course, become a basis for action by the Commission, as it may become a basis for action by Congress or by the legislature or an administrative board of a State. But so may any report of an investigation, whether made by a committee of Congress or by the Commission pursuant to a resolution of Congress or of either branch thereof.

"The Valuation Act requires that the investigation and study be made of the properties of each of the rail carriers. There are about 1800. 40 Annual Report Interstate Commerce Commission, 13. In directing the Commission to investigate the value of the property of the several carriers, Congress prescribed in detail the subjects on which findings should be made, and constituted the 'final valuations' and 'the classification thereof' *prima facie* evidence, in controversies under the Act to Regulate Commerce. Every party in interest is, therefore, entitled to have and to use this evidence; and the carrier, being a party in interest, has the remedy by mandamus to compel the Commission to make a finding on each of the subjects specifically prescribed. *Kansas City Southern Ry. Co. v. Interstate Commerce Commission*, 252 U. S. 178. But Congress did not confer upon the courts power either to direct what this 'tribunal appointed by law and informed by experience,' *Illinois Central Ry. Co. v. Interstate Commerce Commission*, 206 U. S. 441, 454, shall find, or to annul the report, because of errors committed in making it. Moreover, errors may be made in the final valuation of the property of each of the nearly 1800 carriers. And it is at least possible that no proceeding will ever be instituted, either before the Commission or a court, in which the matters now complained of will be involved or in which the errors alleged will be of legal significance.

"The mere fact that Congress has, in terms, made 'all final valuations * * * and the classification thereof * * * *prima facie* evidence of the value of the property in all proceedings under the Act to Regulate Commerce * * * in all judicial proceedings for the enforcement of the Act * * * and in all judicial proceedings brought to enjoin, set aside, annul, or suspend, in whole or in part, any order of the Interstate Commerce Commission" is, obviously, not a violation of the due process clause justifying proceedings to annul the order. That to make the Commission's conclusions *prima facie* evidence in judicial proceedings is not a denial of due process, was settled by *Meeker v. Lehigh Valley R. R. Co.*, 236 U. S. 412, 430, 431. It was there said of a like provision relating to reparation orders: 'This provision only establishes a rebuttable presumption. It cuts off no defense, interposes no obstacle to a full contestation of all the issues, and takes no question of fact from either court or jury. At most therefore it is merely a rule of evidence.' See also *Mills v. Lehigh Valley R. R. Co.*, 238 U. S. 473, 481-482; *St. Louis Southwestern Ry. Co. v. United States*, 264 U. S. 64, 77.

"Nor does the fact that 'all final valuations * * * and the classifications thereof' are made *prima facie* evidence prevent the report from being solely an exercise of the function of investigation. Data collected by the Commission as a part of its function of investigation, constitute ordinarily evidence sufficient to support an order, if the data are duly made part of the record in the case in which the order is entered. See *Interstate Commerce Commission v. Louisville & Nashville R. R. Co.*, 227 U. S. 88, 93; *Chicago Junction Case*, 264 U. S. 258, 262; *United States v. Abilene & Southern Ry. Co.*, 265 U. S. 274, 286-290; Act of June 18, 1910, c. 309, sec. 13, 36 Stat. 539, 555. Inquests and inquisitions, if they were expressly authorized, are, at common law, admissible in evidence in judicial proceedings, thus constituting an exception to both the hearsay rule and the rule against opinion evidence. 3 *Wigmore on Evidence* (2d ed.), secs. 1671-1674. Some inquests are at common law also *prima facie* evidence of the facts found. *Hughes v. Jones*, 116 N. Y. 67."

Assuming arguendo that the Federal Power Commission's findings as to lawfulness of past rates are binding upon the parties and privies to the Hope case in another proceeding before some court or commission, unless unsupported by evidence or otherwise unlawful, they are nevertheless not an order and not reviewable here or now. The Supreme Court has held that the mere fact that findings by the Interstate Commerce Commission are binding in another proceeding between the same parties before the Railway Mediation Board where they are subject to challenge only upon the ground that they are not supported by substantial evidence, does not make them an "order" subject to immediate judicial review. *Shields v. Utah Idaho Central Railroad Company*, 305 U. S. 177 (1938), *supra*; *Shannahan v. United States*, 303 U. S. 596, *supra*.

In the recent case of *American Federation of Labor v. National Labor Relations Board*, 308 U. S. 401 (1940) (Mr. Justice Stone), the Supreme Court held that a certification by the National Labor Relations Board that a particular labor organization of longshore workers is a collective bargaining representative of the employees in a designated unit, composed of numerous employers of longshore workers at Pacific Coast ports, was not reviewable as an "order" within the meaning of Section 10 (f) of the Wagner Act. Mr. Justice Stone, speaking for the Court, said at pages 408-412:

> "In analyzing the provisions of the statute in order to ascertain its true meaning, we attribute little importance to the fact that the certification does not itself command action. Administrative determinations which are not commands may for all practical purposes determine rights as effectively as the judgment of a court, and may be reexamined by courts under particular statutes providing for the review of 'orders.' See *Rochester Telephone Corp. v. United States*, 307 U. S. 125, 130, 135, *et seq.*; *Federal Power Comm'n v. Pacific Power & Light Co.*, 307 U. S. 156. We must

look rather to the language of the statute, read in the light of its purpose and its legislative history, to ascertain whether the 'order' for which the review in court is provided, is contrasted with forms of administrative action differently described as a purposeful means of excluding them from the review provisions.

"Here it is evident that the entire structure of the Act emphasizes, for purposes of review, the distinction between an 'order' of the Board restraining an unfair labor practice and a certification in representation proceedings. The one authorized by § 10 may be reviewed by the court on petition of the Board for enforcement of the order, or of a person aggrieved, in conformity to the procedure laid down in § 10, which says nothing of certifications. The other, authorized by § 9, is nowhere spoken of as an order, and no procedure is prescribed for its review apart from an order prohibiting an unfair labor practice. The exclusion of representation proceedings from the review secured by the provisions of § 10 (f) is emphasized by the clauses of § 9 (d), which provide for certification by the Board of a record of a representation proceeding only in the case when there is a petition for review of an order of the Board restraining an unfair labor practice. The statute on its face, thus indicates a purpose to limit the review afforded by § 10 to orders of the Board prohibiting unfair labor practices, a purpose and a construction which its legislative history confirms.

* * * * *

"An argument, much pressed upon us, is, in effect, that Congress was mistaken in its judgment that the hearing before the Board in proceedings under § 9 (c), with review only when an order is made under § 10 (c) directing the employer to do something 'provides an appropriate safeguard and opportunity to be heard.' House Rep. p. 23, and that 'this provides a complete guarantee against arbitrary action by the Board,' Sen. Rep., p. 14. It seems to be thought that this failure to provide for a court review is productive of peculiar hardships, which were perhaps not foreseen in cases where the interests of rival unions are affected. But

these are arguments to be addressed to Congress and not the courts. The argument too that Congress has infringed due process by withholding from federal appellate courts a jurisdiction which they never possessed is similarly without force. *Shannahan v. United States*, 303 U. S. 596; see *In re National Labor Relations Board*, 304 U. S. 486, 495.

"The Board argues that the provisions of the Wagner Act, particularly § 9 (d), have foreclosed review of its challenged action by independent suit in the district court, such as was allowed under other acts providing for a limited court review in *Shields v. Utah Idaho Central R. Co.*, 305 U. S. 177, and in *Utah Fuel Co. v. National Bituminous Coal Comm'n*, 306 U. S. 56; cf. *Myers v. Bethlehem Shipbuilding Corp.*, 303 U. S. 41. But that question is not presented for decision by the record before us. Its answer involves a determination whether the Wagner Act, in so far as it has given legally enforceable rights, has deprived the district courts of some portion of their original jurisdiction conferred by § 24 of the Judicial Code. It can be appropriately answered only upon a showing in such a suit that unlawful action of the Board has inflicted an injury on the petitioners for which the law, apart from the review provisions of the Wagner Act, affords a remedy. This question can be properly and adequately considered only when it is brought to us for review upon a suitable record."

Even if the Federal Power Commission had stated in its findings that it expected petitioner to pay back to its affiliate The East Ohio Gas Company the $8,200,000 which the Commission found Hope had overcharged East Ohio during the past 3½ years, as it did not, the Federal Power Commission's findings would still not be an order and would still not be reviewable. In *United States v. Atlanta, Birmingham and Coast Railroad Company*, 282 U. S. 522 (1931) (Mr. Justice Brandeis), the United States Supreme Court held that a report of the Interstate Commerce Commission which contained the following statement was not

an order and was therefore not reviewable under the Urgent Deficiencies Act:

> "'Upon consideration of the record, as supplemented, we find and conclude that the amount to be included in the balance sheet statement of the new company representing investment in road and equipment as of January 1, 1927, may not exceed $9,261,043.87. The company will be expected to adjust its accounts in accordance with this finding within 60 days from service of this report.'"

Mr. Justice Brandeis, speaking for the court, said at pages 527-528:

> "*First.* The jurisdiction conferred upon district courts under the Urgent Deficiencies Act is that formerly exercised by the Commerce Court over 'cases brought to enjoin, set aside, annul, or suspend in whole or in part any order of the Interstate Commerce Commission.' Act of June 18, 1910, c. 309, sec. 1, 36 Stat. 539. The action here complained of is not in form an order. It is a part of a report—an opinion as distinguished from a mandate. The distinction between a report and an order has been observed in the practice of the Commission ever since its organization—and for compelling reasons. Its functions are manifold in character. In some matters its duty is merely to investigate and to report facts. See *United States v. Los Angeles & Salt Lake R. Co.*, 273 U. S. 299, 310. In others, to make determinations. See *Great Northern Ry. Co. v. United States*, 277 U. S. 172. In some, it acts in an advisory capacity. Compare *Minneapolis & St. Louis R. Co. v. Peoria & Pekin Union Ry. Co.*, 270 U. S. 580, 584-5. In others in a supervisory. Even in the regulation of rates, as to which the Commission possesses mandatory power, it frequently seeks to secure the desired action without issuing a command. In such cases it customarily points out in its report what the carriers are expected to do. Such action is directory as distinguished from mandatory. No case has been found in which matter embodied in a report and not followed by a formal order has been held to be subject to judicial review. * * *"

Finally, in *Great Northern Railway Company v. United States*, 277 U. S. 172 (1928) (Mr. Justice Brandeis), the opinion of the Supreme Court points out that a finding of the Interstate Commerce Commission contained in a certificate issued by the Commission to the Secretary of the Treasury under Sectio.. 209, Transportation Act, 1920, setting forth the amount required of the United States to make good to a railroad company its guaranty of operating income during the six months following the termination of federal control, and stating also the aggregate amount theretofore certified, and thus showing (in this case) an overpayment by the government, is not an order. Mr. Justice Brandeis said at page 180:

> "Transportation Act, 1920, did not confer upon the Commission power to order anything in connection with the issue of the certificates. There is in the certificates no direction, no word of command. They are the recital of a finding of fact. * * *"

It is respectfully submitted that the Federal Power Commission's "Findings as to Lawfulness of Past Rates" are not reviewable because they are what the Commission called them—mere findings.

**B. The Federal Power Commission's "Findings as to Lawfulness of Past Rates" are not an "order."**

In *Louisville Gas and Electric Company v. Federal Power Commission*, 129 F. (2d) 126 (C. C. A. 6, June 29, 1942), the Circuit Court of Appeals for the Sixth Circuit held that it had jurisdiction to review orders of the Federal Power Commission which determined the original cost of the petitioner's property and in connection therewith directed the petitioner to establish accounting records and to conform its books and records to the Commission's determination of original cost. But the Court there distinguished that case from the case of a mere finding. The Court said at p. 131:

> * * * "So here the direction of the commission that the licensee establish accounts showing a debit balance in its fixed capital assets was an affirmative, determinative order directing action, *was more than a mere finding*, and its mandate entails more than a mere preservation of evidence. Compare *East Ohio Gas Company v. Federal Power Commission*, 6 Cir., 115 F. (2d) 385."

There is no claim here that the Federal Power Commission's "Findings as to Lawfulness of Past Rates" impose any duty upon petitioner to obey any unexecuted, previously formulated mandatory orders of the Federal Power Commission. The case is therefore clearly distinguishable from *Rochester Telephone Corporation v. United States*, 307 U. S. 125. As Phillips, Circuit Judge, said in *Canadian River Gas Company v. Federal Power Commission*, 110 F. (2d) 350, 352-353 (1940) (C. C. A. 10th), *supra*:

> "We think the case is distinguishable from *Rochester Tel. Corp. v. United States*, 307 U. S. 125, 59 S. Ct. 754, 764, 83 L. Ed. 1147. * * *
>
> "In the instant case, there were no unexecuted, previously formulated, mandatory orders, nor did the order of March 14, 1939, in itself direct or inhibit any action on the part of the companies. It can only adversely affect the rights of the Canadian Company and the Colorado Company on the contingency of future administrative action. * * *"

Nor is it claimed in this case that the Federal Power Commission's "Findings as to Lawfulness of Past Rates" impose any duty upon petitioner to obey any statutory regulations which interfere with its freedom of conduct, or that the Federal Power Commission's findings compel specific actions by the Company and prohibit other actions by it. The "findings" in the instant case determine no status. The case is therefore distinguishable from *Jersey Central Power and Light Company v. Federal Power Commission* (C. C. A. 3d) (May 25, 1942) (Biggs, Circuit Judge), 129 F. (2d) 183. In that case, the United States

Court of Appeals for the Third Circuit held a determination of the Federal Power Commission that Jersey Central was a public utility within the meaning of the Federal Power Act and that Jersey Power had acquired securities in violation of Section 203(a) of that act, reviewable as an "order." In holding the Federal Power Commission's determination reviewable under the *Rochester* case, 307 U. S. 125, *supra*, Biggs, Circuit Judge, said (p. 191):

> • • • "The 'Determination by the Commission' at bar is analogous to the orders in the second group described by Mr. Justice Frankfurter, orders imposing statutory obligations and prohibitions and it should follow that this court has jurisdiction to review the action of the Federal Power Commission which makes Jersey Central subject not only to statutory regulations which interfere with its freedom of conduct but compel specific actions by the Company and prohibit other actions by it."

Finally, these "findings" are wholly unlike an order promulgating general legislative rules and regulations having the force of law which require the Commission to refuse a corporation renewal of a license if it does not comply with the rules and regulations, thereby putting the party under duress to take immediate action. Cf. *Columbia Broadcasting System, Inc. v. United States*, . . . U. S. . . . , 86 L. Ed. (Advanced Opinion) 1066, 62 S. Ct. 1194 (June 1, 1942) (Mr. Chief Justice Stone) (Justices Frankfurter, Douglas and Reed, dissenting). In that case, where the Supreme Court held the order reviewable, Mr. Chief Justice Stone said at pages 1203-1204 of the Supreme Court Reporter:

> "We need not stop to discuss here the great variety of administrative rulings which, unlike this one, are not reviewable—either because they do not adjudicate rights or declare them legislatively, or because there are adequate administrative remedies which must be pursued before resorting to judicial remedies; or, be-

cause there is no occasion to resort to equitable remedies." * * *

We also respectfully call the attention of the Court to the following language in the dissenting opinion of Mr. Justice Frankfurter in the *Columbia Broadcasting* case (62 S. Ct. 1206, 1213-1214) which, apart from the moot question whether it stated the law upon the facts of that case, is clearly applicable here:

> "The criteria governing judicial review of 'orders' under the Urgent Deficiencies Act were defined by a unanimous Court in *United States v. Los Angeles & S. L. R. R.*, 273 U. S. 299, 309, 310, 47 S. Ct. 413, 414, 71 L. Ed. 651: 'The so-called order here complained of is one which does not command the carrier to do, or to refrain from doing, any thing; which does not grant or withhold any authority, privilege, or license; which does not extend or abridge any power or facility; which does not subject the carrier to any liability, civil or criminal; which does not change the carrier's existing or future status or condition; which does not determine any right or obligation.' If 'broadcasting company' were substituted for 'carrier,' this analysis of the legal consequences of the action of the Interstate Commerce Commission in the *Los Angeles* case would fit perfectly the legal consequences of the action of the Federal Communications Commission in making public the challenged regulations.
>
> "The fact that an action of an administrative agency occasions even irreparable loss does not in itself afford sufficient grounds for judicial review. Even if the Commission committed a wrong, the question of judicial reviewability still remains that put in the *Los Angeles* case, 273 U. S. at page 313, 47 S. Ct. page 416, 71 L. Ed. 651, to wit, it is 'a wrong for which Congress provides a remedy under the Urgent Deficiencies Act' of October 22, 1913, 38 Stat. 208, 219, 28 U. S. C. A. § 47, as incorporated in § 402 (a) of the Communications Act of 1934, 47 U. S. C. A. § 402 (a).
>
> "For Congress has not authorized resort to the federal courts merely because someone feels aggrieved.

however deeply, by an action of the Federal Communications Commission. A District Court of the United States can take a case only when Congress has authorized that type of case to be taken. Congress did not leave opportunity for reviewing damaging action by the Federal Communications Commission to the general equity powers of the district courts. It circumscribed the power of the courts in relation to the Commission in the most detailed way. Its incorporation by reference, in the Communications Act of 1934, 47 U. S. C. A. § 151 *et seq.*, of the scope of review allowed in reviewing an 'order' of the Interstate Commerce Commission gave all the precise, definite, and technical boundaries which the concept of a reviewable 'order' had acquired through the decisions of this Court prior to the enactment of the Communications Act. The precise requirements of an 'order' of the Commission for purposes of judicial review are therefore as inflexible as though they were written into the Act itself.

* * *

"Hardship there may well come through action of an administrative agency. But to slide from recognition of a hardship to assertion of jurisdiction is once more to assume that only the courts are the guardians of the rights and liberties of the people. In denying that it had power to review the action of the Federal Communications Commission because that body had not yet determined a legal right, the court below, as Judge Learned Hand's opinion abundantly proves, was not respecting a rule of etiquette. On the contrary, it merely recognized that the federal courts are entrusted with the correction of administrative errors or wrongdoing only to the extent of Congressional authorization. To say that the courts should reject the doctrine of administrative finality and take jurisdiction whenever action of an administrative agency may seriously affect substantial business interests, regardless of how intermediate or incomplete the action may be, is, in effect, to imply that the protection of legal interests is entrusted solely to the courts. The unbroken current of this Court's decisions, in con-

struing the scope of judicial review under the Urgent Deficiencies Act, and which is the only warrant for jurisdiction in this case, repels such a conclusion. The decision should therefore be affirmed."

It is respectfully submitted that the Federal Power Commission's "Findings as to Lawfulness of Past Rates" are not reviewable here because they are not an "order."

## CONCLUSION.

Since, the "Findings as to Lawfulness of Past Rates" entered by respondent, Federal Power Commission, on May 26, 1942, do not constitute an "order" within the meaning of Section 19(b) of the Natural Gas Act; and

Since, Congress has authorized this Honorable Court to review only an "order" of the Federal Power Commission, and has not authorized the review of mere "findings" of the Commission;

Therefore, it is respectfully submitted that the motion of respondent, City of Cleveland, to dismiss Part B of the Petition for Review should be granted.

Respectfully submitted,

THOMAS A. BURKE, JR.,
*Director of Law,*

SPENCER W. REEDER,
*Assistant Director of Law in Charge of Utility Controversies,*

ROBERT E. MAY,
*Attorneys for Respondent, City of Cleveland.*

| CITY OF AKRON, *Complainant*, vs. HOPE NATURAL GAS COMPANY, *Defendant*. | DOCKET NO. G-101 |
| PENNSYLVANIA PUBLIC UTILITY COMMISSION, *Complainant*, vs. HOPE NATURAL GAS COMPANY, *Defendant*. | DOCKET NO. G-127 |
| In the Matter of HOPE NATURAL GAS COMPANY. | DOCKET NO. G-113 |

## FINDINGS AS TO LAWFULNESS OF PAST RATES.

Upon consideration of the City of Cleveland's complaint and amendment, the Company's answers, the petitions and orders previously entered in these proceedings, the evidence of record, the briefs and oral arguments,

and the Commission having on this date entered and issued its Opinion No. 76 and order, which Opinion is hereby incorporated by reference and the appropriate portions are made a part hereof;

The Commission *finds* that:

(1) The City of Cleveland raised the issue of the lawfulness of the rate charged The East Ohio Gas Company by Hope Natural Gas Company, and requested this Commission to find the just, reasonable and lawful rate from June 30, 1939, to the date of this determination, as an aid to State regulation;

(2) The Commission has jurisdiction and authority to make such findings which are in the public interest;

(3) Hope Natural Gas Company is a corporation organized and existing under the laws of the State of West Virginia;

(4) Hope Natural Gas Company purchases and produces natural gas within the State of West Virginia;

(5) Hope Natural Gas Company transports, delivers and sells large quantities of the natural gas referred to in Finding (4) to The East Ohio Gas Company at points on and along the interstate boundary between the States of West Virginia and Ohio, which gas is so transported and sold at wholesale for the purpose of resale for ultimate public consumption at points outside the State of West Virginia;

(6) The transportation and sale of natural gas by Hope Natural Gas Company stated in Finding (5) constitute the transportation and sale of natural gas in interstate commerce within the purview of the Natural Gas Act, and the rates charged and collected by Hope for the gas so transported and sold have been subject to the exclusive jurisdiction of this Commission since June 21, 1938;

(7) The evidence of reproduction cost new of the Hope Company's property used and useful in the

production, transportation, delivery and sale of natural gas to its five interstate wholesale purchasers (as of December 31, 1938), as presented by the Company in these proceedings is hypothetical, conjectural and inherently fallacious and cannot be considered as having probative value in the determination of the allowable rate base;

(8) The evidence of the trended "original cost" of Hope Company's property (as of December 31, 1938), as presented by the Company, is basically erroneous and cannot be considered as having probative value in the determination of the allowable rate base;

(9) The Hope Company's restated "original cost" of its property (as of December 31, 1938) erroneously includes items and amounts in excess of the actual legitimate cost thereof as such cost is controlled by fundamental principles of cost determination, and as defined in the Federal Power Commission's Uniform System of Accounts and by decisions of this Commission;

(10) Equity and justice require the elimination of such erroneously included items and amounts referred to in Finding (9) in determining the rate base upon which the Company is entitled to earn a fair rate of return;

(11) The actual legitimate cost of Hope Natural Gas Company's property, excluding distribution property, property used to transport coke-oven gas, and unoperated acreage, was $51,019,585 for 1939 and $51,957,416 for 1940;

(12) The actual existing depletion and depreciation in Hope Natural Gas Company's property was $21,737,823 for 1939 and $22,328,016 for 1940, and the resulting actual legitimate cost, less actual existing depletion and depreciation, and excluding distribution property, property used to transport coke-oven gas and unoperated acreage, was $29,281,762 for 1939 and $29,629,400 for 1940;

(13) The unoperated acreage was useful or imminently useful and the actual legitimate cost of such acre-

age in the amounts of $567,152 for 1939 and $566,105 for 1940 should be included in the rate bases;

(14) Materials and supplies and cash working capital were necessary in the amounts of $2,100,000 for 1939 and $2,125,000 for 1940, and should be allowed in the rate bases;

(15) For the purpose of determining what rates were just, reasonable and lawful since June 30, 1939, the average rate base represented by the actual legitimate cost of Hope Natural Gas Company's property used and useful in rendering interstate service (Finding (12)), plus the cost of unoperated acreage and the necessary working capital, was $32,326,398 for 1939, $32,134,740 for 1940, and $33,712,526 since 1940;

(16) A rate of return of 6½% was liberal for the period of June 30, 1939, to date;

(17) The actual operations for 1939 and 1940 are the reasonable and proper bases for determining lawful rates in those years, and 1940 operations, as adjusted, are the reasonable and proper basis for determining lawful rates since 1940;

(18) The operating revenues from interstate sales were $14,866,894 for 1939 and $19,296,755 for 1940;

(19) The proper credit to Hope Natural Gas Company's operating expenses for the excess profits from the gasoline and butane extracted from its gas by its affiliate, Hope Construction & Refining Company, and for steam and boiler fuel furnished the affiliate, was $352,516 for 1939, $304,697 for 1940 and $304,697 annually since 1940;

(20) Reasonable and proper allowances for operating expenses (including amortization of reclassification and rate case expenses) and after allocation of costs to local West Virginia sales, miscellaneous gas revenues and the amount of tax required under lawful rates, are as follows:

| | 1939 | 1940 | Since 1940 |
|---|---|---|---|
| Operating Expenses | $14,242,454 | $15,775,195 | $16,272,934 |
| Miscellaneous Gas Revenues | (68,695) | (83,275) | (83,275) |
| Allocation of Costs to Local West Virginia Sales | (2,328,110) | (2,694,075) | (2,694,075) |
| Total Deductions from Interstate Revenues | $11,845,649 | $12,997,845 | $13,495,584 |

(21) The rates charged and received by the Company for the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption were unjust, unreasonable and excessive, and therefore unlawful, to the extent of $920,029 for the year 1939, $4,210,154 for the year 1940, and $3,609,857 since 1940 (on an annual basis), determined as follows:

| | 1939 | 1940 | Since 1940 |
|---|---|---|---|
| Revenues from Interstate Sales | $14,866,861 | $19,296,755 | $19,296,755 |
| Operating Deductions | 11,845,649 | 12,997,845 | 13,495,584 |
| Net Operating Income from Interstate Sales | 3,021,245 | 6,298,910 | 5,801,171 |
| 6½% Return on Interstate Rate Base | 2,101,216 | 2,088,756 | 2,191,314 |
| Excess | $ 920,029 | $ 4,210,154 | $ 3,609,857 |

(22) The total required revenue for all interstate service of the company was $13,946,867 for 1939, $15,086,601 for 1940 and $15,686,898 annually since 1940;

(23) Cost, conditions and characteristics of service show that the just, reasonable and lawful rates for natural gas sold by Hope Natural Gas Company in interstate commerce to The East Ohio Gas Company for resale for ultimate public consumption were those required to produce compensation in the amount of $11,528,608 for 1939, $11,567,185 for 1940, and $11,910,947 annually since 1940;

(24) The rates charged and received by the Hope Natural Gas Company for the transportation and sale of natural gas in interstate commerce to The East Ohio Gas Company for resale for ultimate public consumption were unjust, unreasonable, excessive,

and therefore unlawful to the extent of $830,892 during 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940.

By the Commission.

## OPINION

By the Commission:

These proceedings grew out of complaints filed by the cities of Cleveland and Akron, Ohio, and were enlarged by the Commission's Order of October 14, 1938, for an investigation of the reasonableness of all the interstate wholesale

rates of Hope Natural Gas Company under the provisions of the Natural Gas Act.[1]

The cities of Cleveland and Akron, Ohio, filed with the Commission complaints alleging that the price charged by Hope Natural Gas Company to East Ohio Gas Company for natural gas was unreasonable and unduly discriminatory. The Pennsylvania Public Utility Commission also filed a complaint asserting that the rates charged by Hope Natural Gas Company to Peoples Natural Gas Company, Fayette County Gas Company and the Manufacturers Light and Heat Company were unlawful.

The three complaint proceedings and the proceeding instituted by the Commission were consolidated for purposes of hearing. Upon petition, the Public Service Commission of West Virginia, the State of West Virginia and the City of Toledo, Ohio, were permitted to become interveners in the consolidated proceedings.

Hearings were held, pursuant to order and notice, at intervals during 1940 at which Hope presented its case-in-chief. After written and oral argument the motion of the cities of Cleveland and Akron for an immediate order reducing rates to East Ohio Gas Company was denied for insufficiency of evidence. Additional hearings were conducted during the first half of 1941 and concluded in July. The evidence presented during the 43 days of hearings covered all issues and embraced nearly a gross of extensive exhibits and about 7,000 pages of transcript. Each party to these proceedings was cognizant of the issues and was afforded ample opportunity to present evidence. Comprehensive briefs have been filed and the Commission, sitting *en banc*, has heard extensive oral argument.

[1] The term "interstate wholesale", when used in this Opinion means the sale of natural gas in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use.

## JURISDICTION

The jurisdiction of the Commission was not challenged in these proceedings. The facts show and counsel for Hope Natural Gas Company have stipulated that Hope transports and sells natural gas in interstate commerce to five companies for resale for ultimate public consumption.[2] Hope is a natural gas company within the purview of the Natural Gas Act and we may proceed with the determination of the lawfulness of its interstate wholesale rates. See *Illinois Natural Gas Co. v. Central Illinois Public Service Co.*, 314 U. S. 498; *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. ....

## OPERATIONS OF THE COMPANY

The Hope Natural Gas Company was organized in 1898 in West Virginia and is a subsidiary of Standard Oil Company (N. J.). Its property, composed of approximately 5,000 miles of pipe lines and 3,000 gas wells in West Virginia, is an integral part of the interconnected Standard Oil System which serves the Appalachian area with natural gas. The major customers of Hope are its affiliates, The East Ohio Gas Company and The Peoples Natural Gas Company, which serve a large area including Cleveland, Akron, Youngstown, Massillon, Canton, Pittsburgh and Altoona. Hope also sells gas to its affiliate, The River Gas Company, and to two non-affiliates, Fayette County Gas Company and The Manufacturers Light and

---

[2] Hope's pipe lines interconnect with those of its five wholesale customers and the gas which it sells to those companies flows in interstate commerce without interruption and is resold in Ohio and Pennsylvania. Hope sells and delivers gas (1) to the East Ohio Gas Company and the River Gas Company at several points along the West Virginia-Ohio state boundary; (2) to the Peoples Natural Gas Company and the Fayette County Gas Company at points on the West Virginia-Pennsylvania state boundary; and (3) to the Manufacturers Light and Heat Company in northern West Virginia, which transports and sells such gas in Pennsylvania for ultimate public consumption.

Heat Company. Hope produces about one-third of its total annual gas requirements and purchases the remaining two-thirds under more than 300 contracts.[3]

In 1940, Hope handled about 74,000,000 m.c.f. of gas and sold: (1) more than 40,000,000 m.c.f. to East Ohio Gas Company; (2) about 10,000,000 m.c.f. to Peoples Natural Gas Company; (3) more than 2,000,000 m.c.f. to Manufacturers Light and Heat Company; (4) approximately 860,000 m.c.f. to Fayette County Gas Company; (5) nearly 400,000 m.c.f. to River Gas Company; and (6) more than 11,000,000 m.c.f. to local consumers in West Virginia. The remainder totaling about 9,000,000 m.c.f. was gas lost or used in Company operations.

Hope's natural gas is processed by an affiliate, Hope Construction & Refining Company, for the purpose of extracting the natural gasoline and butane. Another affiliate, the Domestic Coke Corporation, sells its by-product coke-oven gas to Hope for use as boiler fuel in Hope's main compressor station.[4]

## CORPORATE AND FINANCIAL HISTORY

Hope Natural Gas Company is a large, seasoned and successful utility, and during its corporate history of more than forty years its capital structure has been solely in the form of common stock. Since 1908, it has been a subsidiary of Standard Oil Company (N. J.) and all of its outstanding capital stock, having an aggregate par value of approximately $28,000,000, is owned by Standard.

---

[3] Hope purchases coke-oven gas from the affiliated Domestic Coke Corp. and transports the gas to Hastings for use as compressor station fuel. It is agreed that the property and costs relating to that transaction be eliminated and the equivalent m.c.f. of natural gas be substituted at Hastings compressor station at a cost of 22¢ per m.c.f.

[4] Hope Natural Gas Company in December 1939 merged the former Reserve Gas Company, but by agreement between counsel that property and income have been segregated and excluded for the purposes of these proceedings.

During Hope's existence it has paid more than $108,000,000 in dividends, $11,000,000 of which were stock dividends. From 1898 to 1941 the average annual cash dividends to stockholders exceeded 20% on the average annual amount of capital stock issued for cash or other assets.

The Company presented its balance sheet as an exhibit, which shows an owner's equity in assets, at the end of 1938, of more than $33,000,000, comprising $28,000,000 of capital stock and $5,000,000 of surplus. This equity is represented in assets principally by gas plant in the net amount of $15,500,000, Government bonds of $11,000,000, and cash and investments of $5,500,000. The $15,500,000 net investment per books in the Company's gas plant, including distribution property, is actually about $8,000,000, because the Company had previously transferred $7,500,000 from depletion and depreciation reserves to earned surplus.[5]

We will now proceed to the pragmatic determination of the lawful rates, within the ambit of our statutory authority.

## RATE BASE

The Hope Company claimed a rate base of $66,000,000 and calculated that it was earning a rate of return of about 3% from its interstate business on that base. The claimed rate base was molded from an estimate of the cost

---

[5] Source: Ex. No. 11, pp. 10 and 21; Ex. 61, p. 3.

| | |
|---|---|
| Plant, Dec. 31, 1938, per books (including Distribution Property of about $2,795,000) | $56,213,454 |
| Depreciation and depletion reserve, per books | 40,638,562 |
| | 15,574,892 |
| Less adjustments in 1934 ($5,901,000) and in 1908 ($1,650,000) transferring these amounts from depreciation and depletion reserve to earned surplus | 7,551,000 |
| Net Investment | $ 8,023,892 |

to reproduce the property less observed depreciation, plus working capital. The derived rate of return was based upon the Company's presentation of revenues and expenses averaged for 1937, 1938 and 1939.

## The Company's Estimates of Reproduction Cost and Trended "Original Cost"

The estimate of the Company approximated $97,000,000 for the cost to reproduce the property. That result was reached by applying unit prices for material and labor to an inventory and adding about 17% to that total for undistributed construction costs.

Many hypotheses were employed for this reproduction-cost estimate and each of them disregards the development and experience of the Hope Company. Quoted prices for pipe and other material, rather than actual current prices, were used and obsolete compressor station equipment was priced by applying quoted prices for modern equipment. The record demonstrates that the quoted price for pipe is not in fact the price that is paid. Actual prices are the result of negotiation. The calculated construction costs exceeded the actual pipe line construction costs experienced by the Hope Company during a recent period. This appraisal of the cost to reproduce the system included $14,000,000 for undistributed construction costs or overheads which ignored the experience of the Company with respect to such costs and the fact that Hope has charged all overhead expenditures (with minor exceptions) to operating expenses in the past. It is improper and inequitable to capitalize items formerly charged to operating expenses, and in rate making the inclusion of such expenses in the rate base would compel the rate payer to reimburse the Company more than once for the same item. We will discuss this point extensively in connection with the Company's claimed "original cost."

The Company's hypothetical reproduction cost estimate is nearly double the actual legitimate cost of the

property, although, as the record shows, the greater part of the property was constructed during the high-price period of 1917-1930.

After full consideration of the estimate of reproduction cost new presented by the Company, we find that it is not predicated upon facts and that it is too conjectural and illusory to be given any weight in these proceedings. See *Railroad Commission v. Pacific Gas & Electric Co.*, 302 U. S. 388, 397; *Re Canadian River Gas Co. et al.*, F. P. C. Op. 73.

The Company also presented a trended "original cost" estimate which exceeded $105,000,000. The objective of that estimate, according to the witness, was to reflect changes in price levels and to indicate what the original cost of the property would have been if 1938 material and labor prices had prevailed throughout the whole period of the piecemeal construction of the Company's property since 1898. At the outset this estimate includes a multi-million dollar error because the trend factors were applied to an inflated "original cost" claim of the Company, which we will discuss fully under the subject of actual legitimate cost. The evidence discloses fundamental errors in the trending process used. No consideration was given by the Company's witness to the great advances in the science of construction and the improvement in the quality of pipe and equipment in the natural gas industry, during the long history of the Company.

Hope Company's own experience demonstrates that man-hour productivity has increased greatly throughout the years during which the Company's property was constructed. Yet the Company's witness gave no consideration to that fact, but utilized high 1938 hourly wage-rates to price the slower obsolete construction methods of the past on a time basis. It is undisputed that service qualities of pipe, including increased tensile strength and reduced weight, have been improved in recent years. Pipe is sold on the basis of weight and the heavier and inferior pipe

in the Hope System was priced at 1938 prices for modern pipe, in disregard of the known improvements in the product. Another basic defect in the trending was the adoption of the arithmetical average of the cost per ton of smaller sizes of pipe when 95% of the cost of pipe in the Company's transmission lines represented pipe having greater diameters. That such a pipe trend is not representative is obvious. Furthermore, the 1938 prices upon which the trends were based, being representative of only slightly more than 1% of the total plant, furnished no dependable yardstick.

In the light of the evidence the conclusion is inescapable that the Company's trended "original cost" estimate is not founded in fact, but it is basically erroneous and produces irrational results.

The reproduction cost studies and the so-called trended "original cost" studies were the typical, hypothetical conjectures which have plagued rate regulation for more than forty years. The actual development and experience of the Hope Company were ignored. In addition, assumption upon assumption as to material and labor costs, and magnified imagination as to overheads were indulged in lavishly. The results have no probative value and accordingly must be condemned.[6]

The estimates of reproduction cost and trended "original cost" lack reliability, so we turn to the evidence of actual cost of Hope's property.

---

[6] Under the recent decision of the Supreme Court involving the Natural Gas Act in *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. ...., and the decision of this Commission in *Re Chicago District Electric Generating Corporation*, 39 P. U. R. (N. S.) 263, involving the companion part of the Federal Power Act, such estimates of reproduction cost and trended "original cost" need not have been admitted in evidence.

**Actual Legitimate Cost**

The Company and the Commission's Staff submitted exhibits and supplied testimony on the cost of gas plant used in the Company's interstate service. The Company claimed that cost, as of December 31, 1938, amounted to $69,735,638, the Staff indicated a figure of $51,984,153, while the books disclosed an investment of approximately $52,730,666.[7]

Hope's vouchers, books and records are adequate for examination, analysis and audit. Hope kept complete records of its expenditures throughout its existence, so no estimates are required to ascertain the actual cost.

Table A appearing on page 18 compares the cost of facilities used in interstate service as claimed by the Company, as shown by the books of account, and according to our findings, as of December 31, 1938.

**The Company's Estimated "Original Cost"**

The first step in the Company's determination was the taking of an inventory. The inventory units were then priced at estimated cost, including arbitrary overheads. The amounts shown as plant costs by the books were ignored, except for the purpose of aiding in estimating unit costs. As is shown by Table A, the Company's method resulted in a claimed net increase of $17,004,972 over the

---

[7] The book cost of the interstate facilities is derived as follows:

| | | |
|---|---|---|
| Total Plant Investment per books | | $56,213,454 |
| Less: | | |
| Distribution Property | $2,795,083 | |
| Unfinished Construction | 81,392 | |
| Intangible Plant | 30,186 | |
| Property Used to Transport Coke-oven Gas | 576,127 | 3,482,788 |
| Plant Investment, per books, of Interstate Facilities | | $52,730,666 |

amount recorded as investment in the interstate properties on its books of account. The Company claims, in other words, that its books fail to show the true cost of such properties in that amount. The items of that amount which are identifiable represent expenditures previously charged to expense accounts. Some of the alleged expenditures were not incurred at all. For example, claimed interest during construction of $632,000 was not actually paid. Obviously to the extent that the plant costs are understated, if they are, the difference must represent charges to other accounts, particularly expense accounts, in the books.

The claimed additional costs are divisible into two groups—one relating to properties constructed by the Company, and the other relating to property acquired from other utilities. Table B on page 19 shows the general nature of the $17,004,972.

# TABLE A

| Account | Cost of Plant as of December 31, 1938 | | |

**TABLE B**

**Constructed Property**

| | |
|---|---|
| Inventory, Transfer and Correcting Adjustments | $(1,821,581)[8] |
| Direct Material and Labor Costs not Capitalized | 13,580,814 |
| Unloading, Hauling and Warehouse Handling Costs | 383,454 |
| Indirect Field Costs | 396,141 |
| Overhead Costs | 2,866,414 |
| Total Claimed Adjustments to Constructed Property | $15,405,242 |
| Claimed Adjustments to Properties Purchased from Other Utilities | 1,599,730 |
| Total | $17,004,972 |

The Company's cost study was made by an engineering firm. The witness for the Company, a valuation engineer, indicated clearly that he was not concerned with the Company's past practices in determining costs and in determining expenses. To him it was of no concern whether an item had been charged to expense and the cost thereof recouped in rates, or even whether an item represented an expense under the wide discretion of management allowed by accepted principles of accounting. The realities as to past practices and determinations received no consideration. Evidently the object of the study was to determine the maximum cost which could be assigned to the properties under any theory or principle of cost determination, regardless of the fact that the Hope Natural Gas Company had been in business more than forty years and had made determinations in its regular course of business as to which of its expenditures constituted investment in plant and which constituted operating expenses.

The first proposed adjustments to book cost ($1,821,581), reflecting inventory, transfer and correcting adjustments, will be discussed hereinafter.

[8] Parentheses indicate decrease.

The second adjustment ($13,580,814) represents items previously charged to expense and not capitalized in the books or items which cannot be identified in the books and records and, therefore, may not have been incurred at all. The amount of $13,580,814 may be subdivided as follows:

| | |
|---|---|
| Well Drilling | $11,279,554 |
| Other Direct Material and Labor Cost | 996,543 |
| Labor Costs in Laying Mains, Constructing Compressor Stations, etc., During Years 1918 to 1922, Inclusive | 1,295,953 |
| Leasehold Cost | 8,764 |
| Total | $13,580,814 |

The largest item of claimed additional cost relates to labor and drilling equipment used in drilling wells. The additional amount claimed ($11,279,554) is associated with 2,633 wells. It is the Company's contention that these expenditures, which were charged to operating expenses when incurred, should now be included in the rate base.

It was the consistent practice of the Hope Company up to 1923 to charge the cost of drilling wells to operating expense. This likewise was the general practice of the natural gas industry. It followed the well-established practice of extractive industries of charging items to expense which in less venturesome enterprises were ordinarily charged to the plant account.[9] The theory underlying the practice was that additional wells were constantly needed to keep the Company in business, hence the cost incurred was not for the purpose of adding to the property but rather for the purpose of maintaining the business. The evidence shows that the Natural Gas Association of America opposed a provision in the first uniform system of accounts for natural gas companies issued by a State

[9] *Re Hope Natural Gas Co.*, 1921 E 418, 439-440; *United States v. Roden Coal Co.*, 39 Fed. (2d) 425; *Marsh Fork Coal Co. v. Lucas*, 42 Fed. (2d) 83; *Commissioner of Internal Revenue v. Brier Hill Collieries*, 50 Fed. (2d) 777.

commission which required capitalization of well drilling expenditures. That Association took the view that such expenditures were necessary operating expenses. In fact, Hope did not change its practice in this respect until it was required to do so by the provisions of the system of accounts for natural gas companies promulgated by the Public Service Commission of West Virginia, effective in 1923. It is significant that West Virginia's system of accounts did not require and evidently did not permit the Hope Company to re-account for its past expenditures, but merely required a change as to treatment of well drilling expenditures beginning with its effective date.

The Company's practice of charging well drilling expenditures to operating expenses, therefore, conformed to the principles and practices of the time. One of the obvious purposes of keeping books of account is to inform management so that proper managerial decisions may be made. One of the first functions of management, of course, is to endeavor to fix prices so that revenues will cover operating expenses and yield a profit. Where it is the general practice of the industry to treat certain expenditures as operating expenses, it is manifest that such expenditures will be considered as expenses in its rate negotiations and determinations.

If there were any doubt about this matter, it would be dispelled by the action of the Hope Company itself. In 1921 the Hope Company was involved in a rate proceeding before the Public Service Commission of West Virginia. It was a proceeding in which Hope sought to increase its rates. In that proceeding the Company claimed well drilling and other expenditures now sought to be included in the rate base, as operating expenses. They were allowed as such by the Public Service Commission of West Virginia.[10] No further proof is needed to show that Hope

[10] *Re Hope Natural Gas Co.*, P. U. R. 1921 E 418, 433, 439-440.

considered the expenditures in question as operating rather than plant items, in its efforts to recover full operating costs plus a profit in the conduct of its business.

No greater injustice to consumers could be done than to allow items as operating expenses and at a later date include them in the rate base, thereby placing multiple charges upon the consumers.

The other direct material and labor costs of $996,543 appear, to the extent they can be identified, to have been charged in the past to maintenance and repairs.

The adjustments for cost of labor in laying mains, constructing compressor stations and other property totaling $1,295,953, and the adjustment of $8,764 to the cost of leases are treated later.

In addition to well drilling expenditures, other items now sought to be included in the plant accounts which were previously included in expenses, if they were incurred at all (the Company's method makes it impossible to determine whether or not certain of the expenditures were incurred) are as follows:

| | |
|---|---|
| Unloading, Hauling and Warehouse Handling Costs | $ 383,454 |
| Indirect Field Costs | 396,141 |
| Other Overhead Costs | 2,866,414 |

As to these items, here again the Company followed a consistent practice, and the practice of the industry, in charging such expenditures to expense accounts. It was not customary for the natural gas industry or other extractive industries to load the plant accounts with overhead items, such as shown above. Even under the relatively definite requirements of the Commission's present Uniform System of Accounts, considerable discretion and latitude are allowed management in accounting for overhead expenditures. Accordingly, the allowance of the items mentioned would not represent the correction of past

errors, but merely the substitution of present judgment for the judgment exercised at the time the expenditures were incurred, which covered a period of forty years. The important rule is that once discretion has been exercised, subsequent action must be consistent with the decisions previously reached. There is no settled principle controlling the determination of the exact amount of overheads, if any, which should be applied to the cost of plant items.

Besides claiming large additional costs for property constructed by the Company, Hope claims a net sum of $1,599,730 representing alleged additional original cost of property acquired from other utilities. These properties, acquired chiefly from affiliated utilities, were accounted for by Hope at the cost to it, which was the cost to the predecessors. Hope now claims that the costs accounted for as plant by the predecessors were in error in that the predecessors followed the same allegedly erroneous practices that Hope followed. It, therefore, claims that well drilling costs in the amount of $1,364,087, other direct material and labor costs of $286,173, unloading, hauling and warehouse handling costs of $18,557, indirect field costs of $38,519, other overhead costs of $122,043 and leasehold costs of $6,388, all of which, if incurred at all, the predecessors had charged to expense, should be added to its plant investment figure and included in the rate base.[11] Since these predecessor companies kept their books and records exactly as did Hope, in accordance with the general practice of the industry, the proposed adjustments, except for leasehold costs, are in the same category as the items which Hope now attempts to restate in its plant accounts.

In the course of its study, the Hope Company determined that considerable property which was recorded in its plant accounts, was no longer in existence. In other

[11] There were also inventory, transfer and correcting adjustments which decrease the book cost by $236,037, and they are discussed hereinafter.

words, there were unrecorded retirements. Offsetting the unrecorded retirements were certain items of existing property for which the Company found no costs in its plant accounts. More than likely, certain of the latter merely represented the failure to identify items which were determined to be unrecorded retirements. The net effect is a substantial adjustment ($1,821,581 for constructed property, and $232,930 and $3,107 for acquired property) for unrecorded retirements and miscellaneous corrections. The adjustment is not controverted and should be made.

**Impropriety of Including in Rate Base Items Previously Charged to Expense**

It has been shown that the Company's claim of additional plant cost over and above what is recorded on its books as plant investment represents largely expenditures previously charged to expense in accordance with the discretion of management. The Company, in other words, now impeaches its books and its former financial statements to regulatory bodies, tax authorities, investors, and others. It impeaches the decisions of management made at the time the expenditures were incurred. It does this in spite of the fact that its past decisions conformed to its own consistent practices, until required to change them by a regulatory agency, and to the general practice of the natural gas industry, as well as the extractive industry. The adjustments proposed, therefore, do not reflect the correction of errors in the past. Errors as to these items were not made.

The past determinations of the items constituting plant investment were deliberate, conscious acts on the part of management at the time of the transactions. A decision obviously must be made when an expenditure occurs as to whether it represents an investment in plant or an expense. There must also be some finality to these

decisions.[12] If they are treated as expenses at one time and as plant investment subsequently, chaos in rate-making and in corporate finance will prevail. It is no answer that many of the expenditures in question were incurred prior to the effective date of a prescribed uniform system of accounts. The Company kept plant and expense accounts throughout its history and conformed to the general business practices of the industry and like business institutions. It was evidently thoroughly convinced as to the propriety of its decisions, as witness its claim before the West Virginia Commission in 1921, that the very expenditures in question were operating expenses. The Company is now estopped from re-accounting for those expenditures.

With the decline in favor of the doctrine of "fair value" as the only mode of public utility rate regulation, its keystone, reproduction cost, crumbles. Bona fide investment figures now become all important in the regulation of rates. Immediately, however, we find an effort to tamper with these. There is in progress an attempt to make the reproduction cost *process* survive in the determination of actual cost of or investment in plant. Thus, in this case an inventory was taken and then units were priced at the estimated "actual cost." The method should be condemned at the threshold. For in addition to being permeated with conjectural estimates, it gives no heed to the realities of past events. Consistent treatment of expenses and plant investment costs is indispensable to the successful operation of the regulatory system.

---

[12] Costs of exploration for and development of future gas reserves are considered current operating costs by the industry and Hope has included such costs in its current operating expenses. If retroactive accounting were allowed then the Company might restate these costs as capital investment in the future productive acreage. The Commission will allow $600,000 in annual operating expenses for exploration and development costs in fixing rates. If this item were permitted to be restated in plant cost ten years from now $6,000,000 would be added to the rate base resulting in multiple charges to consumers.

This is not to say that genuine errors in the investment accounts should not be corrected and the true figures given recognition in the rate base. Where real errors are made, they probably should be corrected. A distinction must be made, however, between genuine errors and a change in point of view, whereby past, deliberate decisions within the scope of an accepted principle are sought to be impeached to the pecuniary benefit of the Company.

The courts and commissions which have considered this matter have generally refused to include in the rate base amounts previously charged to expense in accordance with discretion of management. In the instant case, large parts of the claimed additions to book costs relate to well drilling expenditures and alleged overheads. The very question at issue has been passed upon twice by the Supreme Court of Appeals of West Virginia. In the first case in 1924, the Natural Gas Company of West Virginia sought to include such expenditures in the rate base after they had been charged to expense. The Public Service Commission of West Virginia refused to allow them. The Supreme Court of Appeals sustained the Commission.[13] The question was raised again in 1934 by the Natural Gas Company of West Virginia. The Public Service Commission of West Virginia then concluded that the inclusion of such expenditures in the rate base was required as a matter of law. The City of Wheeling, West Virginia, appealed the Commission's decision. The Court reversed the Commission and again held that items previously charged to operating expenses should not be included in the rate base.[14]

Thus, by far the weight of authority in court and commission decisions sustains the principle, sound in equity

---

[13] *Natural Gas Company v. Public Service Commission*, 95 W. Va., 557, 121 S. E. 716, 720, P. U. R. 1924 D 346, 361.

[14] *Wheeling v. Natural Gas Company*, 115 W. Va. 149, 175 S. E. 339, 343-4, 5 P. U. R. (N. S.) 471, 479, app. dis. 296 U. S. 659.

and justice, that items previously charged to operating expenses under the allowable discretion of management should not later be included in the base on which customers are required to pay a return and depletion and depreciation allowances.[15]

The Hope Company's earnings over the years have been ample to provide for all operating expenses, including the $17,800,000 which it attempts to add to actual cost, an excessive reserve for depletion and depreciation, taxes, and large returns to investors. During the period 1898 to 1923 for which the Company seeks to re-account and expand its recorded plant costs by approximately $12,600,000 for well drilling costs alone, the average rate of earnings on the annual average invested capital (capital stock and surplus) was more than 15%:

**Actual Legitimate Cost Or Gross Plant Investment**

Accordingly, we begin with the book cost in the determination of the actual legitimate cost or investment in the facilities used in the Company's interstate business. We have already found that such book cost at the end of 1938 amounted to $52,730,666. There must be deducted from the book cost the unrecorded retirements, or inventory adjustments in the amount of $2,057,618. There is added to the book cost the amount of $15,152 ($8,764 for constructed property and $6,388 for acquired property) representing

---

[15] *Re Los Angeles Gas & Electric Corp.*, P. U. R. 1931 A, 132, 143-4, aff. 58 Fed. (2d) 256, 261, 267, 289 U. S. 287; *Re Peoples Gas Light & Coke Co.*, 19 P. U. R. (N. R. 1918 C, 453, 464-6; *Re Mondovi Telephone Co.*, P. U. R. 1933 B, 319, 321-3; See *Re Northwestern Electric Co.*, 36 P. U. R. (N. S.) 202, 208-213, aff. 125 Fed. (2d) 882; *Re Canadian River Gas Co., et al.*, F. P. C. Op. 73; cf. *Chicago & N. W. R. Co. v. Com'r. Int. Rev.*, 114 Fed. (2d) 882, 886, cert. den. 312 U. S. 692.

adjustments due to errors in stating the cost of leases, and an amount of $1,295,953, representing plant costs properly capitalized and then arbitrarily charged off to operating expenses.

There is considerable question as to whether the latter amount should be restored to book cost in determining the rate base. The amount arises as follows. From 1918 to 1923 Hope followed the peculiar practice of capitalizing the cost of direct labor incurred in laying pipe lines, constructing compressor stations and in installing equipment, but at the end of each year, arbitrarily charged off the amount thus capitalized during the year. This practice was peculiar to the Hope Company and was not a general practice of the industry. It did not conform to sound accounting principles. Hope followed the correct practice during all of its existence except for the few years mentioned. Under the circumstances, the amount is restored to the investment figure and is allowed in the rate base. The allowance in this instance, however, is not to be construed as a precedent.

As of December 31, 1938, the cost of unoperated acreage ($584,382) and the cost of certain wells and field lines ($192,150) then not in service were contained in the accounts. These items are eliminated from gas plant in service as of December 31, 1938, and appropriate adjustments for the use of such property and facilities are made subsequently.

After considering the evidence based upon the vouchers, books and records of the Company, and as a result of the application of fundamental principles of accounting, cost determination and equity, the Commission finds, in the words of Section 6(a) of the Act, the actual legitimate cost as of December 31, 1938 in plant used in the interstate business was $51,207,621, composed as follows:

| | |
|---|---|
| Book Cost 12/31/38 | $52,730,666 |
| Less Inventory adjustments (unrecorded retirements) | 2,057,618 |
| Less Wells and Field Lines Not in Service | 192,150 |
| Less Unoperated Acreage | 584,382 |
| Sub-total | 49,896,516 |
| Plus Correction to Cost of Leases | 15,152 |
| Plus Capitalized Costs Charged Off in Error | 1,295,953 |
| Actual Legitimate Cost of Plant in Interstate Service | $51,207,621 |

There were more retirements than additions in 1939, so the actual legitimate cost was $51,099,024 at the end of 1939. The record shows net additions of $965,533 in 1940 to produce a total actual legitimate cost of $52,064,557. Certain inactive wells with the connected field lines became active in 1940 and the cost of this property is $110,316. We find that the actual legitimate cost, including such currently used property, aggregates $52,174,873 as of December 31, 1940.

This actual legitimate cost is predicated upon facts and it is the best evidence in these proceedings, so we will employ it for determining the proper and allowable rate base.

**Depletion and Depreciation**

In determining the allowable rate base in these proceedings the actual existing depletion and depreciation should be deducted from the actual legitimate cost of the property devoted to the interstate service. See *Los Angeles Gas & Electric Corp. v. R. R. Comm.*, 289 U. S. 287, 312. Actual existing depletion and depreciation is the extent to which the service life, that is the economic life, of the property has been consumed due to such forces as exhaustion of the natural gas supply, wear, inadequacy, and

obsolescence.[16] Annual depletion and depreciation measure the economic service life consumed in one year, actual existing depletion and depreciation are the accrued consumption of the utility's economic service life on a certain date; the annual allowance for depletion and depreciation must, therefore, be correlated with the actual existing amount to avoid injustice to the utility or rate payer. *Re Canadian River Gas Co., et al.*, F. P. C. Op. 73; *Re Chicago District Electric Generating Corp.*, 39 P. U. R. (N. S.) 263, 275; *Re Interstate Power Co.*, 32 P. U. R. (N. S.) 1, 10.

The Company presented inconsistent claims in this respect. It alleged a relatively small amount of accrued or existing depletion and depreciation to be deducted in fixing the rate base, but claimed large annual amounts for future operating expenses.

The Company contends that the accrued depletion and depreciation in its property equaled approximately 35% of the reproduction cost at the end of 1938. We have weighed the estimate of reproduction cost and found it wanting. In addition, it is inequitable to predicate depletion and depreciation upon the delusive reproduction cost. The integrity of the investment will be maintained by basing depletion and depreciation upon actual legitimate cost and the Supreme Court has approved that method.[17]

The Company determined accrued depreciation primarily by the observation process and obtained what is called a "per cent condition" of the property. For annual expense purposes, it weighted the observed depreciation with retirement of property up to the date of the study. The fallacy of the "per cent condition" theory of accrued

---

[16] *Lindheimer v. Illinois Bell Tel. Co.*, 292 U. S. 151, 167; *Re Canadian River Gas Co., et al.*, F. P. C. Op. 73; cf. *Depreciation Charges of Telephone and Steam Railroad Companies*, 177 I. C. C. 351, 408, 422.

[17] *Lindheimer v. Illinois Bell Tel. Co.*; 292 U. S. 151, 167-9, 176; *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. . . . .

depreciation is plain here. To illustrate, under the hypothesis of the Company's witness, in determining the "per cent condition" of certain compressor station equipment, the property would be found to have depreciated only 25% throughout its life or be in 75 "per cent condition," and then suffer a precipitous loss in the brief final stage of service. Such a theory is opposed by reason and facts. *Los Angeles v. Southern California Telephone Co.*, 14 P. U. R. (N. S.) 252, 273-4. The Company's estimate of existing depreciation was based primarily upon a sporadic visual inspection of physical deterioration. Most of Hope's production and transmission property is not visible and the extent to which the service life has been consumed can not be determined from observation alone. Also, the functional causes of the retirement of property are given little consideration by the Company's visual method which samples physical causes. *Re Rochester Gas & Electric Corp.*, 33 P. U. R. (N. S.) 393, 468-490. The Commission concludes that the so-called accrued depletion and depreciation claimed by the Company does not give full or proper consideration to all factors contributing to the retirement of property, and that it does not reflect the actual existing depletion and depreciation or diminished service life of the property in service.

**The Required Reserve For Depletion and Depreciation**

The same factors that cause annual depletion and depreciation cause the actual existing depletion and depreciation to be deducted from the property in fixing the rate base. In our opinion, where reasonable and proper depletion and depreciation accounting practices have been observed by a natural gas company, the resulting reserve is the best measure of the depletion and depreciation existing in the property, i.e., the accumulated cost of property which has been consumed in service.

It is well known that many electric and gas utilities have not observed sound depreciation and depletion practices. The Hope Company is in this category. For many years most of Hope's business was not under regulation. Its practices as to depreciation and depletion, like the practices of many other utilities, were inconsistent and haphazard. Its book reserve does not measure the actual existing depreciation and depletion.

This Company has actually accumulated an excessive reserve. We are confronted, therefore, with the question as to whether that excessive reserve, or the reserve requirement (actual existing depreciation and depletion), should be deducted in determining the rate base.[18] We have formerly indicated that public utilities ought to set up proper depreciation (and depletion) expense and that the resulting reserve should be deducted from the gross cost in the rate base determination.[19] We reiterate that view.

We believe, however, that under such circumstances as exist in this case, where a large part of the Company's business is brought under regulation for the first time and where incorrect depreciation and depletion practices have prevailed, the best procedure is to deduct the reserve requirement in computing the rate base. This procedure will permit us to be consistent in those cases where utilities have deliberately failed to observe sound practices and as a result have deficient reserves. Thus, in the *Interstate Power Company* case, where the company had been negligent in accounting for depreciation and had a deficient reserve,

---

[18] There are those who argue that excessive reserves should be deducted. *Pennsylvania Public Utility Comm. v. The Peoples Natural Gas Co.*, Nos. 11380, 12683 (1942) Buchanan, dissenting; See *Chesapeake & Potomac Tel. Co. v. Whitman*, 3 Fed. (2d) 938, 951-953; *New York Telephone Co. v. Prendergast*, 36 Fed. (2d) 54, 66.

[19] *Re Interstate Power Co.*, 32 P. U. R. (N. S.) 1, 10; *Re Chicago District Electric Generating Corp.*, 39 P. U. R. (N. S.) 263, 275.

we deducted the higher reserve requirement, as the measure of actual existing depreciation.

It should be borne in mind, however, that the deduction of the reserve requirement, rather than the actual book reserve, is for the purpose of getting a sound basis for future regulation and control of rates. Hereafter, the Company, in accordance with this Opinion and under our System of Accounts, is required to record proper depreciation and depletion expense. Hence, the books of this Company, as well as the books of others subject to our jurisdiction, after once having the reserve requirement determined, should reflect in substantial degree the proper depreciation and depletion. Use of the reserve requirement in this case will produce a proper starting figure so that the book reserve can be deducted hereafter as the proper measure of the actual depreciation and depletion. This treatment will then be consistent with the view that the book reserve is the proper deduction from the gross cost in determining the rate base.

It becomes necessary, therefore, to ascertain the best measure of the reserve requirement. The purpose of depletion and depreciation accounting is to offset diminution in service value[20] of property being used in service, and to determine as accurately as possible another element of the cost of service for a particular period. All of Hope's physical property, except certain land, will be depleted or depreciated completely when it reaches the end of its useful or economic life. Physical and functional forces, whether their effects are visible or not, are constantly reducing the service life of the Company's property. Service life is the equivalent of economic life or the utility of the property. Hope incurs plant costs to provide for future

[20] "Service value" is the difference between original cost and the net salvage value of gas plant. Depletion and depreciation signify the consumption of service life of property and when that is translated into dollars it shows the loss in service value.

service and to make production possible. As natural gas service is rendered, the economic value of property is gradually consumed, and the property is finally retired at the end of its service life. The cost of the property consumed annually in rendering that service should be charged to operating expenses to reflect the depletion and depreciation incurred.

The Commission's Staff presented a depletion and depreciation reserve requirement study in these proceedings. Estimates were made of the over all service lives of the properties by classes; those average service lives were converted into depreciation rates, and then applied to the cost of properties to determine the portion of the cost which had expired, that is, which related to the consumed service lives. The study covers the operations of the Company from its beginning in 1898 to December 31, 1940. It shows annual amounts for each group of property from the date installed to the date of retirement, and it concurrently provides the necessary reserves for property retired and for the ultimate retirement of existing property. The fundamental principle that annual expense for depletion and depreciation must be harmonized with accrued depletion and depreciation has been applied here. The straight-line service life method was used to compute the reserve requirement for all of the material, equipment and structures of the Company, and the unit-of-production method was applied to plant costs which are associated with the gas supply, i.e., gas producing lands and leases, field line and gas well construction, rights-of-way, and costs of abandoning gas wells.[21] The service life study was made by a properly qualified Staff engineer who analyzed Hope's past experience, including the retirement of property over the years. He gave consideration to relevant service life data on other pipe lines. He also considered the functional and physical aspects of depreciation. As an aid in the deter-

[21] As defined in the Uniform System of Accounts.

mination of service lives he made a field inspection of the Company's physical properties. The unit-of-production method used by the Staff was related to the gas reserves of the active wells of the Company. This case is free from the usual complexities involved in the estimate of gas reserves because the geologists for the Company and the Commission presented estimates of the remaining recoverable gas reserves which were about one per cent apart. The permeability and porosity characteristics of the region cause isolated pools of natural gas, and the Company's gas production properties are intermingled with non-productive areas and other companies' properties. This situation necessitated the segregation of Hope's property into gas producing areas for the depletion and depreciation reserve requirement study. Gas rights, well construction and connected field line construction costs are consumed in service proportionately with the depletion of the associated gas supply. Well equipment and field pipe line material are recovered and used again when the various sources of gas supply are exhausted. These facts of operation have been recognized in the ascertainment of the required reserve for depletion and depreciation.

The Staff recommended the depletion and depreciation reserve requirement for Hope's production, transmission and general plant in the amount of $23,520,561 as of December 31, 1940.[22] After a careful analysis of the evidence we have accepted certain adjustments advocated by the Company and find that the depreciation and depletion reserve should be not less than $22,328,016 as of December 31, 1940. These adjustments are as follows: (1) Due to

[22] That recommended required reserve is after a deduction of $1,162,710 for cost of abandoning property. The depreciation rates used in the reserve requirement study make proper provisions for the inevitable cost of abandoning property. But during the period 1898-1931 Hope charged the cost of abandoning property to maintenance expense, rather than to the depreciation reserve as a part of the net salvage.

the plant inventory adjustment made by the Company, as of December 31, 1938, and accepted by all parties, a net reduction in the plant accounts was made which represents property retired prior to December 31, 1938, but not so recorded on the books. The Company contends that 10 years is a fair approximation of the average period by which these retirements have been accumulating, hence the depreciation provisions should be reduced for the 10-year period. Had the retirements been made on the books as soon as the property was retired the depreciation base would be reduced and the annual provisions would be less. It is impossible to determine the actual dates the property was retired and we accept the 10-year period as a reasonable estimate of the average time from the date the property was retired to December 31, 1938. This adjustment results in a reduction of $31,106 in annual depreciation expense for each year and a reduction of $311,060 in the reserve requirement as of December 31, 1938. (2) In the case of lines lifted, Hope has usually retired labor cost and charged it to the depreciation reserve. But in the case of pipe retired in connection with a replacement the original labor was not always retired and the renewal labor was charged to operating expense. The depreciation rates applied by the Staff include provisions for the retirement of all labor and materials, hence its reserve requirement computation includes accruals for construction labor cost on the main pipe lines which has been retired and not charged to the depreciation reserve. The Company has estimated an amount of $272,693 representing the additional retirements of labor cost which we will allow as a reduction in the reserve requirement. (3) The group depreciation rate of 2.5% employed by the Staff in its study should be reduced to 2.22% for gas well equipment. As revised the rate for gas well material is the same as for field line

---

[23] Total provisions from 1898 to 1938, inclusive, amount to $5,060,456 at a 2.5% depreciation rate and $4,493,685 at a 2.22% depreciation rate for gas well equipment.

material, although the evidence indicates that a somewhat shorter average life has been experienced for gas well material than for field line material. At the rate of 2.22% the annual depreciation expense will be reduced $21,110 for 1939 and $20,911 for 1940. Consistent with the reduction in the annual depreciation expense the reserve requirement at the end of 1938, 1939 and 1940 will be reduced $566,771, $587,881, and $608,792, respectively.

The first two of the above-mentioned adjustments are the result of certain accounting practices of Hope prior to December 31, 1938 and do not affect depreciation expense for the years subsequent to that date. The reserve requirement which the Commission finds to be reasonable and proper is summarized as follows:

**Depletion and Depreciation Reserve Requirement**

| | Dec. 31, 1938 | Dec. 31, 1939 | Dec. 31, 1940 |
|---|---|---|---|
| Amount Computed by Staff | $23,501,356 | $24,072,167 | $24,683,271 |
| Less Staff Adjustment for Cost of Abandoning Property | 1,162,710 | 1,162,710 | 1,162,710 |
| Amount Recommended by Staff | 22,338,646 | 22,909,457 | 23,520,561 |
| Less: Unrecorded Retirements | 311,060 | 311,060 | 311,060 |
| Unretired Labor on Transmission Line Replacements | 272,693 | 272,693 | 272,693 |
| Change in Depreciation Rate for Gas Well Equipment | 566,771 | 587,881 | 608,792 |
| Total Adjustments | 1,150,524 | 1,171,634 | 1,192,545 |
| Required Depreciation and Depletion Reserve | $21,188,122 | $21,737,823 | $22,328,016 |

The required depletion and depreciation reserve, as we have determined it upon the record, is the best evidence of the measure of actual existing depletion and depreciation, and it will be deducted from the actual legitimate cost of the Company's property for rate-making.[24] The reserve re-

[24] See *Re Long Island Lighting Co.*, 18 P. U. R. (N. S.) 65, 146-151, 189-191; aff. 249 App. Div. 918, 292 N. Y. S. 807, 809, 18 P. U. R. (N. S.) 225, 226; *Re Rochester Gas & Electric Corp.*, 33 P. U. R. (N. S.) 393, 489, 502-3; National Association of Railroad and Utilities Commissioners, Proceedings of Fiftieth Annual Convention (1938) pp. 473-4.

quirement on any selected date is the total of the annual provisions for depletion and depreciation less the actual retirements of property. The method used here determines the amount required annually to reimburse the Company for property consumed in service, and it results in a correlation of the annual expense and the accumulated reserve. The method is just and consistent for each operating period because the costs utilized are matched with the revenues produced by the property in service.

As we have noted, the Company has built up an excessive reserve by charging large annual allowances for depletion and depreciation to operating expenses in the past.

The book reserve for interstate plant at the end of 1938 amounted to about $39,000,000 which is $18,000,000 in excess of the amount we determined as the reserve requirement. In addition, twice in the past the Company has transferred amounts aggregating $7,500,000 from the depreciation and depletion reserve to surplus. When these latter adjustments are taken into account, the excess becomes $25,500,000, which has been exacted from the rate payers over and above the amount required to cover the consumption of property in the service rendered and thus to keep the investment unimpaired. *Lindheimer v. Illinois Bell Tel. Co.*, 292 U. S. 151, 169, 174.

**Estimated Additional Fixed Capital Expenditures.**

To make the rate base figures current, the Company presented an estimate of $8,956,500 in "capital expenditures" which it planned for production, transmission and general plant during 1941, 1942 and 1943. Obviously these proposed gross additions should increase the allowable rate base only to the extent that net actual legitimate cost will be increased. Also, $1,270,000 was estimated for 1943 additions to meet the demands of new or increased business. The Commission has not given direct effect to those ex-

pected 1943 additional revenues in the forecast of revenues for rate-making, so that $1,270,000 will not be included in the rate base. The determination of the estimated increase in net plant cost requires the consideration of additions and retirements of plant and the effect on the depletion and depreciation reserve of future accruals and retirements. Giving due weight to all these factors the increased net actual legitimate cost, averaged for the period 1941-1943, is $1,392,021.[25]

The Company presented a general plan which it has for the construction of a pipe line from West Virginia to Louisiana to supplement its present source of supply of gas and to meet predictable increased demands for natural gas. Due mainly to the shortage of materials caused by this war, the status of that proposed line is so uncertain that it need not be considered in these proceedings. When the proposed line is constructed and definite information is presented concerning its effect on the rate base and net income, the Commission will give the matter timely and appropriate consideration.

---

[25]

| | | |
|---|---|---|
| Estimated Fixed Capital Expenditures 1941-1943 | | $8,956,500 |
| Less: Expenditures in Expectation of New or Increased Business | $1,270,000 | |
| Gross Property Retirements | 2,700,000 | 3,970,000 |
| Estimated Net Change in Plant | | 4,986,500 |
| Deduct: Estimated Net Change in Depletion and Depreciation Reserve—Depletion and Depreciation Accruals 1941, 1942, 1943 | 4,362,500 | |
| Less: Retirement Losses Chargeable against Reserve | 2,160,042 | 2,202,458 |
| Estimated Increase in Net Actual Legitimate Cost | | $2,784,042 |
| Average for the period ($2,784,042 ÷ 2) | | $1,392,021 |

**Other Used and Useful Property**

The Company's geologist grouped the unoperated acreage[26] into three classes: (1) protective acreage within a mile of producing wells comprised 64%; (2) prospective acreage for shallow-sand production within three miles of producing wells comprised 14%; and (3) prospective acreage for deep-sand production within three miles of producing wells comprised the remaining 22%. The total unoperated acreage as of December 31, 1940, was 539,285 acres. The Company has undertaken an extensive drilling program, including deep-test wells, and it is a reasonable expectation that within a few years nearly all of this unoperated acreage will become productive, or will be proved unproductive and cancelled. There is no evidence that Hope has acquired large blocks of unoperated acreage to obtain a monopoly on the source of supply, and there is evidence that all of its unoperated acreage is necessary and useful, or imminently useful, in rendering gas service. The cost of unoperated acreage will be included in the rate base. The Commission finds that the actual legitimate cost of unoperated acreage was $584,382 as of December 31, 1938, $567,152 for the end of 1939, and $566,105 as of December 31, 1940.

**Materials and Supplies Plus Cash Working Capital**

There is no controversy over the amount of materials and supplies required by the Company. The monthly average of materials and supplies on hand is the most accurate measure of the Company's requirements. The Commission finds that $1,228,599 is the necessary average amount for materials and supplies in 1939, 1940 and the future. This is sufficient, on the average, to meet requirements for more than a year.

---

[26] Operated gas acreage is any acreage that is being drained by producing gas wells and all other acreage is considered as unoperated. Hope has held less than two unoperated acres to one operated acre during the last ten years.

A witness for the Company used a period of 45 days as the lag in the receipt of revenues. He stated that 45 days of operating expenses, including gas purchased, would measure the cash working capital required by the Company on a practical operating basis and he computed the amount to be $1,754,008.

A period of 45 days is ample to measure the amount of cash required for payment of operating expenses. Cost of gas purchased must be excluded from the computation because revenues from gas sales are received before the payment for purchased gas is due. The Company has approximately $500,000 on hand at all times representing taxes which are not paid until many months after they are accrued and these tax funds are available for bank balances and working capital requirements. The Commission will allow cash working capital in the amount of $871,401 for 1939 and $896,401 for 1940. This is the maximum allowable amount computed on 45 days of operating expenses, excluding cost of gas purchased, and allowing prepaid expenses in full.

The Commission finds that $2,100,000 was required for materials and supplies and cash working capital in 1939, and that $2,125,000 was necessary for 1940 and will be adequate for the future.

**Conclusions With Respect to the Rate Base**

There is a further matter with respect to plant investment which the Commission will consider before making the final determination of the rate base. Prior to January 1, 1939, the Company charged all administrative and general costs to operating expense. Beginning January 1, 1939, the Company tentatively adopted the practice of capitalizing a portion of its administrative and general expenses. This discretion by the management is permissible under the Commission's Uniform System of Accounts. This tentative capitalization of administrative and general expenses was

reconsidered by the Company and it has informed the Commission that it wishes to resume the regular practice of including all general and administrative costs in operating expenses. This change in the tentative accounting policy is reflected in the verified annual report for 1941 filed with this Commission. The amounts of $79,439 for 1939 and $138,018 for 1940 are removed from plant costs and included in operating expense for the respective years. Theoretically, adjustments to annual depreciation expense and to the reserve requirement should be made on account of the foregoing, but the amounts are so insignificant in a case of this magnitude that no inequity will result from not making them.

The analysis of the evidence which we have discussed with respect to the components of the rate base and our conclusions may be summarized thus:

| | Dec. 31, 1938 | Dec. 31, 1939 | Dec. 31, 1940 | Future |
|---|---|---|---|---|
| Gross Investment in Gas Plant in Service (Exclusive of Distribution Plant, and Property Used to Transport Coke-oven Gas) | $51,207,621 | $51,019,585 | $51,957,416 | $51,957,4 |
| Less: Actual Existing Depletion and Depreciation | 21,188,122 | 21,737,823 | 22,328,016 | 22,328,0 |
| Net Investment | 30,019,499 | 29,281,762 | 29,629,400 | 29,629,4 |
| Add: Net Capital Additions 1941, 1942, 1943 | | | | 1,392,0 |
| Useful Unoperated Acreage | 584,382 | 567,152 | 566,105 | 566,1 |
| Working Capital | 2,100,000 | 2,100,000 | 2,125,000 | 2,125,0 |
| Interstate Rate Base | $32,703,881 | $31,948,914 | $32,320,505 | $33,712,5 |

The Commission, therefore, adopts the foregoing amounts as the interstate rate base for the dates indicated, for the Company's property assembled as a whole and doing business as part of an integrated system. The Commission finds that the rate base for 1939 was the average of the rate base amounts at the beginning and the end of that year or $32,326,398, that the rate base for 1940 was the average of the rate base amounts at the beginning and the end of that year or $32,134,710, and that the rate base for fixing future rates is $33,712,526.

## OPERATING REVENUES AND EXPENSES

For rate-making purposes the Commission has given consideration to the actual operating revenues and expenses of the Company for 1937-1940, inclusive, and has also considered the income statements since 1898. In testing the reasonableness of existing rates the latest experience of the Company, as disclosed by the record, is the closest reflection of the present and future operations.

### Interstate Gas Service Revenues

There is no controversy over the volume of gas sold or the revenues received by Hope. The Commission finds that during the years 1939 and 1940 the interstate gas sales to the five customer companies were as follows:

| | 1939 | | 1940 | |
|---|---|---|---|---|
| | M.c.f. billed | Revenues | M.c.f. billed | Revenues |
| Ohio Gas Company | 33,907,672 | $12,359,500 | 40,376,091 | $14,726,736 |
| Natural Gas Company | 3,864,104 | 1,371,757 | 9,738,612 | 3,457,207 |
| Gas Company | 237,640 | 83,174 | 388,750 | 136,063 |
| tte County Gas Company | 840,398 | 264,725 | 859,106 | 270,618 |
| facturers Light and Heat mpany | 2,500,755 | 787,738 | 2,241,684 | 706,131 |
| | 41,350,569 | $14,866,894 | 53,604,243 | $19,296,755 |

### Interstate Operating Expenses

The Commission has considered the Company's operating expenses as recorded on its books, as claimed for rate-case purposes, and as recommended by the Staff. The subsequently discussed adjustments to the Company's operating expenses are made to the amounts as actually recorded on its books for the years 1939 and 1940.

### Depletion and Depreciation Expenses

The annual allowance for depletion and depreciation included in operating expenses is determined by the same rates and methods used to determine the depletion and depreciation actually existing in plant.

The Commission finds that $392,500 for 1939 and $624,440 for 1940 is the proper allowance for depletion expense. The present and prospective demands upon the production system indicate that production for the year 1940 is the proper guide for future depletion expense and we will allow $624,440 as the average cost of depletion in our determination of the cost of service. (Depletion expense is computed on the unit-of-production, hence it varies with the actual production of gas.)

The record shows that Hope Company's annual depreciation expense has remained relatively stable, the proper amounts for 1939 and 1940 being as follows:[37]

| | 1939 | 1940 |
|---|---|---|
| Production Plant | $351,811 | $349,676 |
| Transmission Plant | 460,267 | 460,245 |
| General Plant | 25,725 | 25,676 |
| Total Depreciation Expense | $837,803 | $835,597 |

The Commission finds that the annual depletion and depreciation allowance required for future operating expenses is $1,460,037.

---

[37] Determined by applying the following straight-line depreciation rates to the average depreciable investment for the year:

| | Rate |
|---|---|
| *Production Plant:* | |
| Structures | 4.17% |
| Field Line Material, Meas. & Reg. Station Equipment | 2.22% |
| Gas Well Equipment | 2.22% |
| *Transmission Plant:* | |
| Main Lines, Rights-of-Way and Meas. & Reg. Station Equipment | 1.56% |
| Structures | 2.50% |
| Compressor Station Equipment | 2.56% |
| *General Plant:* | |
| Structures | 2.17% |
| Office Furniture & Equip. | 4.00% |
| Other Equipment | 3.57% |
| Communication Equipment | 3.85% |

**Exploration and Development Costs**

Section 14(b) of the Natural Gas Act authorizes the Commission to determine the "propriety and reasonableness of the inclusion in operating expenses, capital, or surplus of all delay rentals or other forms of rental or compensation for unoperated lands and leases." Delay rentals paid periodically on natural gas lands to reserve the gas rights for a future supply of gas are included in exploration and development costs. The other costs included are those associated with the drilling of non-productive wells, the abandonment of non-productive leases and the abandonment of projects on which preliminary expenditures were made to determine the gas prospects of available acreage.

The Hope Company, like other companies in the natural gas industry, has followed the conservative practice of charging all exploration and development costs to operating expenses. Exploration and development costs are necessary to replenish the Company's gas supply in order to maintain continued gas service. The Commission has included Hope's gas producing acreage and its useful unoperated acreage at cost in the rate base. The annual depletion allowance is based upon the actual legitimate cost of gas producing leases so there is no margin in that annual allowance to cover exploration and development costs. In fairness to the investors and the rate payers the Commission will make an allowance for delay rentals related to the unoperated acreage and the other exploration and development costs in operating expenses. Hope incorrectly stated the cost of abandoned and surrendered leases in 1939 and 1940 and we find that the cost of leases abandoned should be included in exploration and development costs in the respective amounts of $45,164 for 1939 and $12,422 for 1940. The Company's exploration and development costs were $500,344 in 1939 and $407,920 in 1940. In view of the Company's extensive program for drilling

wells in the next few years and its recent experience with respect to exploration and development costs, the Commission finds that the proper and reasonable future annual allowance for such costs is $600,000 for rate-making purposes.

**Reclassification and Rate Case Expenses**

The Hope Company presented evidence to show that it has spent $675,000 in making reclassification studies in order to comply with the recent Systems of Accounts prescribed by the West Virginia Commission and the Federal Power Commission. The Company also showed expenditures totaling $825,000 as its expenses in this rate case. A contention is made by the Company that it should be allowed an interest rate of 8% on the "unamortized balance" of its reclassification and rate case expenses. In fact, however, the Company has charged all these costs to operating expenses as they were incurred during the years 1938-1941 and the rate payers have already paid enough to reimburse the Company. The Company's interstate wholesale rates have been excessive for several years and the unusually large amount of rate case expenses would ordinarily prompt the Commission to disallow any such expenses to be amortized in the future under the rates the Commission will prescribe because it results in a duplication of charges. But in view of the Supreme Court's statement that even where rates in effect are excessive the utility should be allowed its reasonable expenses for presenting its side to the Commission, the Commission concludes that the rate case expenses and the reclassification expenses, totaling $1,500,000 should be spread over a 10-year period beginning January 1, 1939, by the inclusion of $150,000 annually in operating expenses.[28] The Company has charged rate case and property reclassification

[28] *Driscoll v. Edison Light & Power Co.*, 307 U. S. 104, 120-121.

expenses to operating expenses as incurred in the amounts of $543,121 for 1939 and $624,041 for 1940. Those amounts will be eliminated from operating expenses for rate-making, and the allowance of $150,000 annually for ten years will be made instead.

**Affiliate's Excess Profits From Processing Hope Company's Gas**

Hope Construction & Refining Company, an affiliate, extracts gasoline and other by-products from the natural gas of Hope Natural Gas Company. The extraction of gasoline and butane is profitable and is necessary to make the natural gas marketable and transportable. The process of extracting gasoline and butane reduces the heating value of the natural gas and consumes a certain volume of Hope's natural gas, thus imposing a burden upon the gas business.[29] Much of the gasoline extracted from Hope's natural gas has been sold to the Standard Oil Company at about one-half the price received from sales to others. It is significant that the Hope Natural Gas Company processed its own gas before 1920. The natural gas customers are entitled to be credited with a share of the profit from the processing of Hope's gas, even as they would pay the deficit if that essential processing were not profitable. It is agreed that it is proper to make a credit for a portion of the profits realized by Hope Construction & Refining Company from the processing of Hope's gas, but there is a dispute over the amount of the credit. The Commission concludes that the credit proposed by the Company, being a royalty of ¼ of the gross earnings from the gasoline and butane extracted, is not supported by sufficient evidence. The excess profits of the affiliated company above the cost of processing Hope's gas and a fair rate of return on its investment is the proper credit to Hope Natural Gas

[29] *Re Hope Natural Gas Co.*, P. U. R. 1921E 418, 428-430.

Company. See *United Fuel Gas Co. v. Comm'n*, 278 U. S. 300, 319-321; *Dayton Power & Light Co. v. Comm'n*, 292 U. S. 290, 295. The cost of processing Hope's gas includes all of the affiliated company's related operating expenses, including depreciation expense, taxes, and a liberal 6½% rate of return on the net investment, plus working capital, devoted to the processing function. The affiliated company's extraction plants are usually located near Hope's compressor stations. The Commission finds that Hope should have received payments of $117,641 in 1939 and $119,592 in 1940 for the steam and boiler fuel which it furnished its affiliate at the extraction plants, and that the gas vapors which are returned to Hope after processing belong to Hope as part of its natural gas. From the record we find that Hope Construction & Refining Company had the following average net investment and required working capital devoted to processing Hope's natural gas:

| | 1939 | 1940 |
|---|---|---|
| Gross Investment | $1,716,145 | $1,696,510 |
| Depreciation Reserve Requirement | 1,208,739 | 1,260,312 |
| Net Investment | 507,406 | 436,198 |
| Working Capital | 80,000 | 80,000 |
| Average Net Investment | $ 587,406 | $ 516,198 |

The Commission finds that Hope's affiliate has earnings from the processing of gas in excess of a fair return and that these excess profits are applicable as reductions of Hope's operating expenses. For 1939 and 1940 these excess profits are determined as follows:

| | 1939 | 1940 |
|---|---|---|
| Gasoline and Butane Revenues | $791,451 | $770,028 |
| Related Operating Expenses | 518,394 | 551,370 |
| Net Processing Income | 273,057 | 218,658 |
| Return at 6½% on Net Investment Plus Working Capital | 38,181 | 33,553 |
| Excess Profits | $234,876 | $185,105 |

In prescribing future rates the affiliate's excess profits for 1940 will be employed as a conservative measure of Hope's portion of the profits from the gasoline and butane extracted from its gas.

**Other Adjustments to Operating Expenses**

Hope furnishes management services to several affiliated companies at cost, and credits the proceeds to miscellaneous gas revenues thereby permitting the cost of those services to others to remain in its operating expenses. The Commission, therefore, finds that operating expenses should be reduced $192,415 for 1939 and $109,194 for 1940 for the cost of services billed to others in order to reflect actual net operating expenses.

Hope furnishes natural gas to Hope Construction & Refining Company for use in repressuring oil wells. The gas is returned to Hope's system at reduced pressures. An amount of 2½¢ per m.c.f. is regarded as the cost of recompressing the natural gas returned to the Hope Company. Hope records these transactions as sales and purchases of natural gas and that practice overstates both revenues and expenses. The Commission finds that operating expenses and revenues should be reduced $72,388 for 1939 and $73,644 for 1940 to eliminate duplication of cost in production and transmission expenses.

The Company has eliminated the property and expenses relating to the transportation of coke-oven gas used as fuel at its Hastings Compressor Station and in its figures has substituted the cost of an equivalent amount of natural gas priced at 22¢ per m.c.f. The Commission agrees with the Company and finds that $295,158 for 1939 and $333,036 for 1940 should be eliminated from operating expenses, and that $107,758 for 1939 and $126,000 for 1940 should be included in operating expenses to reflect the equivalent cost of natural gas for the quantity of coke-oven gas used as fuel in the Hastings Station.

Hope furnishes steam from its compressor stations without charge to Hope Construction & Refining Company

for use in the extraction plants, with the exception of the steam furnished from Goff Compressor Station, and does not record this transaction on its books. The necessary adjustment for this free steam has been made by the Commission. The Company credits revenue instead of expenses with the value of steam furnished by its Goff Station, thereby overstating both gas service revenues and the cost of compressing natural gas. The Commission, therefore, finds that operating expenses should be reduced $4,404 for 1939 and $6,000 for 1940 to state the actual cost of operation.

Hope bills the Peoples Natural Gas Company at the rate of 38.5¢ per m.c.f. for the natural gas sold and includes the gross amount of the billings in revenues. The Peoples Company must compress that gas to transport it to market, so Hope refunds 3¢ per m.c.f. to Peoples under the provision of the sales contract and includes this amount in its operating expenses as a cost of compressing gas. This accounting practice followed by Hope overstates the actual revenues and overstates the actual operating expenses. The Commission finds that the cost of compressing gas has been stated incorrectly and that operating expenses should be reduced $115,923 for 1939 and $292,158 for 1940.

Certain donations were included by the Company in Administrative and General Expenses. The Commission finds that donations amounting to $5,183 for 1939 and $3,496 for 1940 are not allowable costs for purposes of rate-making and should be deducted from operating expenses.

The Company has included $10,926 for the settlement of a claim for damages and $16,318 to meet a deficiency in its insurance plan for employees in general expenses for the year 1939. These expenses are applicable to prior years' operations and therefore not allowable for 1939.

Hope recorded the salvage received from an experimental liquefying gas plant as revenues in the amount of $23,896. That amount should have been applied as a

reduction of the cost of the experiment, which cost was charged to 1940 operating expenses. Therefore, the Commission finds that 1940 operating expenses should be reduced $23,896.

**State and Miscellaneous Federal Taxes**

The Company has included in taxes for the years 1939 and 1940 certain amounts which should not have been included, and has failed to include certain other amounts which should have been included. The following table shows the amounts:

| Taxes Not Applicable | 1939 | 1940 |
|---|---|---|
| Taxes applicable to prior years | $23,349 | $17,099 |
| W. Va. taxes billed others | 10,768 | 41,334 |
| Taxes not applicable to gas operations | 2,741 | 3,218 |
| | 36,858 | 61,651 |
| **Taxes Applicable** | | |
| Underaccrual of taxes | 16,548 | 313 |
| Net Tax Adjustment | $20,310 | $61,338 |

The Company has over-accrued Federal Income taxes on its books and the Commission has made a deduction of $33,479 for 1939 and $16,480 for 1940 to reflect the taxes actually paid which were $191,521 for 1939 and tentatively reported to be $912,313 for 1940.

**Specific Distribution Expenses**

The Commission finds that certain amounts included in depreciation, administrative and general expenses, and taxes are specific distribution costs, as follows:

| | 1939 | 1940 |
|---|---|---|
| Depreciation | $ 82,000 | $ 89,345 |
| Taxes | 126,981 | 141,640 |
| Administrative and General | 17,237 | 13,231 |
| Total | $226,218 | $244,216 |

## Operating Expenses Summary

The total of the Commission's adjustments to operating expenses per books results in a reduction of $1,186,002 for the year 1939 and a reduction of $1,199,958 for the year 1940, and they are summarized as follows:

| | 1939 | 1940 |
|---|---|---|
| **Decreases in Operating Expenses:** | | |
| Excess Profits on Gasoline and Butane | $ 234,876 | $ 185,103 |
| Steam Furnished H. C. & R. Co. | 117,640 | 119,592 |
| " " " —Goff Station | 4,404 | 6,000 |
| Refund to the Peoples Nat. Gas Co. for compressing gas | 115,923 | 292,158 |
| Gas used in repressuring oil wells | 72,388 | 73,644 |
| Management Fees and Expenses | 192,415 | 109,194 |
| Excess Cost of Coke-oven gas | 187,400 | 207,036 |
| Donations | 5,183 | 3,496 |
| Salvage from Liquefying Gas Experiment | — | 23,896 |
| Taxes | 20,310 | 61,338 |
| Income Tax | 33,479 | 16,480 |
| Reclassification and Rate Case Expenses | 543,121 | 624,041 |
| Expenses applicable to Reserve Gas Co. | 125 | — |
| Expenses applicable to prior years | 27,244 | — |
| Total Decreases | 1,554,508 | 1,721,978 |

| | 1939 | 1940 |
|---|---|---|
| **Increases in Operating Expenses:** | | |
| Abandoned Leases | $ 45,164 | $ 12,422 |
| Adm. & General Expenses Capitalized in error | 79,439 | 138,018 |
| Depletion and Depreciation | 93,903 | 221,580 |
| Reclassification and Rate Case Expenses | 150,000 | 150,000 |
| Total Increases | 368,506 | 522,020 |
| Total Adjustments | $1,186,002 | $1,199,958 |

The functional classification of operating expenses per books and after the application of the foregoing adjustments follows:

| Operating Expenses | 1939 | | 1940 | |
|---|---|---|---|---|
| | Per Books | Allowed | Per Books | Allowed |
| ıte Operating Expenses: | | | | |
| d Gas Production | $ 1,439,971 | $ 1,186,578 | $ 1,427,594 | $ 1,227,930 |
| Purchased | 7,746,854 | 7,675,105 | 8,605,981 | 8,533,779 |
| ission Expenses | 1,906,993 | 1,481,833 | 2,437,381 | 1,818,335 |

## Future Operating Expenses

The operating expenses as determined for the purpose of estimating the future cost of interstate service are based primarily on the actual operating cost for the year 1940, the latest available data in the records. That year reflects an increase of $2,300,000 over the operating expenses of 1939 and is the best guide to present and future costs.

The Commission finds that the following adjustments of 1940 costs are reasonable and proper for the purpose of estimating future operating expenses for rate fixing:

| | | |
|---|---|---|
| Increase in wages not reflected in 1940 operating costs | | $202,172 |
| Increase in West Virginia property taxes not reflected in 1940 operating costs | | 81,751 |
| Decrease due to the following non-recurring costs which were included in administrative and general expenses for 1940: | | |
| Cost of moving Company office from Pittsburgh, Pa. to Clarksburg, W. Va. | $41,750 | |
| Experimental liquefying gas plant | 8,492 | |
| Pennsylvania State income tax | 4,601 | |
| Decrease | | 54,843 |
| Increase in Exploration and Development costs to allow an average amount of $600,000 annually in the future costs | | 192,080 |
| Total net increase over 1940 operating expenses | | $421,160 |

**Federal Income Tax**

In accord with practice, Hope's income tax return for 1940 was prepared on a tentative basis. The evidence in the record shows that the net taxable income was approximately $3,801,304 for 1940 and was $1,160,733 for 1939, that the tax rate was 24% for 1940 and 16.5% for 1939, and that the income tax was approximately $912,313 for 1940 and was $191,524 for 1939.

The Company does not report operating revenue deductions for tax purposes the same as it records them on its books.[39] Adjustments for rate-making and accounting purposes do not affect operating expenses for tax purposes, because that amount is determined by the administration of the federal Revenue Acts. The complete effect of all Commission adjustments is shown by any increase or decrease in revenues which results from a rate order. In order to determine a reasonable allowance for income taxes it is

[39] The net income per books in 1940 was $5,234,175 after book income taxes of $928,793 or $6,162,968 before income taxes. The net taxable income for that year was $3,801,304 showing that Hope claimed $2,361,664 for tax deductions not reflected in operating expenses on its books.

necessary only to apply the proper tax rate to the net taxable income applicable to the test year and to give effect to any tax saving or increase by reason of a change in revenue due to a rate order.

A combined normal and surtax rate of 40% is being discussed in Congress. We will use that rate for the purpose of computing the future income tax allowance. Based on 1940 net taxable income of $3,801,304 the income tax would be $1,520,522 at a 40% tax rate.

Each dollar of the indicated reduction in gross revenues will result in a reduction of forty cents in income taxes. The following computation shows the indicated reduction in rates and the amount of income taxes by applying the rate of return found to be fair and which is discussed in the subsequent section:

| | Before Income Tax Saving | After Income Tax Saving |
|---|---|---|
| Operating Revenues from Interstate Sales | $19,296,755 | $15,686,898 |
| Deductions: | | |
| Interstate Operating Expenses (Excluding income taxes) | 16,196,355 | 16,196,355 |
| Other Gas Revenues | ( 83,275) | ( 83,275) |
| Allocation of costs to local West Va. Sales[31] | ( 2,694,075) | ( 2,694,075) |
| Federal Income Tax at 40% | 1,520,522 | 76,579 |
| Net Operating Revenue from Interstate Sales | $ 4,357,228 | $ 2,191,314 |
| Return at 6½% on Interstate Rate Base of $33,712,526 | 2,191,314 | |
| Excess Earnings before Income Tax Saving | 2,165,914 | |
| Income Tax Saving | 1,443,943 | |
| Excess Earnings after Income Tax Saving | $ 3,609,857 | |

[31] Computed as follows:

| | | |
|---|---|---|
| West Virginia Operating Revenues | | $3,435,675 |
| Specific Distribution Expenses | $ 620,252 | |
| Return at 6½% on Distribution Property | 121,348 | 741,600 |
| Allocation of costs to W. Va. Sales | | $2,694,075 |

The Commission finds that the amount of $76,579 is an adequate allowance for Federal Income taxes for the future.[32]

The operating expenses allowed for the future are shown by the functional classification in the following tabulation:

| | 1940 | Adjustments For Future Operating Changes | As Adjusted For Future |
|---|---|---|---|
| **Interstate Operating Expenses:** | | | |
| Natural Gas Production | $ 1,227,930 | $ 202,172 | $ 1,430,102 |
| Gas Purchased | 8,533,779 | | 8,533,779 |
| Transmission Expenses | 1,818,335 | | 1,818,335 |
| Administrative and General Expense | 1,187,336 | ( 50,242) | 1,137,094 |
| Depletion | 624,440 | | 624,440 |
| Depreciation | 835,597 | | 835,597 |
| Amortization—other | 5,996 | | 5,996 |
| Exploration and Development Costs | 407,920 | 192,080 | 600,000 |
| Taxes—State and Misc. Federal | 1,133,892 | 77,150 | 1,211,042 |
| Federal Income Tax | 912,813 | (835,734) | 77,079 |
| Total Interstate | 16,687,508 | (414,574) | 16,272,934 |
| **Specific Distribution Expenses:** | | | |
| Distribution | 215,128 | | 215,128 |
| Customers' Accts., Coll. & Sales Promotion | 160,908 | | 160,908 |
| Adm. and Gen. Expense | 13,231 | | 13,231 |
| Depreciation | 89,345 | | 89,345 |
| Taxes | 141,640 | | 141,640 |
| Total Distribution | 620,252 | | 620,252 |
| Total Operating Expenses | $17,307,760 | $ 414,574) | $16,893,186 |

[32] Computed as follows:

| | |
|---|---|
| Net Taxable income for 1940 | $3,801,304 |
| Reduction in revenues | 3,609,857 |
| Revised Net taxable income | 191,447 |
| Tax Rate | 40% |
| Allowance for Income Tax | $ 76,579 |

## RATE OF RETURN

Many factors enter into the determination of what constitutes a fair rate of return in each rate case. The Supreme Court has stated the principal factors in *Bluefield Water Works & Improvement Co. v. Pub. Serv. Comm.*, 262 U. S. 679, 692-3. They are that the return of a public utility shall be equal to that generally being made at the same time and in the same region on investments in other enterprises attended by corresponding risks and, that the return should be sufficient to assure confidence in the financial soundness of the utility and to maintain its credit and enable it to attract the capital necessary for the proper discharge of its public duties.

The record contains an abundance of evidence on the subject of rate of return. The information includes investors' appraisal of the natural gas industry, comparative risk data, interest rates and yields on securities of natural gas and electric utilities, statistics showing the growth and stability of the natural gas industry, the trend of the cost of money and its current cost, commodity price indices, industrial production, employment, and payroll indices, federal reserve bank rediscount rates, national income payments and other economic data, idle money statistics, the financial history of the Hope Company and the facts about recent financing by its parent Standard Oil Company. That evidence reveals unmistakably that, compared to industrial and railroad enterprises, the utility business has relatively greater stability. Moreover, it shows also that interest rates generally are now lower than they have ever been in this century; it discloses that the yields on better issues of natural gas company bonds sold in the last year or two are close to 3%.

The Company's contention that it should be allowed a rate of return not less than 8% is unreasonable. The record shows that the Hope Company is a seasoned enterprise whose risks have been minimized by (1) ample past and present provisions for depletion and depreciation with con-

current high profits; (2) protected established markets, through affiliated distribution companies, in populous and industrialized areas; and (3) available supplies of gas locally to meet requirements, except on certain peak days in the winter, which it is feasible to supplement in the future with gas from other sources. During the forty-two years of its history, to 1941, Hope has earned on its owners' equity an annual average profit of 12% and, in addition, has built up through annual provisions charged to expense, depletion and depreciation reserves far in excess of requirements. Hope faces no hardship with respect to increased taxes, operating expenses, and inflation, greater than those faced by similar enterprises. The Company's efficient management, established markets, financial record, affiliations, and its prospective business place it in a strong position to attract capital upon favorable terms when it is required.

In making the findings on rate of return, the national and international situations have commanded our attention and entered our deliberations. The Commission is aware of the increased demands made upon Hope for gas due to the war program. Considering these matters, the underlying factors, and all of the evidence in the record, the Commission finds that 6½% is the fair rate of return for the Hope Natural Gas Company. This rate of return being for the future, has been set only after endeavoring to weigh all known and predictable elements; in setting it we have made allowance for presently unforeseeable contingencies. Our views on the subject of rate of return are consonant with recent decisions by the Supreme Court and other courts and commissions involving natural gas companies.[33]

## LAWFULNESS OF PAST RATES

In 1938 the Cities of Cleveland and Akron, Ohio, filed complaints with the Federal Power Commission alleging that the rate which Hope charged East Ohio Gas Company was unjust, unreasonable and unlawful. These complaints were registered before Hope filed its five interstate wholesale rate schedules which are involved in these proceedings. The acceptance of a rate schedule for filing does not mean that the Commission approves it, and does not establish the justness or reasonableness of the rate. *Re Home Gas Co.*, 39 P. U. R. (N. S.) 102, 109. On October 14, 1938, this Commission instituted an investigation of the reasonableness of all of Hope's interstate rates. If it had been possible to adduce the volume of evidence required for the disposition of such a complex matter within a few months, the Commission would have prescribed the reasonable interstate wholesale rates for 1939 and subsequent years. The City of Cleveland raised the issue of the lawfulness of the rate charged by Hope to the East Ohio Gas Company and asked this Commission, as an aid to State regulation, to make a separate determination of the reasonable rates since June 30, 1939. Originally the City of Cleveland requested this Commission to find the lawful Hope-East Ohio rates since June 21, 1938, but it now represents that the subject is idle for rates prior to June 30, 1939, because those rates which Cleveland consumers were obligated to pay East Ohio have been settled. The Commission does not have the authority to fix rates for the past and to award reparations. But Congress did empower and instruct the Commission in Section 5(a) of the Natural Gas Act to fix future rates, and as a step in that process we must necessarily consider the reasonableness of past and existing rates. When the issue is raised and the public interest will be served, we consider as a necessary part of that duty the power to examine the entire rate problem involved and to determine what rates were lawful in the past. Also, Section 14(a) of the Act authorizes the Commission to investigate any facts

which it finds necessary in order to determine whether Hope has violated any provision of the Natural Gas Act. Furthermore, the Commission has power to perform any act, pursuant to Section 16, which is necessary or appropriate to carry out the provisions of the Act. Under Section 4(a) of the Act any interstate wholesale rate that is not just and reasonable is unlawful. *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. .... Hope's rate collected from East Ohio Gas Company was lawful after June 21, 1938, the effective date of the Act, only to the extent that it was just and reasonable. The City of Cleveland states that the Ohio Commission is investigating the reasonableness of the East Ohio Gas Company's bonded retail rates in Cleveland for the period since June 30, 1939, and that the lawfulness of Hope's rate is an important factor in the case. Since the enactment of the 1938 Natural Gas Act this Commission has had exclusive jurisdiction to determine the lawfulness of the interstate wholesale rates charged by Hope and other natural gas companies.[34]

In response to the request of the City of Cleveland, the Commission will make the appropriate findings of fact as to the lawfulness of the rates charged East Ohio by Hope since June 30, 1939. The Interstate Commerce Commission has furnished precedents for the performance of this public duty.[35] Congress intended that this Commission cooperate with State Commissions and municipalities, and the provisions of Sections 5(b) and 17 are special evidence of such intent.

## REASONABLE EARNINGS AND RATES FOR THE FUTURE

Future reasonable earnings and rates must be fixed with consideration of a forecast of operating revenues and expenses. The most recent experience of the Company is the best guide for prognostications. The President of the Company predicted a great increase in sales for 1941 over 1940. Comparative income figures for the first quarters of 1940 and 1941 show an increase of $592,000 in net operating income or about 20%. The increasing demands for natural gas in the industrialized areas of Hope's markets are common knowledge. It seems certain that 1940 will be the lowest year, on an earnings basis, of the 1940-1944 period. Upon a consideration of all the relevant facts in the record and the future prospects, the Commission finds that 1940 is a conservative "average" year and should be used in rate-making in these proceedings. This is a conservative basis because allowance will be made for all probable future increases in the rate base and operating expenses while the operating revenues for the relatively low year of 1940 are employed as the test in fixing rates for the future.

Applying the 6½% rate of return to the rate base for the future of $33,712,526, produces $2,191,314 as the amount of annual return which the Company is entitled to earn in the future. Hope's income available for return is not less than $5,801,171, so the excess of $3,609,857 is the sum by which existing revenues must be reduced.

Hope's gas sales revenues are classified between intrastate sales and interstate sales for purposes of determining the sales and rates subject to the jurisdiction of this Commission.

Hope's entire properties are located within the State of West Virginia and production, transmission, compressing and general facilities are used jointly for intrastate or local sales and interstate or export sales. Therefore, a classification or allocation is necessary to deter-

mine operating expenses and return applicable to the interstate business. Certain direct costs pertaining to distribution property and sales in West Virginia are easily segregated from the joint costs. The allocation of the remaining joint costs is made in accordance with the following facts and principles which are undisputed in the record and accepted by all parties to these proceedings.

The Company's local retail business in West Virginia is incidental to its major business of exporting gas from West Virginia. In determining the allocation of joint expenses to the local West Virginia business, this fact was given consideration, with the result that a smaller amount of expenses was allocated to that business than would have resulted by the application of one of the customary allocation methods. Briefly, the amount of joint expenses (including return) allocated to the local business was that amount which, together with the specific local expenses, would give the Company a 6½% return on the net investment in property used exclusively in the local business. As indicated above, a more orthodox allocation probably would have resulted in assigning a larger share of the joint costs to the West Virginia sales and a greater amount of the excess profit, although the amount would not be material, to the interstate sales. The method used was proposed by representatives of the Company and was not controverted.

The following schedule (Col. (c)) shows the excess of future net operating revenue over 6½% return on the interstate rate base, and Columns (d) and (e) show the prescribed rates and revenues after giving effect to the rate reduction:

## Net Operating Income Available For Return

Rate Base for Interstate Sales $33,712,526

| | M.c.f. | Before Reduction | After Reduction | |
|---|---|---|---|---|
| | | | Prescribed Rates M.c.f.—cents | Amount |

| Allocation of Costs to Local West Virginia Sales | | (2,694,075) | | (2,694,075) |
| Total Deductions from Interstate Revenues | | 13,495,584 | | 13,495,584 |
| Net Operating Income from Interstate Sales | | 5,801,171 | | 2,210,653 |
| 6½% Return on Interstate Rate Base | | 2,191,314 | | 2,191,314 |
| Excess of Future Net Operating Income over 6½% Return on Interstate Rate Base | | $ 3,609,857 | | $ 19,341[36] |

The Company's intrastate rates are under the jurisdiction of the Public Service Commission of West Virginia. The West Virginia Commission and the State of West Virginia are interveners in these proceedings and no objection was made by them to the method used herein for the allocation of cost to local operations in West Virginia.

The evidence on the cost of service allocated among the five customer companies and the conditions of service for the respective companies disclose that no reduction in rates is applicable to the affiliated River Gas Company.

[36] It is not considered necessary to refine average rates per m.c.f. more than the prescribed rates shown above and the result is the margin of $19,341.

Among other reasons for this determination, is the fact that the River Gas Company is a small company and has a poor load factor. Accordingly, the total amount of the reduction in interstate rates [illegible] applicable to the East Ohio Gas Company, Peoples Natural Gas Company, Fayette County Gas Company and the Manufacturers Light and Heat Company. The present average rates per m.c.f. are 36.5¢ for East Ohio Gas Company, 35.5¢ for the Peoples Natural Gas Company, 35¢ for the River Gas Company, and 31.5¢ for Fayette County Gas Company and the Manufacturers Light and Heat Company.

The conditions and characteristics of service required by the contracts, are similar for the East Ohio Gas Company and the Peoples Natural Gas Company with respect to obligations and priorities by classes of consumers, but there is a great difference with regard to delivery pressures. Hope Company delivers gas to the East Ohio Company at sufficiently high pressures so that no additional compression is required by the East Ohio Company for delivery of the gas to the ultimate consumers. On the other hand, Hope delivers gas to the Peoples Natural Gas Company, at various pressures, into that company's Brave Compressor Station and the Peoples Company must compress the gas for transportation to the ultimate consumers. From the evidence we conclude that the differential of one cent between the average price per m.c.f. for gas sold to the East Ohio and the Peoples Companies is reasonable, and it reflects the difference in the cost, conditions and characteristics of service.

Considering the cost of rendering service to the Fayette County Gas Company and the Manufacturers Light and Heat Company, and the conditions and characteristics of service to those companies, the fact that Hope knows precisely what deliveries it must make to them from day to day and the fact that those two companies buy less than 6% of the total gas sold by Hope, the Commission

finds that the rate for these companies should not be different from the rate paid by the Peoples Natural Gas Company. In the absence of compelling reasons to the contrary, it is good and desirable practice to fix rates that are uniform. Applying this principle in these proceedings the Commission will prescribe uniform rates for the Peoples Natural Gas Company, Fayette County Gas Company and the Manufacturers Light and Heat Company.

After considering all the evidence with respect to Hope's interstate wholesale rates and the proper average rates per m.c.f. for the five customer companies at the respective points of delivery, the Commission finds the following rates to be just and reasonable:

| | Average Rate Per M.c.f.—Cents |
|---|---|
| East Ohio Gas Company | 29.5 |
| Peoples Natural Gas Company | 28.5 |
| Fayette County Gas Company | 28.5 |
| Manufacturers Light and Heat Company | 28.5 |
| River Gas Company | 35.0 |

In passing, it might be noted that the over-all rate of return for 1940 would have been 8% if the new rates had been in effect that year and if the earnings from the distribution property had remained unchanged. This rate of return is reduced to 6½%, because of estimated increase in expenses and increase in rate base which we have allowed for the future.

Appropriate findings and order will be entered in accordance with this Opinion.

## MOTION OF RESPONDENT, THE CITY OF AKRON, TO DISMISS PART B OF PETITION FOR REVIEW.

---

The City of Akron, a respondent in the above entitled cause, moves this Honorable Court to dismiss Part B of the Petition for Review filed herein on the ground that the Court has no jurisdiction under Section 19 (b) of the Natural Gas Act (52 Stat. 831; 15 U.S.C.A. 717r (b)) to review the "Findings as to Lawfulness of Past Rates" entered by respondent, Federal Power Commission, on May 26, 1942. These "findings" do not constitute an

"order" within the meaning of Section 19 (b) of the Natural Gas Act.

HOPE NATURAL GAS COMPANY, PETITIONER

*versus*

FEDERAL POWER COMMISSION, CITY OF CLEVELAND, CITY OF AKRON, AND PENNSYLVANIA PUBLIC UTILITY COMMISSION, RESPONDENTS

On Pefition for Review of Orders of the Federal Power Commission

(Argued November 18, 1942. Decided February 16, 1943)

*Opinion*

Filed February 16, 1943

Before PARKER, SOPER and DOBIE, Circuit Judges

William B. Cockley (Walter J. Milde, Theodore R. Colborn, William A. Dougherty, Kemble White and Anthony F. McCue on brief) for Petitioner, and Milford Springer, Counsel for the Federal Power Commission, and Spencer W. Reeder, Assistant Director of Law in Charge of Utility Controversies for the City of Cleveland, (Charles V. Shannon, Louis W. McKernan and Howell Purdue, of counsel for the Federal Power Commission; Thomas A. Burke, Jr., Director of Law for the City of Cleveland; Robert E. May; Alexander W. Parker and Joseph M. Winston, Jr., Attorneys for City of Cleveland; A. F. O'Neil, Director of Law, and Clyde B. Macdonald, Assistant Director of Law for the City of Akron, Attorneys for City of Akron; Claude T. Reno, Attorney General of the State of Pennsylvania; Harry M. Showalter, Counsel, and Samuel Graff Miller, Assistant Counsel, Attorneys for Pennsylvania Public Utility Commission, on brief) for Respondents.

PARKER, Circuit Judge: This is a petition by the Hope Natural Gas Company, hereafter referred to as "Hope", to review an order of the Federal Power Commission under the provisions of sec. 19 (b) of the Natural Gas Act of June 21, 1938, 52 Stat. 831, 15 USCA 717 r (b). Hope, a subsidiary corporation of the Standard Oil Company of New Jersey, was organized under the laws of West Virginia in the year 1898 and since that time has been engaged in the production, transportation and sale of natural gas. 80% of its sales are in interstate commerce and are subject to the

jurisdiction of the Commission, but its interstate rates had not been regulated prior to this proceeding. In 1938 the cities of Cleveland and Akron, Ohio, filed complaints with the Commission alleging that the rates charged by Hope to the East Ohio Gas Company were unreasonable. The Pennsylvania Public Utility Commission filed complaints that the rates charged to the Peoples Natural Gas Company, the Fayette County Gas Company and the Manufacturers Light and Heat Company were also unreasonable. The Commission then instituted an investigation, on its own motion, into the reasonableness of all of Hope's interstate wholesale rates; and all of the proceedings relating to these rates were consolidated for hearing before the Commission.

On May 26, 1942, the Commission filed its opinion, findings and order holding that the rates charged since June 30, 1939 were unreasonable and establishing reduced rates for the future, the reduction ordered being approximately 20% in the rates charged the East Ohio Gas Company and the Peoples Natural Gas Company, both Standard Oil affiliates, to which by far the larger part of its sales were made. The rates to these companies were reduced from 36.5 and 35.5 cts. per m. c. f. to 29.5 and 28.5 cts. per m. c. f. respectively. Rates to two other companies, Fayette and Manufacturers, representing a small volume of the total sales, were reduced from 31.5 cts. to 28.5 cts.

The reductions in rates were ordered on the basis of findings made as to the value of Hope's property used in connection with its interstate business, the estimated operating expenses of the business and a rate of return upon investment of 6½%. Hope complains of the findings with respect to all of these matters but particularly with respect to the valuation of the property adopted as the rate base. The valuation adopted by the Commission as the rate base was arrived at by taking the cost of the property as shown by the books of the company, corrected for bookkeeping errors but without allowance for price increases or consideration of capital items theretofore charged to expenses, and deducting therefrom accrued depreciation based upon the estimated useful life of the property employed without reference to evidence as to its present condition based upon tests and observation. This method was applied to property taken over from other companies as well as to property originally purchased by Hope. The corrected book cost of the property was found to be $51,957,416, and depreciation was found to be $22,328,016 as of December 31, 1940, leaving a net investment of $29,629,400. To this was added $1,392,021 for net capital additions up until the effective date of the order, $566,105 for useful unoperated acreage and $2,125,000 for working capital. This gave a rate base of $33,712,526.

Hope introduced evidence to the effect that prior to 1923 labor costs in well drilling as well as the portion of the overhead expense of the company allocable thereto had been treated as expense in its bookkeeping entries, instead of being charged to capital account; that these items were a legitimate part of the cost of the property and present expenditures of like character were required to be so treated in the system of accounting prescribed by the Commission; that the items representing such expenditures prior to 1923 should be considered by the Commission as a part of the legitimate cost of the property notwithstanding they had been charged to expense; and that, when they were so considered, the cost of the property was shown to be $69,735,000, instead of $51,957,416.

It was shown that the property used by Hope in its interstate business had been constructed over a forty year period during which there had been great fluctuations in prices and that prices at the time of hearing were at a far higher level than they were during the years preceding the first world war. The Public Utilities Commission of Ohio had found the reproduction cost new of the property, as of June 30, 1937, to be $100,257,000 and its present value after depreciation to be $66,166,382.* Hope introduced an estimate of cost of reproduction new amounting to $97,340,000 and a statement showing that the application of price trends to original cost would result in a figure of $105,101,000. This price trend statement showed that for property placed in public service between 1891 and 1916 at an original cost of $25,249,550 the price trends gave a figure of $52,451,675, whereas for property placed in service between 1917 and 1938 at a cost of $45,303,889 the trended value was only $53,788,551. Hope contended that the allowance for depreciation should have been based on the actual condition of the property as determined by observation with allowance for obsolescence; and that the depreciation allowance resulting was 34.51%. Applying this rate of depreciation to the estimate of the cost of reproduction new of its property, it arrived at a rate base as of December 31, 1938, of $66,360,000.

The Commission found that Hope's estimates of reproduction cost and trended original cost were without probative value and disregarded them, as it did also Hope's evidence as to the observed condition of the property. No consideration was given to the change in price levels which was shown by the estimates and which, even in their absence, might have been noticed as matters of general and common knowledge.

*East Ohio Gas Co. v. City of Cleveland, 27 P. U. R. (N. S.) 387, 417. See also table 6 appended to report of Commission in that case but not published in Public Utilities Reports.

The vital questions in the case relate to the determination of the rate base; and, in view of the low rate of return allowed and the consequent lack of margin to take care of error in the base, the rates allowed must be condemned as unreasonable and confiscatory because of the following errors with respect to the valuation of the property constituting the base: (1) the Commission did not find the present fair value of the property and took no account of the change of price levels in determining the rate base; (2) the Commission ignored items of well drilling costs and overhead, aggregating in excess of $17,000,000, which entered into the original cost of the property, basing this action on the fact that, under the system of accounting that prevailed at the time, these items had been charged on the company's books to expense; and (3) the Commission ignored evidence as to the present condition of the property and computed accrued depreciation theoretically on the straight-line service-life method. We shall discuss these matters separately in the order named.

PRESENT VALUE

The report of the Commission shows, not only that it gave no consideration to rise in price levels in determining the amount of the rate base, but also that it made no attempt to ascertain the present fair value of the property involved. It adopted as the rate base the original cost of the property as shown by the company's books, adjusted to correct bookkeeping errors and depreciated as above indicated. It took the view that this depreciated book cost could properly be taken as the base without reference to whether it did or did not represent the present fair value of the property, saying: "With the decline in favor of 'fair value' as the only mode of public utility rate regulation, its keystone, reproduction cost, crumbles. Bona fide investment figures now become all important in the regulation of rates."

Much is to be said in favor of the prudent investment theory of determining the rate base. It is simple; it is expeditious; and it avoids the necessity of resorting to unsatisfactory estimates of the cost of reconstructing a system that no one would now reconstruct. Where there has been no great change in price levels, prudent investment cost can be taken, subject to appropriate depreciation, as representing the present fair value of the property for rate making purposes. And even where there have been changes in price levels, it can be thus taken, we think, if such basis has been established by legislative authority prior to the dedication of the property to public use or if statutory provision has been made for valuation of the property on the basis of present fair value and the use of prudent investment cost in the future, and the property

has been so valued. See Bauer & Gold, "Public Utility Valuation for Purposes of Rate Control" (1934) pp. 424 et seq. In the absence of such legislation and valuation, however, such depreciated original cost cannot be taken as the rate base where there has been a change in the level of prices and the investment in the utility has been made while the "fair value" theory was prevailing. As is well said in Bauer & Gold, supra, pp. 424 and 425:

"If the rights and obligations of future investors are exactly set forth, and if systematic provisions are made for enforcement, they would doubtless be held subject to the conditions. If they furnish capital under a policy explicitly enunciated, they can have no grounds for claiming that they are deprived of 'due process.' For all future dealing, legislatures are probably free to establish any policy that seems desirable from the public standpoint. They are probably not required to continue the indefinite basis of dealing with all future investments merely because no definite policies and standards were established in the past.

"The situation, however, is different with regard to properties constructed or installed in the past. As to these, the funds were contributed under the general law of the land, without exact limitations upon the return. Except for the undefined rule that they were entitled to fair return on fair value, they were not placed under precise and systematic control. If prices increased after the date of investment, the companies have been entitled to have the advance recognized in new valuations. This right probably cannot be abrogated on grounds of public policy unless a proper equivalent is provided. While the right itself is vague and variable, it nevertheless exists and presumably cannot be modified except through replacement by a definite substitute that is fair and reasonable."

And the same authors, in dealing with the method of establishing a fixed rate base "through outright adoption of investment as rate base, starting with existing book value of the properties on the basis of present accounting methods", point out as an objection to it that fluctuation in prices may not be ignored. At pp. 432 and 433 they say:

"Besides doubts as to reliability of present book figures, the proposal also raises the question as to how the shift in price level should now be treated in the light of fallen prices. Under the law of the land there is no doubt but that the public is entitled to have fair value determined according to present and prospective prices. If 'fair value' does not rest exclusively upon reproduction cost levels, it certainly must be determined nevertheless largely with consideration to the price changes that have taken place. Properties installed during the pre-1929 era back to about

1914, would have to be repriced on the basis of the new level. Furthermore, the public is entitled also to have considered the advances in technology which resulted in reduced unit cost of construction. These adjustments would be entirely ignored in outright adoption of book value as the starting point of a fixed rate base.

"These are matters of important consideration in planning and establishing the new policy of control. For the future, the purpose is, of course, to eliminate the factor of price fluctuations from consideration in the rate base. In the past, however, under present law, this has been the dominant element in valuation and primarily responsible for the unsatisfactory conditions of regulation. *But if a fixed rate base is to be established, the question should not be ignored as to how the price changes that have taken place should be provided for in the adoption of initial rate base.*" [Italics supplied.]

There is nothing in the Natural Gas Act which justifies the thought that Congress was providing therein for the exclusive use of the prudent investment theory of property valuation. No "fixed rate base" as advocated by Bauer & Gold is referred to, and no provision is made for initial valuation of properties with addition of subsequent investment costs as the base. On the contrary, the usual general provision for "just and reasonable" rates is made in sec. 4 (a) of the Act; and, as we shall point out hereafter, it is well settled in existing law that, to be considered "just and reasonable", rates must be such as to yield a fair return upon the fair value of the property used in rendering the service. In sec. 6 (a) provision is made for the Commission to ascertain the actual legitimate cost of the property and the depreciation therein, "and, when found necessary for rate making purposes, other facts which bear on the determination of such cost or depreciation *and the fair value of such property*" [Italics supplied.]

The pertinent sections of the Natural Gas Act, 52 Stat. 821, 15 USCA 717c (a) 717d (a), 717e (a) (b), are as follows:

"Sec. 4. (a) All rates and charges made, demanded, or received by any natural-gas company for or in connection with the transportation or sale of natural gas subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges, shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful."

"Sec. 5. (a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, municipality, State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged,

or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: Provided, however, That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates."

"SEC. 6. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

"(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction."

It was clearly the intention of Congress that under these sections the Commission might investigate and ascertain cost and depreciation of properties of natural gas companies, irrespective of whether a rate inquiry was involved or not, and that, where rate making was involved, the investigation might extend to other facts which bear on cost or depreciation and the fair value of the property. Instead of prescribing a change in the method of determining the rate base, it is clear that the statute contemplates that the base should be determined in accordance with existing legal rules; and it is basic in these rules that the present fair value of the property be ascertained so that rates may be established which will afford a fair return upon fair value and so will not be confiscatory in the constitutional sense. This we understand to be the construction given the Act in the recent case of Federal Power Commission v. Natural Gas Pipeline Co., 315 U. S. 575, 585, 586, where the Court, speaking through Mr. Chief Justice Stone, said:

"By long standing usage in the field of rate regulation, the 'lowest reasonable rate' is one which is not confiscatory in the constitutional sense. Los Angeles Gas Co. v. Railroad Commission, 289 U. S. 287, 305; Railroad Commission v. Pacific Gas Co.,

supra, 394, 395; Denver Stock Yard Co. v. United States, 304 U. S. 470, 475. Assuming that there is a zone of reasonableness within which the Commission is free to fix a rate varying in amount and higher than a confiscatory rate, see Banton v. Belt Line Ry. Corp., 268 U. S. 413, 422, 423; Columbus Gas Co. v. Commission, 292 U. S. 398, 414; Denver Stock Yard Co. v. United States, supra, 483, the Commission is also free under sec. 5 (a) to decrease any rate which is not the 'lowest reasonable rate.' *It follows that the Congressional standard prescribed by this statute coincides with that of the Constitution*, and that the courts are without authority under the statute to set aside as too low any 'reasonable rate' adopted by the Commission which is consistent with constitutional requirements.

"The Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas. Agencies to whom this legislative power has been delegated are free, within the ambit of their statutory authority, to make the pragmatic adjustments which may be called for by particular circumstances." [Italics supplied.]

The conception that, not to be confiscatory, rates must yield a fair return upon the present fair value of the property has long been well settled by Supreme Court decisions. Munn v. Illinois, 94 U. S. 113, established the principle that rates of public utilities were subject to regulation by the state. Mr. Chief Justice Waite, who wrote the opinion in that case, laid down the limitation, however, in Stone v. Farmers Loan & Trust Co., 116 U. S. 307, 331, that the power could not be exercised to confiscate the property invested in the utility, saying, "From what has thus been said, it is not to be inferred that this power of limitation or regulation is itself without limit. This power to regulate is not a power to destroy, and limitation is not the equivalent of confiscation. Under pretense of regulating fares and freights, the State cannot require a railroad corporation to carry persons or property without reward; neither can it do that which in law amounts to a taking of private property for public use without just compensation, or without due process of law." Regulation of rates of public utilities differs from ordinary price fixing such as was involved in Nebbia v. New York, 291 U. S. 502, in that, in the case of a public utility, property has been dedicated to the use of the public and the state can require its continued operation, whereas in the case of ordinary property subject to price regulation the owner is not required to sell. By dedicating his property to public use the owner impliedly consents to regulation of its rates by the state; but this consent is conditioned upon his property's not being taken from him under the guise of regulation, i. e. that the rates fixed allow him a fair return

upon its fair value. The rule is thus stated in the Minnesota Rate Cases, 230 U. S. 352, 434:

"The basis of calculation is the 'fair value of the property' used for the convenience of the public. Smyth v. Ames, supra (p. 546). Or, as it was put in San Diego Land & Town Co. v. National City, supra (p. 757), 'What the company is entitled to demand, in order that it may have just compensation, is a fair return upon the reasonable value of the property at the time it is being used for the public.'"

In Los Angeles Gas Co. v. R. R. Com'n, 289 U. S. 287, 305, cited with approval by Mr. Chief Justice Stone in Federal Power Commission v. Natural Gas Pipeline Co., supra, Mr. Chief Justice Hughes laid down the criterion in the following language:

"As the property remains in the ownership of the complainant, the question is whether the complainant has been deprived of a fair return for the service rendered to the public in the use of the property. This Court has repeatedly held that the basis of calculation is the fair value of the property, that is, that what the complainant is entitled to demand, in order that it may have 'just compensation,' is '*a fair return upon the reasonable value of the property at the time it is being used for the public.*' In determining that basis, the criteria at hand for ascertaining market value, or what is called exchange value, are not commonly available. The property is not ordinarily the subject of barter and sale and, when rates themselves are in dispute, earnings produced by rates do not afford a standard for decision. The value of the property, or rate base, must be determined under these inescapable limitations. And mindful of its distinctive function in the enforcement of constitutional rights, the Court has refused to be bound by any artificial rule or formula which changed conditions might upset. We have said that the judicial ascertainment of value for the purpose of deciding whether rates are confiscatory 'is not a matter of formulas, but there must be a reasonable judgment having its basis in a proper consideration of all relevant facts.' Minnesota Rate Cases, 230 U. S. 352, 434; Georgia Railway & Power Co. v. Railroad Commission, 262 U. S. 625, 630; Bluefield Water Works Co. v. Public Service Commission, 262 U. S. 679, 690." [Italics supplied.]

Under this rule, in the absence of some such statutory provision as indicated at the beginning of this discussion, the determination of fair present value as the rate base is inescapable if there is to be a "fair return upon fair value". What has declined in favor is not, as the Commission thought, the "doctrine" of fair value, but the cumbersome and misleading reproduction cost theory as a means of determining it. Property has no value except present

value. Past value exists only in memory or in history, future value only in estimate or expectation. It is the property presently existing which belongs to the utility and is used by the public. It is that property which is depreciated through use and which is gradually being sold through depreciation to the public. And it is the value of that property as used which must be considered in fixing rates that will reimburse the company for its partial sale through use and provide an adequate return upon investment. If a piece of property which cost $10,000 originally but can only be replaced at a cost of $20,000, and is worth $20,000 to the company in carrying on its business, be treated as being worth only $10,000 for the purpose of depreciation and return, the company is deprived of property by the rate in exactly the same way as a merchant who is required to sell for $5 a pair of $10 shoes. It must not be forgotten that it is the property owned by the utility, and not the cash invested by stockholders in its stock, that is devoted to public use; that this property is worn out in furnishing the service which the public receives and which the utility is bound to render; and that, unless the utility receives a rate sufficient to make necessary replacements at current prices with a fair return upon the present fair value of its investment, its property is being taken from it and given to its customers.

The task of arriving at fair present value is a difficult one and necessarily involves exercise of judgment of a high order. The problem is easily over-simplified by those seeking to maintain a thesis. In times of falling prices, those representing the utilities emphasize the importance of original investment cost, while those seeking lower rates point out the folly of fixing rates on the basis of a value which no longer exists and demand that reproduction cost be taken as the criterion. In periods of rising prices, the position of the advocates is reversed. To fix value on original investment cost without reference to change in price levels may easily lead to absurdly high or low valuations, with an undue burden on the public in the case of falling prices and with such confiscation of the property of the utility in the case of rising prices as may result in its ruin. It is idle to argue that the utility should not complain if it recoups through its rates the original investment in its equipment. The law requires that the business of the utility go on. Its equipment must be replaced as it is worn out. And, if the rates allowed are not sufficient to make replacements at current prices, bankruptcy is inevitable. On the other hand, estimates of reproduction cost do not provide a satisfactory method of arriving at value. Aside from the temptation of expert witnesses to overestimate costs in a theoretical reproduction, the fact is that nobody could or would build the utility again as it has

grown up through the years. While reproduction cost may be considered, therefore, it is not ordinarily, standing alone, a fair criterion of valuation.

The duty of the Commission to determine the present fair value of the property and to give consideration to all factors entering into that value is thus stated by Mr. Chief Justice Hughes in the case of Los Angeles Gas Co. v. R. R. Com'n, supra, 289 U. S. at 306:

"The actual cost of the property—the investment the owners have made—is a relevant fact. Smith v. Ames, 169 U. S. 466, 547. But while cost must be considered, the Court has held that it is not an exclusive or final test. The public have not underwritten the investment. The property, on any admissible standard of present value, may be worth more or less than it actually cost. The time and circumstances of the outlay, and the effect of altered conditions demand consideration. Even when cost is revised so as to reflect what may be deemed to have been invested prudently and in good faith, the investment may embrace property no longer used and useful for the public. This is strikingly illustrated in the present case, where the Company has a large gas manufacturing plant which, in view of the supply of natural gas, has not been used for several years and is not likely to be used for many years to come, if at all. But no one would question that the reasonable cost of an efficient public utility system 'is good evidence of its value at the time of construction.' We have said that 'such actual cost will continue fairly well to measure the amount to be attributed to the physical elements of the property so long as there is no change in the level of applicable prices.' McCardle v. Indianapolis Water Co., 272 U. S. 400, 411. And when such a change in the price level has occurred, actual experience in the construction and development of the property, especially experience in a recent period, may be an important check upon extravagant estimates.

"This Court has further declared that, in order to determine present value, the cost of reproducing the property is a relevant fact which should have appropriate consideration. Southwestern Bell Telephone Co. v. Public Service Commission, 262 U. S. 276, 287, 288; Bluefield Water Works v. Public Service Commission, supra; Standard Oil Co. v. Southern Pacific Co. 268 U. S. 146, 156; McCardle v. Indianapolis Water Co., supra, p. 410. In Southwestern Bell Telephone Company v. Public Service Commission, supra, this Court said that 'it is impossible to ascertain what will amount to a fair return upon properties devoted to public service without giving consideration to the cost of labor, supplies, etc., at the time the investigation is made. An honest and intelligent forecast of probable future values, made upon a view of all the relevant circumstances, is essential. If the highly important element of

present costs is wholly disregarded such a forecast becomes impossible.' See St. Louis & O'Fallon Railway Co. v. United States, 279 U. S. 461, 485. But again, the Court has not decided that the cost of reproduction furnishes an exclusive test. See Smyth v. Ames, supra; Minnesota Rate Cases, supra; Georgia Railway & Power Co. v. Railroad Commission, supra. We have emphasized the danger in resting conclusions upon estimates of a conjectural character. We said, in Minnesota Rate cases, supra, p. 452,—'The cost-of-reproduction method is of service in ascertaining the present value of the plant, when it is reasonably applied and when the cost of reproducing the property may be ascertained with a proper degree of certainty. But it does not justify the acceptance of results which depend upon mere conjecture. It is fundamental that the judicial power to declare legislative action invalid upon constitutional grounds is to be exercised only in clear cases. The constitutional invalidity must be manifest and if it rests upon disputed questions of fact, the invalidating facts must be proved. And this is true of asserted value as of other facts.' The weight to be given to actual cost, to historical cost, and to cost of reproduction new, is to be determined in the light of the facts of the particular case. McCardle v. Indianapolis Water Co., supra."

In the pending case, original investment cost cannot be taken alone as a measure of the present fair value of the property because of the great changes in the prices of labor and materials which have occurred over the more than forty years during which the investments in the property have been made. These changes are matters of general and common knowledge and are shown by many publications, statistical reports and other documents readily available. That such changes have occurred is shown also by the evidence offered before the Commission. It is true that the statements of reproduction cost and trended original cost fail to allow for the increased productivity of labor and fail to take account of other pertinent factors; and the Commission, we think, was justified in refusing to accept the conclusions therein contained. But this does not mean that the Commission could ignore the change in price levels which was clearly established and was matter of general and common knowledge otherwise. The Commission's staff prepared statements showing that the conclusions of Hope's reproduction cost and trended cost statements should not be accepted. They could doubtless have furnished estimates as to the proper effect to be accorded price trends in the correct valuation of the property. At all events, the Commission should have given consideration to the matter; and, if of opinion that investment cost was a true measure of the present value of the property notwithstanding increase in prices, it should have found this as a fact.

It could not absolutely ignore the fact of increased price levels in determination of present fair value. This is clearly laid down by Mr. Chief Justice Hughes in Los Angeles Gas Co. v. R. R. Com'n, supra, and is firmly established by repeated decisions of the Supreme Court.

In the recent case of McCart v. Indianapolis Water Co., 302 U. S. 419, the Supreme Court affirmed a holding of the Circuit Court of Appeals that a decision of a district court should be reversed and the case remanded for a redetermination of value because of an upward trend in prices of which the Circuit Court of Appeals took judicial notice and which the District Court had not taken into account.

In West v. C. & P. Tel. Co., 295 U. S. 662, the Supreme Court, in condemning the use of certain price trend indices in connection with cost as establishing present value, said:

"The established principle is that as the due process clauses (Amendments V and XIV) safeguard private property against a taking for public use without just compensation, neither Nation nor State may require the use of privately owned property without just compensation. When the property itself is taken by the exertion of the power of eminent domain, just compensation is its value at the time of the taking. So, where by legislation prescribing rates or charges the use of the property is taken, just compensation assured by these constitutional provisions is a reasonable rate of return upon that value. To an extent value must be a matter of sound judgment, involving fact data. To substitute for such factors as historical cost and cost of production, a 'translator' of dollar value obtained by the use of price trend indices, serves only to confuse the problem and to increase its difficulty, and may well lead to results anything but accurate and fair. This is not to suggest that price trends are to be disregarded; quite the contrary is true. *And evidence of such trends is to be considered with all other relevant factors.* St. Louis & O'Fallon Ry. Co. v. United States, 279 U. S. 461, 485; Clark's Ferry Bridge Co. v. Public Service Comm'n, 291 U. S. 227, 236." [Italics supplied.]

In that case, the District Court, departing from the method employed by the Maryland Commission, adopted as the rate base cost less depreciation reserve. This method the court likewise condemned, saying:

"The opinion in essence consists of the conclusion, that, all the circumstances considered, it will be fair to appraise the property at cost less depreciation reserve. This rough and ready approximation of value is as arbitary as that of the Commission, for it is unsupported by findings based upon evidence."

In McCardle v. Indianapolis Water Co., 272 U. S. 400, 411, the Court, in condemning a valuation which did not take account of a change in the level of prices, said:

"Undoubtedly, the reasonable cost of a system of waterworks, well-planned and efficient for the public service, is good evidence of its value at the time of construction. And such actual cost will continue fairly well to measure the amount to be attributed to the physical elements of the property so long as there is no change in the level of applicable prices. And, as indicated by the report of the commission, it is true that, if the tendency or trend of prices is not definitely upward or downward and it does not appear probable that there will be a substantial change of prices, then the present value of lands plus the present cost of constructing the plant, less depreciation, if any, is a fair measure of the value of the physical elements of the property. The validity of the rates in question depends on property value January 1, 1924, and for a reasonable time following. While the values of such properties do not vary with frequent minor fluctuations in the prices of material and labor required to produce them, they are affected by and generally follow the relatively permanent levels and trends of such prices."

In Southwestern Bell Tel. Co. v. Public Service Commission, 262 U. S. 276, 287, the Court said:

"Obviously, the Commission undertook to value the property without according any weight to the greatly enhanced costs of material, labor, supplies, etc., over those prevailing in 1913, 1914 and 1916. As matter of common knowledge, these increases were large. Competent witnesses estimated them as 45 to 50 per centum.

* * * * * * *

"It is impossible to ascertain what will amount to a fair return upon properties devoted to public service without giving consideration to the cost of labor, supplies, etc., at the time the investigation is made. An honest and intelligent forecast of probable future values made upon a view of all the relevant circumstances, is essential. If the highly important element of present costs is wholly disregarded such a forecast becomes impossible. Estimates for tomorrow cannot ignore prices of today."

In Bluefield Water Works & Imp. Co. v. Public Service Com., 262 U. S. 679, 689, the Court said:

"The record clearly shows that the commission in arriving at its final figure did not accord proper, if any, weight to the greatly enhanced costs of construction in 1920 over those prevailing about 1915 and before the war, as established by uncontradicted

evidence; and the company's detailed estimated cost of reproduction new, less depreciation, at 1920 prices, appears to have been wholly disregarded. This was erroneous."

See also Driscoll v. Edison Lt. & Power Co., 307 U. S. 104, 118–119.

The case of R. R. Commission v. Pacific Gas & Electric Company, 302 U. S. 388 is not to the contrary; for it appears in that case that the Commission there received and considered evidence of cost of reproduction and other evidence bearing upon the value of the property. Here no consideration whatever was given to change in price levels and its effect on value, and investment cost less depreciation is frankly taken as the rate base without any pretense that it represents value. As stated above, we find no fault in the action of the Commission in rejecting the estimates of reproduction cost and trended value; and we have considered whether we might not sustain the rate base on the theory that, upon the rejection of these estimates, the only evidence of value before the Commission was the evidence of investment cost. This, however, would be to close our eyes to the rise in price levels which are so great and far reaching that we must take judicial notice of them, and which are shown by the evidence to that effect included in the estimates. It would be to close our eyes also to the fact that the Commission has proceeded upon an erroneous theory of law in arriving at the rate base.

And there is nothing to the contrary in Federal Power Commission v. Natural Gas Pipeline Co., supra. It is true that in that case the court said that the Constitution "does not bind rate making bodies to the service of any single formula or combination of formulas"; but substantially the same thing had been said long before in the Minnesota Rate cases. See 230 U. S. at 434. It had been repeated by Mr. Chief Justice Hughes in the opinion in Los Angeles Gas Co. v. R. R. Com'n, supra, and appears in the opinions in a number of other cases. The concurring opinion does interpret the opinion of the court as holding that the Commission may now adopt prudent investment as a rate base and reject all other formulas. We think, however, in view of the expression in the majority opinion quoted above, to the effect that the rate must be one which is not confiscatory, that, in judging whether the rate is confiscatory or not, historical cost under the prudent investment theory can be adopted as the rate base without reference to other matters affecting value only where it can reasonably be found to represent present fair value. Rate making bodies may make pragmatic adjustments "within the ambit of their statutory authority," but the ambit of their authority does not extend to action which is confiscatory in char-

acter. Original cost or historical cost as shown by the books is evidence of value in all cases and can be adopted as representing present fair value where under all the circumstances of the case it is not unreasonable to do so. But, in the light of the cases cited above, it is unreasonable to adopt it as representing such value when, as in the case at bar, there has been a great change in price levels.

To sum up on this branch of the case: The Natural Gas Act makes no provision for a "fixed rate base" or the exclusive use of prudent investment in determining the base. Not to be confiscatory, rates must allow a fair return upon the present fair value of the property. To determine this fair return upon present fair value, the Commission must find what the present fair value of the property is. The Commission is not confined to any one formula or group of formulas in determining present fair value, but must determine it in the light of all the circumstances of the case. Prudent investment cost with proper allowance for depreciation may in some cases provide, without consideration of anything else, a proper measure of present fair value, but not where following investment there has been a decided change in price levels. Such a change in price levels is shown by the evidence in this case and besides is a matter of such general and common knowledge that the court must take judicial notice of it. The adoption by the Commission of investment cost less depreciation as the rate base, therefore, is arbitrary and unreasonable, does not conform to statutory requirements and is violative of the due process clause of the 5th Amendment to the Constitution.

EXCLUSION OF WELL DRILLING COSTS

Prior to 1923 Hope and the companies from which it acquired properties charged on their books to expense the labor cost directly involved in drilling new wells and the portion of overhead expense properly allocable thereto. The items so charged amounted to approximately $17,000,000, which, of course, does not take account of depreciation or depletion. Under the system of uniform accounts now prescribed by the Commission, such items are charged, as they should be, to capital investment; and such items since 1923 have been so charged by Hope because of a requirement to that effect in the West Virginia law. In valuing Hope's property, however, the Commission refused to consider in the valuation these items aggregating $17,000,000 (reduced by depletion and depreciation to around $4,000,000), because they had originally been charged on the books to expense, although they clearly represented investment in existing property.

If present fair value be taken as the criterion in determining the rate base, in accordance with our holding as to the legal and constitutional requirements in the premises, there can be no question but that the present fair value of these wells and all elements that have entered into that value must be given consideration, whatever be the method of accounting that Hope may have followed in entering the investment on its books. And, even if the prudent investment theory be adopted for determining the rate base, we see no valid reason for excluding these items from the investment. The wells are existing property used by the utility in its service to the public. The items entered into their cost just as truly as if they had been charged to capital account. No question is raised as to the investment being prudent; and the method of accounting employed with respect to the items cannot change the fact that they represent investment by the company in property which it uses in rendering the service for which rates are prescribed. "Original cost," says Mr. Justice Brandeis in a note to his celebrated dissenting opinion in Southwestern Bell Telephone Co. v. Public Service Commission, 262 U. S. 276, 295, "is the amount actually paid to establish the utility." In this note, which shows very clearly that under the prudent investment theory, historical cost, which is prudent investment, must take account of what the property would have cost on the basis of what normally should have been paid for it. He says:

"Original cost is the amount actually paid to establish the utility. The amount is ascertained, where possible, by inspection of books and vouchers, and by other direct evidence. If this class of evidence is not complete, it may be necessary to supplement it by evidence as to what was probably paid for some items, by showing prices prevailing for work and materials at the time the same were supplied. But the evidence of these prices is merely circumstantial, or corroborative, evidence of the amount actually paid. In determining actual cost, whatever the evidence, there is no attempt to determine whether the expenditure was wise or foolish, or whether it was useful or wasteful. Historical cost, on the other hand, is the amount which normally should have been paid for all the property which is usefully devoted to the public service. It is, in effect, what is termed the prudent investment. In enterprises efficiently launched and developed, historical cost and original cost would practically coincide both in items included and in amounts paid. That is, the subjects of expenditure would coincide; and the cost at prices prevailing at the time of installation would substantially coincide with the actual cost."

The question arose before the Interstate Commerce Commission in connection with the valuation of the New York, Philadelphia,

and Norfolk R. Co., 97 I. C. C. 273, 279, where the Commission said:

"The question to be determined is whether the voluntary act of the carrier in charging only a portion of the cost of road and equipment to its investment account estops it from thereafter claiming as investment the additional cost not charged out properly in the first instance. Under the mandate of the statute we are required to find the value of the property of the carrier. The investment account, when properly stated, constitutes evidence of value to which consideration must be given. In this case the investment in property being devoted to carrier purposes on valuation date is incompletely stated in that costs incurred therefor were entered as charges to income. If our present system of accounting had been in force when the entries were made the investment account would have included the amount here claimed as proper.

"In previous cases instances have been found where the investment account has been incorrectly kept, capital expenditures being recorded in operating expenses or as charges to income. In order to obtain an accurate statement of investment it has been necessary in such instances to reconstruct the accounts. Here the carrier has presented evidence of costs that have not been included in our restated investment figure, although the property was found in ownership and use on date of valuation, was inventoried and is included in our estimates of cost of reproduction new and less depreciation. The evidence is persuasive that the investment figure should be increased by the amount of $733,846.13 and our tentative report will be revised accordingly."

It is argued that the items charged to expense entered into the rates paid by the customers of the company, and that the company may not treat as capital investment the expenditures for property thus paid for by its customers. The answer, of course, is that the customers paid for gas, not for the construction of wells, and that neither the cost of the wells nor the company's ownership thereof is affected by the fact that it may have paid for them with the proceeds of rates that were unreasonably high. A very similar question was before the Supreme Court in Board of Commissioners v. New York Tel. Co., 217 U. S. 23. In that case the company had charged to annual expense an excessive amount for depreciation, which is not different in principle from charging items to expense that should be charged to capital, since in both cases charge to expense is increased and the charge to capital account decreased by the error. In denying a contention that the depreciation reserve thus accumulated, which had been invested in the business, should be used to make up a deficiency

in any year when earnings should be less than a reasonable return, the court said:

"Constitutional protection against confiscation does not depend on the source of the money used to purchase the property. It is enough that it is used to render the service. San Joaquin Co. v. Stanislaus County, 233 U. S. 454, 459; Gas Light Co. v. Cedar Rapids, 144 Ia. 426, 434, affirmed 223 U. S. 655; Consolidated Gas Co. v. New York, 157 F. 849, 858, affirmed 212 U. S. 19; Ames v. Union Pacific Railway Co., 64 F. 165, 176. The customers are entitled to demand service and the company must comply. The company is entitled to just compensation and, to have the service, the customers must pay for it. The relation between the company and its customers is not that of partners, agent and principal, or trustee and beneficiary. Cf. Fall River Gas Works v. Gas & Electric Light Com'rs, 214 Mass. 529, 538. The revenue paid by the customers for service belongs to the company. The amount, if any, remaining after paying taxes and operating expenses, including the expense of depreciation, is the company's compensation for the use of its property. If there is no return, or if the amount is less than a reasonable return, the company must bear the loss. Past losses cannot be used to enhance the value of the property or to support a claim that rates for the future are confiscatory. Galveston Electric Co. v. Galveston, 258 U. S. 388, 395; Georgia Ry. v. R. R. Comm., 262 U. S. 625, 632. And the law does not require the company to give up for the benefit of future subscribers any part of its accumulations from past operations. Profits of the past cannot be used to sustain confiscatory rates for the future. Newton v. Consolidated Gas Co., 258 U. S. 165, 175; Galveston Electric Co. v. Galveston, supra 396; Monroe Gaslight & Fuel Co. v. Michigan Public Utilities Commission, 292 F. 139, 147. City of Minneapolis v. Hand, 285 F. 818, 823; Georgia Ry. & Power Co. v. Railroad Commission, 278 F. 242, 247, affirmed 262 U. S. 625; Chicago Rys. Co. v. Illinois Commerce Commission, 277 F. 970, 980; Garden City v. Telephone Company, 236 F. 693, 696.

"Customers pay for service, not for the property used to render it. Their payments are not contributions to depreciation, or other operating expenses, or to capital of the company. By paying bills for service they do not acquire any interest, legal or equitable, in the property used for their convenience or in the funds of the company. Property paid for out of moneys received for service belongs to the company, just as does that purchased out of proceeds of its bonds and stock."

See also Smith v. Illinois Bell Tel. Co., 282 U. S. 133, 158, and Lindheimer v. Illinois Tel. Co., 292 U. S. 151.

A question arises as to whether the decision in the Board of Commissioners v. New York Telephone Company, supra, is not in conflict with what was said in Railroad Commission v. Cumberland Tel & Tel. Co., 212 U. S. 414, quoted from and relied on in the brief of the Commission. If there were such conflict, it would be our duty to follow the decision in the New York Telephone case, as it is the latest expression of the Supreme Court on the matter. But rightly understood, there is no conflict in the decisions. In the Cumberland case the court said, "We are not considering a case where there are surplus earnings after providing for a depreciation fund, and the surplus is invested in extensions and additions."

We have considered the cases of which Natural Gas Co. v. Public Service Commission, 95 W. Va. 557, 121 S. E. 716, may be taken as typical, to the effect that, when a company has had its rates fixed by a public service commission on the basis that certain items represent expense of doing business, it may not thereafter treat the same items as representing capital investment. Without questioning the soundness of these decisions, we think that they have no application here. This is the first proceeding for fixing the interstate rates of the company. A proceeding in West Virginia in the year 1921 fixed intrastate rates; but these related to the comparatively small portion of the company's business done in West Virginia and had no relation to interstate sales. It does not appear, moreover, to what extent, if any, the well drilling costs here under consideration were relied upon as expense of operating in the fixing of those rates, or that the rates charged were higher than they would have been if the costs had been charged to capital and the depreciation thereon charged to expense. It is suggested that the local rates of the East Ohio Gas Co. were based upon the interstate charges of Hope; but there were no proceedings before a utility commission for fixing those rates prior to the time that Hope ceased charging the well drilling items to expense, and it does not appear to what extent, if any, the rates of East Ohio as fixed by municipal ordinances and court proceedings were affected by Hope's expensing of these items.

It should be kept in mind that what the Commission must determine is the value of the company's property, whether the method used be the prudent investment method or some other. If the property were being condemned, no one would suggest that items which went into the cost of producing it should not be considered as a part of its cost, whatever method of accounting it had employed. If it were being sold on the basis of cost, no court would exclude such items from consideration. And there is as little ground for excluding them from consideration in a proceed-

ing like this, where value is being determined as a basis for rates which must compensate the company for the gradual sale of its property through use as well as provide a return upon its investment. Certainly if the company had charged to capital investment items which should have been charged to expense, there would be no excuse for not eliminating them in the valuation of the property; and there is as little excuse for not considering as capital investment items erroneously charged to expense. Bookkeeping which does not reflect realities must not be allowed to obscure the real nature of the inquiry.

DEPRECIATION

It is elementary that, whatever method be adopted for arriving at the valuation of the property, account must be taken of accrued depreciation. The Commission computed accrued depreciation by applying the straight-line service-life method to its properties, i. e. by finding a rate of depreciation based on the average service life of property, multiplying this by the years the property had been in use, and applying this percentage to the book cost of the property. The unit of production method was applied to "plant costs associated with gas supply".* Hope offered evidence of the present condition of the property, but this was condemned by the Commission as unreliable, and no consideration was given to present condition, other than that arrived at by applying the straight-line service-life formula as the measure of depreciation.

Hope contends that the application of the Commission's formula to book cost results in consequences which are inequitable and absurd in the light of existing facts. Thus, it points out that its well equipment having a book cost at the end of 1938 of $7,610,510 was depreciated to $3,222,807, or 42.4% of its cost, whereas the salvage value of such equipment over the past 10 year period has been 65.2%. Field line equipment having a book cost of $7,934,169 was depreciated to $4,088,602, or 51.5%, although the gross salvage value of such material has been 56.7%. Counsel for the Commission challenge the use of the term "salvage value" in connection with this property; but, without going into this controversy, it is sufficient to say that the Commission's method results in a depreciated value which is less than that which the company has accorded similar property under its system of accounting when removed from its wells or lines and held for further use. Other instances of absurd and inequitable consequences resulting from

*Hope complains also that, in the case of property acquired from other companies which had been taken over by Hope, the Commission deducted the depreciation reserve of those companies from book cost, even though it exceeded straight-line service-life depreciation accrued at the time. In the view that we take of the broader question, however, it is not necessary to go into this.

the application of the Commission's formula to book cost are called to our attention; but it is unnecessary to go into them here.

Many of the consequences complained of will be eliminated when the present value of the property is considered in the light of changed price levels and the depreciation percentage is applied to the higher valuations resulting. We think, however, that the Commission may not close its eyes to the actual present condition of the property in determining present value and compute depreciation on the basis of mere formulas, as it has done in this case. The formulas which it has used are undoubtedly important matters for it to take into consideration; but its duty, under the law, is to determine the present fair value of the property, and this cannot be done without consideration being given to its actual physical condition. The point was directly involved in McCardle v. Indianapolis Water Co. 272 U. S. 411, 416. In that case deduction for depreciation based on the sort of formulas used here without consideration of the actual condition of the property was disapproved by the Supreme Court, the Court saying:

"There is deducted approximately 25 per cent of estimate cost new to cover accrued depreciation. The deduction was not based on an inspection of the property. It was the result of a 'straight line' calculation based on age and the estimated or assumed useful life of perishable elements. The commission's report indicates that the property is well-planned, well-maintained and efficient. Its chief engineer inspected it, and estimated its condition by giving effect to results of the examination and to the age of the property. He deducted about six per cent to cover depreciation. Mr. Hagenah made an estimate of existing depreciation based on actual inspection and a consideration of the probable future life as indicated by the conditions found. He deducted less than six per cent. Mr. Elmes testified that he made an inspection and estimate of all the actual depreciation. He estimated $443,044 would be required to restore the property as of appraisal date to its condition when first installed and put in practical operation. He deducted that amount. The testimony of competent valuation engineers who examined the property and made estimates in respect of its condition is to be preferred to mere calculations based on averages and assumed probabilities. The deduction made in the city's estimate cannot be approved."

This was but a restatement of the doctrine laid down in Pacific Gas & Electric Co. v. San Francisco 265 U. S. 403, 406, where the court said:

"Appellant objects to the application of this method and insists that depreciation should have been ascertained upon full consideration of the definite testimony given by competent ex-

perts who examined the structural units, spoke concerning observed conditions and made estimates therefrom. As these examinations were made subsequent to the alleged depreciation for the definite purpose of ascertaining existing facts, we think the criticism is not without merit. Facts shown by reliable evidence were preferable to averages based upon assumed probabilities. When a plant has been conducted with unusual skill the owner may justly claim the consequent benefits. The problem was to ascertain the probable result of the specified rate if applied under well-known past conditions, not to forecast the probable outcome of a proposed rate under unknown future conditions."

See also B. & O. R. Co. v. United States 298 U. S. 349, 378, where it is said "* * * that opinion of experts unsupported by adequate actual tests may not safely be substituted for concrete data."

In dealing with this subject, Bauer & Gold, after analyzing the broad concept of depreciation contained in the case of Knoxville v. Knoxville Water Co., 212 U. S. 1, go on to say (Public Utility Valuation for Purposes of Rate Control pp. 218–219):

"The Court doubtless intended to deal comprehensively with depreciation in the Knoxville case. It declared that due current provisions may be made as an operating cost and that all actual depreciation due to expired service life shall be deducted in the determination of fair value. The amount of deduction, however, was left as a matter of proof to be determined through evidence. Its determination, just as the establishment of reproduction cost new, depends upon affirmative proof. The same applies to every phase of valuation. No item can be included or deducted without valid basis of fact. Determination of reproduction cost new, or the primary valuation however determined, is one process; deduction for depreciation is a second. Each must be based upon facts. Neither can be taken out of the air nor based upon hypothetical or theoretical calculations and analyses."

And as bearing upon the necessity of inspection and the weight to be accorded evidence based thereon, it is said at page 220 of this comprehensive and well-considered work:

"Emphasis has been laid upon inspection as against calculation by formula in relation to expired life. The decisions, however, have not rejected the conception that depreciation consists of expired life. They have merely relied upon results of inspection as against abstract calculations of expired life that have not been checked against the realities as determined through physical inspection. While life tables may be important as general guidance, in a particular property or unit the economic life may be much greater or much less than the average presented in a life table. As a calculation based on life tables, expired life

of a unit may be 50%, but in reality it may be only 10% because of special conditions relating to the particular item. Conversely, however, theoretical calculation may show expired life of only 10%, while actual depreciation may be 50%.

"The differences in operating and maintenance conditions are so great between utility properties that inspection is necessary to determine reasonably the ratio of expired to total economic life of the different units. The object of examination is determination of this ratio. This may involve estimates as to remaining and relative expired life. But it would be judgment based upon actual inspection rather than upon mere theoretical calculations without regard to the actualities of the property."

Included in accrued depreciation by the Commission were items of $2,107,261 based upon the cost of future abandonment of gas wells and $722,757 upon the cost of future abandonment of other property. Contention is made that, in addition to the error of disregarding the present physical condition of the property in computing depreciation, there was error in adding to depreciation this accrued portion of the cost of future abandonment of property. We cannot agree with this contention. Prior to 1939, the cost of abandonment it is true had been charged to expense as it occurred. Under the Commission's system of accounting, however; the company was required to set up a depreciation reserve to provide for future abandonment; and in computing depreciation here, the portion of the depreciation reserve already accrued was added. The principle applied was manifestly correct. The future cost of abandonment constituted a charge against the property, which would have to be met whatever system of accounting was followed; and as the property was used, account should have been taken of this item as well as of investment already made. The cost of abandonment is not a matter which concerns only the last year of use and can therefore be considred an expense of that year. It is a matter which affects the entire cost of the property and must be taken into consideration throughout its entire useful life.

If a well, for example, had cost $10,000 and abandonment cost will amount to $1,000, the $1,000 as well as the $10,000 must be taken into account in fixing rates and depreciation as the well is used; and, assuming a life of 20 years, it is clear that at the end of 10 years the value consumed through use is not merely $5,000, or half the original investment, but $5,500, or half the total cost including the cost of abandonment. A purchaser at the end of ten years would not be justified in paying more than $4,500 for the well, because the abandonment cost of $1,000 would fall on him, and the use of the well for the remaining ten year period would only be worth a total of $5,500 from which the abandonment cost

would have to be paid. (In the illustration, no account is taken, as it should be, of the fact that the abandonment cost is to be incurred in the future and that the present worth of the sums required for abandonment, and not the principal sum, is the amount properly to be considered.) In arriving at the present value of the property, therefore, deduction must be made for the accrued portion of future abandonment cost allocable to the property as well as for depreciation in the investment already made in it, otherwise an inflated valuation will result. In computing the accrued portion, allowance must be made, having in mind the interest bearing quality of money, for the fact that the expenditure is to be made in the future. This is a matter of accounting which it is not necessary to elaborate here. The point is that, in arriving at the present value of the property, it is proper to include in depreciation the accrued portion of future abandonment cost properly computed.

OTHER MATTERS AFFECTING THE RATE BASE

Capital additions since 1940. The Commission accepted Hope's estimate of fixed capital expenditures for the years 1941, 1942, and 1943, amounting to $8,956,500. It deducted expenditures in expectation of new or increased business amounting to $1,270,000 and gross property retirements of $2,700,000, making an estimated net change in plant of $4,986,500. From this it deducted estimated net change in depletion and depreciation reserve after elimination of retirement losses chargeable against reserve, and found an estimated increase in net actual legitimate cost over the three year period of $2,784,042. This was divided by two, as the rate order became effective at approximately the middle point of the three year period, or July 15, 1942. The capital addition thus arrived at was $1,392,021. We find no error in this method. Hope complains of the refusal of the Commission to allow the estimated expenditure of $1,270,000 in expectation of new or increased business; but this was purely a matter of estimate, and we cannot say that the action of the Commission with respect thereto was erroneous or arbitrary.

Working capital. The Commission allowed $2,125,000 for working capital. Of this amount $1,228,599 was for material and supplies and is not subject to dispute. $896,401 was for cash working capital. This was arrived at by using 45 days as the lag in the receipt of revenues, and on this basis dividing by eight (as 45 days is the eighth part of a year) annual operating expenses, exclusive of gas purchases, taxes, and depreciation expenses. Since the gas which Hope purchases is paid for by its customers before it pays the producers for that gas, and since taxes are paid

long after the revenues to which they relate have been collected, we cannot say that there was anything erroneous or arbitrary in eliminating all allowance for gas purchases and taxes from this calculation. Had this been done in Hope's estimate, the result would have been $277,820 less than the amount allowed by the Commission. There is manifestly no error in this connection, therefore, of which Hope can reasonably complain.

OPERATING EXPENSES

Annual depreciation allowance. Hope complains because the Commission, in computing annual depreciation as an operating expense, has applied the rate arrived at by the straight-line service-life method above described to the original book cost of the property and, in addition, has excluded from consideration the items of approximately $17,000,000 representing well-drilling costs heretofore charged to expense. It is clear, we think, that annual depreciation must be computed on the basis of the present fair value of the property. The question was before the Supreme Court in United Railways and Electric Co. v. West 280 U. S. 234, 253-254, where the court said:

"The allowance for annual depreciation made by the commission was based upon cost. The court of appeals held that this was erroneous and that it should have been based upon present value. *The Court's view of the matter was plainly right.* One of the items of expense to be ascertained and deducted is the amount necessary to restore property worn out or impaired, so as continuously to maintain it as nearly as practicable at the same level of efficiency for the public service. The amount set aside periodically for this purpose is the so-called depreciation allowance. *Manifestly, this allowance cannot be limited by the original cost, because, if values have advanced, the allowance is not sufficient to maintain the level of efficiency.* The utility 'is entitled to see that from earnings the value of the property invested is kept unimpaired, so that at the end of any given term of years the original investment remains as it was at the beginning.' Knoxville v. Knoxville Water Co., 212 U. S. 1, 13–14. This naturally calls for expenditures equal to the cost of the worn out equipment at the time of replacement; and this, for all practical purposes, means present value. *It is the settled rule of this Court that the rate base is present value, and it would be wholly illogical to adopt a different rule for depreciation.* As the Supreme Court of Michigan, in Utilities Commission v. Telephone Co. 228 Mich. 658, 666, has aptly said: 'If the rate base is present fair value, then the depreciation base as to depreciable property is the same thing. There is no principle to sustain

a holding that a utility may earn on the present fair value of its property devoted to public service, but that it must accept and the public must pay depreciation on book cost or investment cost regardless of present fair value. We repeat, the purpose of permitting a depreciation charge is to compensate the utility for property consumed in service, and the duty of the commission, guided by experience in rate making, is to spread this charge fairly over the years of the life of the property.'" [Italics supplied.]

While Mr. Justice Butler in a note to his concurring opinion in Lindheimer v. Illinois Telephone Co. 292 U. S. 151, 176, stated that the method of computing depreciation there was not in harmony with the principle of the decision in United Railways v. West, there is nothing to indicate that the court intended to overrule that decision. The question in the Lindheimer case was whether charges to depreciation were not excessive in view of expenditures for current maintenance and the proved condition of the property. The affirmative answer given to that question by the court lends no support to the position that, in computing depreciation, the present value of the property may be ignored and depreciation be computed by applying to original cost the straight-line formula. In so far as the decision may be said to have any bearing at all upon that question, it supports the contrary position.

In Federal Power Commission v. Natural Gas Pipeline Co. 315 U. S. 575, 592, the Supreme Court dealt with an amortization allowance for a "wasting-asset business of limited life." The court said:

"We need not now consider whether, as the Government urges, there can in no circumstances be a constitutional requirement that the amortization base be the reproduction value rather than the actual cost of the property devoted to a regulated business. Cf. United Railways Co. v. West, 280 U. S. 234, 265. It is enough that here the business, by hypothesis, will end in 1954, and that the amortization base, computed at cost and including property already retired, will be completely restored by 1954 by the annual amortization allowances."

Here we are dealing not with a "wasting asset business of limited life," but with an ordinary public utility which is required by law to continue its service to the public. One of the principal reasons for determining the present fair value of its property is that rates may be fixed which will take account of depreciation based on that value in such way as to permit replacements at current prices so as to maintain the level of efficiency. This purpose will be defeated, if depreciation is allowed on the basis of cost, where cost is less than present fair value. It will be defeated too, if a portion of the property used is excluded from the depreciated

base. The use of the straight-line service-life method of depreciation, like the prudent investment theory of valuation, has the merit of simplicity and ease of application. It can unquestionably be taken into consideration in arriving at depreciation. The Supreme Court has not yet said, however, that it may be used exclusively in cases where, because of change in price levels, cost does not represent fair present value; and the decision in United Railways v. West, supra, which has never been overruled, is squarely to the contrary.

In the present state of the law, it would seem clear that, if the present fair value of the property is found to be either greater or less than the original cost of the property less straight-line service-life depreciation, a proper allowance for the difference should be made in computing annual depreciation chargeable as expense. As pointed out by Mr. Justice Stone in his dissenting opinion in United Railways v. West, supra, however, the question is not a question of law but one of fact for determination by the Commission on all the evidence before it; and, as said in the work on Depreciation by the Staff of the Public Service Commission of Wisconsin (1933) p. 136: "While, as a practical measure, we are convinced that original cost is the proper basis for computing depreciation charges, nevertheless we believe that until the doctrine of the court regarding fair value is changed to prudent investment, it is at least not practical nor plausibly consistent in theory to compute depreciation on any base other than fair value."

And we do not think it proper to ignore, as the Commission did, the element of expense attributable to the depreciation of capital added to rate base after 1940. New property used by the company is subject to depreciation as well as old property; and we see no reason why annual depreciation with respect to the additions made to capital between 1940 and the effective date of the rate order should not have been considered as an element of expense.

Return from gasoline and butane operations of affiliate. Hope Construction and Refining Company, another Standard Oil subsidiary, extracts gasoline and other byproducts from the natural gas produced by Hope. This is in reality a part of Hope's natural gas business, although carried on by an affiliate. The Commission credited to Hope the portion of the profits realized by the affiliate after allowing cost of processing and 6½% return upon net investment. Although this results in crediting to the utility a greater portion of the net profits of the operation of the subsidiary than is ordinarily credited in such cases, we cannot say that the action of the Commission is so arbitrary and unreasonable as to be invalid; and it is well settled that, in the absence of arbitrary action resulting in a confiscatory rate, we may not substitute our judgment of what is right and proper for that of the Commission.

Federal income tax. It is elementary that taxes, including income taxes paid the federal government, are proper elements of expense of operation. The Commission found that $76,579 was a proper amount to allow for federal income tax for the future, although the evidence was that Hope paid $912,313 in federal income tax in 1940. Hope contends that the Commission, in adjudging its 1940 rates to be unreasonable, computed its income tax liability at a figure no greater than that estimated for the future, notwithstanding it had actually paid $912,313 on account of federal income tax in that year. As we have reached the conclusion, as stated more fully hereafter, that the Commission was without power to make findings as to the reasonableness of past rates, except as incidental to fixing rates for the future, we need not determine what allowance should be made for income tax in 1940. So far as rates for the future are concerned, changes in tax laws render irrelevant a discussion of the Commission's figures. In further proceedings to establish rates for Hope, due consideration will doubtless be given to federal income tax liability in estimating necessary expenses of operation, based upon what income tax Hope will be required to pay on income derived from rates found to be reasonable.

Selection of 1940 as test year. The Commission selected 1940 without regard to the experience of the years immediately prior thereto, as the test year for determining expense of operation in fixing future rates. It is ordinarily unsafe thus to adopt the experience of a single year as a guide. United Gas Public Service Co. v. Texas, 303 U. S. 123, 145; West Ohio Gas Co. v. Public Utilities Com'n, 294 U. S. 79, 81. We do not think that under the peculiar circumstances of the case, however, this action of the Commission can be condemned as arbitrary or unreasonable. The increased demand for gas resulting from war conditions, made the experience of 1940 a safer guide for the future than that of prior years. Hope makes much of the fact that the winter of that year was more than ordinarily severe and that the increased demand for gas resulted in a large percentage of sales representing gas from its own wells, which did not involve payment of the charge required by its contracts on gas purchased from others. The increased demand due to war conditions, however, must necessarily have the same effect, so far as this matter is concerned. The experience of 1940 was the only experience properly comparable. In further proceedings, the experience following 1940 can be added to the experience of that year to form a longer and more dependable test period.

Other matters affecting operating expenses. Hope's contention as to depreciation and return on distribution properties is sufficiently covered by what we have heretofore said about the neces-

sity of ascertaining present fair value. The contention that $165,963 for drilling a dry well should have been charged to expense in 1940 seems well taken; but the matter can have little bearing in future hearings, as the test period will doubtless cover 1941 as well as 1940 and it will be immaterial which year carries the charge. The amortization of rate case expense over a ten year period seems to be reasonable. It is to be hoped that rate controversies will not be matters of annual occurrence. Driscoll v. Edison Light & Power Co., 307 U. S. 104, 121.

RATE OF RETURN

The Commission fixed the rate of return at 6½%. There is no controversy as to the rule applicable in determining the rate. "What annual rate will constitute just compensation depends upon many circumstances and must be determined by the exercise of a fair and enlightened judgment, having regard to all relevant facts. A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties." Bluefield Water Works & Improvement Co. v. Public Service Comm'n, 262 U. S. 672, 692.

Under this test we think that the rate of return of 6½% is reasonable. Hope is a well established natural gas company with markets in the industrial regions of Ohio and Pennsylvania protected through its affiliates East Ohio Gas Co. and Peoples Natural Gas Co. As a subsidiary of Standard Oil it has financial advantages that independent utilities do not possess. Cf. Wabash Valley Electric Co. v. Young, 287 U. S. 488, 501. The record shows that profits earned by industrial corporations on invested capital declined from 11.3% in 1929 to 7.5% by 1940. Profits of railroads declined to 3.3% and of utilities to 5.4%. Interest rates are at a low level and rates of return demanded by investors are among the lowest that have ever existed. Securities of natural gas companies were sold at rates between 3% and 6%, with yields on the bulk of bond issues being between 3% and 4½%. Under such circumstances, a finding that 6½% is a reasonable rate of return cannot

be disturbed. A like rate of return was approved by the Supreme Court for natural gas companies in Dayton Power & Light Co. v. Com'n, 292 U. S. 290, 311, and Federal Power Com'n v. Natural Gas Pipeline Co., 315 U. S. 575, 569.

PAST RATES

The Commission, while fixing rates to become effective July 1, 1942, found that the rates charged by Hope from June 30, 1939 to that date were unreasonable and unlawful and that the charges to the East Ohio Gas Company were "unjust, unreasonable, excessive and therefore unlawful to the extent of $830,892 during 1939, $3,215,551 during 1940, and $2,815,789 on an annual basis since 1940." It states that it made this finding because the City of Cleveland had raised the question of the lawfulness of the rate charged the East Ohio Gas Company by Hope and had requested that the Commission find the just and reasonable and lawful rate from June 30, 1939, to the date of the Commission's determination "as an aid to state regulation." With respect to its power to take such action, the Commission said:

"The Commission does not have the authority to fix rates for the past and to award reparations. But Congress did empower and instruct the Commission in section 5 (a) of the Natural Gas Act to fix future rates, and as a step in that process we must necessarily consider the reasonableness of past and existing rates. When the issue is raised and the public interest will be served, we consider as a necessary part of that duty the power to examine the entire rate problem involved and to determine what rates were lawful in the past. Also, section 14 (a) of the Act authorizes the Commission to investigate any facts which it finds necessary in order to determine whether Hope has violated any provision of the Natural Gas Act. Furthermore, the Commission has power to perform any act, pursuant to section 16, which is necessary or appropriate to carry out the provisions of the Act. Under section 4 (a) of the Act any interstate wholesale rate that is not just and reasonable is unlawful. Federal Power Commission v. Natural Gas Pipeline Co., 315 U. S. 575. Hope's rate collected from East Ohio Gas Company was lawful after June 21, 1938, the effective date of the Act, only to the extent that it was just and reasonable. The City of Cleveland states that the Ohio Commission is investigating the reasonableness of the East Ohio Gas Company's bonded retail rates in Cleveland for the period since June 30, 1939, and that the lawfulness of Hope's rate is an important factor in the case. Since the enactment of the 1938 Natural Gas Act this Commission has had exclusive jurisdiction to determine the lawfulness

of the interstate wholesale rates charged by Hope and other natural gas companies.

"In response to the request of the City of Cleveland, the Commission will make the appropriate findings of fact as to the lawfulness of the rates charged East Ohio by Hope since June 30, 1939. The Interstate Commerce Commission has furnished precedents for the performance of this public duty. Congress intended that this Commission cooperate with State Commissions and municipalities, and the provisions of sections 5 (b) and 17 are special evidence of such intent."

The fundamental difference between quasi-legislative and quasi-judicial power is that the one is concerned primarily with prescribing regulations for the future, the other with determining rights in the light of what has occurred in the past. Cf. Baer Bros. v. Denver & R. G. R. Co. 233 U. S. 479, 486. The Natural Gas Act shows clearly that it was the intention of Congress to give the Commission quasi-legislative power, i. e. regulatory power as to future rates; but there is no indication of any intention to clothe it with judicial or quasi-judicial powers with respect to past charges or practices, such as was vested in the Interstate Commerce Commission by section 9 of the Interstate Commerce Act. 49 USCA 9. As the Commission itself says, it was not given authority to fix rates for the past or to award reparations on account of past rates. If it was not given the power to fix past rates, or award reparations based upon their unreasonableness, it certainly was given no power to do the same thing indirectly by making findings of fact as to past rates to be given effect in rate proceedings before state commission. No intention on the part of Congress to vest any such unusual power in a commission ought to be indulged unless conferred in the plainest terms; and not only is it not plainly given here, but such power cannot be spelled out of the statutes on any theory of interpretation with which we are familiar.

Section 4 (a) of the Natural Gas Act, to which the Commission refers in its opinion, merely provides that rates shall be "just and reasonable" and declares unlawful a rate that is not "just and reasonable". Section 14 (a) provides for nothing except investigations by the Commission to determine whether or not the act is being violated. The only power with respect to fixing rates is that contained in section 5 (a) heretofore quoted, which is confined to prescribing rates for the future. Section 16, to which the Commission refers, merely clothes the Commission with power to perform all acts etc. necessary or appropriate to carry out the provisions of the Act. Certainly no power to make findings as to past rates is contained there. Section 5 (b) authorizes the Commission, upon its own motion or upon request of a state com-

mission, to investigate and determine the cost of production or transportation of natural gas, not to fix past rates or to do the same thing indirectly by determining that amounts collected in the past exceeded reasonable rates. Section 17 does no more than authorize the Commission to refer any matter arising in the administration of the act to a board, members of which are to be nominated by state commissions, and to authorize the Commission to confer with state commissions and hold joint hearings with them in connection with any matter "with respect to which the Commission is authorized to act", and to authorize the Commission, in the administration of the act, to avail itself of the cooperation, services etc. of state commissions.

In none of these sections is any power granted to make findings as to reasonableness of past rates "as an aid to state regulation"; and in all of them taken together and construed in the light most favorable to the existence of the power, there is no indication of any intention on the part of Congress to grant such power. We cannot escape the conclusion that, if it had been the intent of Congress to grant unusual power of this sort, it would have said so plainly. Instead of saying so, however, Congress clearly limited the power of the Commission to that of fixing rates for the future by the following provision of section 5 (a): "The Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract *to be thereafter observed and in force*, and shall fix the same by order". [Italics supplied.] It is to be noted that in the passage of the Public Utility Act of 1935, upon which the Natural Gas Act is modeled, provisions giving the Commission power to investigate single rates and issue reparation orders, originally incorporated in the bill, were stricken out, the Senate Committee saying in its report: "They are appropriate sections for a state utility law, but the committee does not consider them applicable to one governing merely wholesale transactions". The Commission may not by administrative interpretation of the act thus clothe itself with a power denied it by Congress. As was said by Mr. Chief Justice Groner in Chenery Corp. v. Securities and Exchange Com'n D. C. App. 128 F. 2d 303, 311:

"In expressing this opinion, we are not saying that the Commission's view is not directed to a desirable end. As to that, opinions of men of experience and probity and judgment will differ widely. But, if the Commission's objective is to be attained, it should be only after the pros and cons have been carefully weighed in their relation, respectively, to the dangers and the benefits, and the scales should be controlled by Congress and not by the Commission. In short, all that we hold is that this vital question of policy is one for the Congress and not for the Commission."

When rates were filed with the Commission pursuant to section 4 (c) of the Act they became the only lawful rates which the utility could charge or accept. Cf. L. & N. R. Co. v. Maxwell 237 U. S. 94. Until changed by the Commission under the power granted pursuant to section 5 (a) they were binding alike upon the company and its customers; and, in the absence of a provision for award of reparation, there could be no occasion for a determination of their reasonableness except as reason for changing them in an order prescribing rates for the future. The suggestion in the Commission's brief that exercise of power as to past rates is necessary to obviate injustices resulting from delay in rate proceedings lacks force in view of the provision of the statute for the entry of interim orders. Sec. 16. Cf. Federal Power Com'n v. Natural Gas Pipeline Co. 315 U. S. 575, 583.

As a step in the process of fixing rates for the future, it was of course proper for the Commission to make findings with respect to the conditions and rates of the past, and we shall construe the findings as made pursuant to that power, and as subject to review like other findings made in support of the order. When so considered, they are invalidated by the same errors that vitiate the findings upon which the order fixing rates for the future is directly based.

It is argued that we are without power to review the findings as to past rates because no order is based thereon; but, as stated above, they are reviewable because made as a step in the proceeding to fix rates for the future. If, however, they be considered separate and apart from this and it be thought, contrary to our view, that the Commission has power to make such findings as to past rates "as an aid to state regulations", we think, nevertheless, that there can be no question as to their being reviewable under the statute. Such determination in that case would be, in effect, an order of the Commission affecting substantial rights and contractual relationships of a party to a proceeding before it and would be reviewable as such, whatever it might be called. Columbia Broadcasting System v. United States 316 U. S. 407; Rochester Telephone Corp. v. United States 307 U. S. 125. As said by Mr. Chief Justice Stone in the Columbia Broadcasting case, supra, with respect to whether particular action by the Commission constituted a reviewable order: "The particular label placed upon it by the Commission is not necessarily conclusive, for it is the substance of what the Commission has purported to do and has done which is decisive. Powell v. United States 300 U. S. 276, 284–85; A. F. of L. v. Labor Board 308 U. S. 401, 408." And as said by Mr. Justice Frankfurter in his concurring opinion in that case: "If an administrative determination of status has the effect of subjecting a person to legal obligations, whether embodied in statute or previously formulated administrative commands, or otherwise affecting legal

rights, such a determination possesses the elements of a reviewable order." A finding by the Commission which determines that past rates are unlawful in a determined amount, and which is to be given effect by a state regulatory body in determining the reasonableness of rates charged on the basis thereof, certainly affects legal rights; and the power of review under the statute should be coextensive with the power of the Commission to make such determination.

In any view of the matter, therefore, the findings as to past rates are reviewable, and should be set aside for the reasons heretofore given in discussing valuation and depreciation. We are impressed, also, with the thought that the finding as to unreasonableness of these rates cannot be sustained because made on the basis of the utility's experience during the years in question, instead of upon a reasonable estimate of expense based upon experience of a prior period. The reasonableness of a rate must be judged in the light of information available at the time it is charged, not in the light of subsequent developments. It is manifestly impractical to conduct a wholesale natural gas business on the basis of annual changes in rates; and certainly it is unreasonable that rates be condemned retroactively on the basis of facts which could not have been known when they were charged.

For the reasons stated, the order of the Commission will be set aside and the cause will be remanded for further proceedings.

Reversed and Remanded.

DOBIE, Circuit Judge, dissenting:

I regret that I must dissent from the majority opinion. The importance of this case, and the wide interest in the vital questions involved, prompt me to set out, very briefly, the reasons for my dissent.

Under the majority opinion, the decision of the Federal Power Commission is reversed on three principal grounds: (1) The adoption by the Commission of the Prudent Investment Theory in fixing the rate-base; (2) The use by the Commission of the Economic Service Life Method in arriving at depreciation; (3) The refusal by the Commission to allow as capital outlay the well-drilling costs which Hope had previously charged to operating expenses.

(1) The Prudent Investment Theory.

The Commission, in arriving at the proper rate-base, frankly and openly adopted the Prudent Investment Theory and paid no attention to the present value of the properties of Hope. Mr. Justice Brandeis, in his classic concurring opinion (Mr. Justice Holmes joined in the opinion) in State of Missouri ex rel. South-

western Bell Telephone Co. v. Public Service Commission of Missouri, 262 U. S. 276, has set forth, with his customary incisive clarity, the Prudent Investment Theory, together with the reasons for his belief in that theory. To my mind, the arguments he therein advances have never been convincingly refuted.

Nearly twenty years have slipped by since that opinion was handed down. During this period, the pronouncements of the United States Supreme Court in this field have been many, varied and quite confusing. This fact has been pointed out by writers whose names are thrice legion. The recent case (involving the Natural Gas Act, with which we are also concerned) of Federal Power Commission v. Natural Gas Pipeline Co., 315 U. S. 575, however, does call for some comment.

The majority opinion in that case (written by Chief Justice Stone) contains no express discussion of the Prudent Investment Theory and certainly does not in precise terms sanction the use of that theory alone. Interesting, though, in this connection is the oft-quoted statement of Chief Justice Stone (315 U. S. at page 586):

"The Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas. Agencies to whom this legislative power has been delegated are free, within the ambit of their statutory authority, to make the pragmatic adjustments which may be called for by particular circumstances. Once a fair hearing has been given, proper findings made and other statutory requirements satisfied, the courts cannot intervene in the absence of a clear showing that the limits of due process have been overstepped. If the Commission's order, as applied to the facts before it and viewed in its entirety, produces no arbitrary result, our inquiry is at an end."

But the concurring opinion of Justices Black, Douglas and Murphy, on the specific point under discussion, is as clear as crystal and as crisp as bacon; for this opinion flatly and squarely upholds the validity of the application of the Prudent Investment Theory, to the exclusion of any other theory (315 U. S. at page 606) in three sentences so free from ambiguity that they cannot be misunderstood:

"As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost or giving any weight to that element of 'fair value'. The Commission may now adopt, if it chooses, prudent investment as a rate base—the base long advocated by Mr. Justice Brandeis. And for the reasons stated by Mr. Justice Brandeis in the *South western Bell Telephone* case, there *could be no constitutional ob-*

*jection if the Commission adhered to that formula and rejected all others.*" [Italics ours.]

It is difficult for me to believe that the majority of the Supreme Court, believing otherwise, would leave such a statement unchallenged.

A careful study of the Natural Gas Act (particularly the precise wording of Section 6) convinces me that Congress intended to give to the Federal Power Commission a wider latitude and a more extended discretion than had been given to any other federal board or commission under any previous statute in the field of rate making.

Further, I think that the methods adopted by the Commission under the Prudent Investment Theory, in arriving at a rate-base in the instant case, were neither fanciful nor arbitrary. It seems to me, too, that there was substantial evidence to support the opposite findings of the Commission.

Accordingly, I see here no adequate reasons for reversing on this score the decision and findings of the Commission.

(2) The Economic Life Service Method of Computing Depreciation.

In computing depreciation and depletion, the Commission employed the Economic Life Service Method. This formula has long been known to, and has been frequently applied by, economists and accountants. It seems to have been often used in connection with depreciation under the federal income tax. I cannot find in this formula any active germs of constitutional invalidity, as it is applied to the instant case.

The Commission based its determination of existing depletion and depreciation upon actual legitimate cost of the properties of Hope. An apparently competent engineer inspected this property to obtain information that would serve as a guide for estimating the property's service life and the amount of money required annually to reimburse Hope for so much of this property as might be consumed in rendering service to the public.

Incidentally, the amount deducted by the Commission fell short by many millions of dollars of the amount accrued and set up by Hope for depreciation and depletion. In his partially dissenting opinion Commissioner Scott expressed the view that the Commission had been, in fixing the amount for depreciation and depletion, far too lenient with Hope.

Again I feel that there was substantial evidence to sustain the Commission's findings under a formula which was neither unrealistic nor capricious.

(3) Disregard of Drilling Costs Charged by Hope to Operating Expenses.

The Commission refused to allow as capital the amount of drilling cost which Hope had in the past charged to operating expenses. The Commission found (and I think this finding is supported by the evidence) that these costs had been considered by Hope in fixing its rates in previous years and that these costs had already been paid by the consumers. On this ground, the Commission declined to include these costs in arriving at the rate-base.

It was the practice of Hope, prior to 1923, to charge well-drilling costs to operating expenses rather than to capital account. In so doing, Hope seems to have followed the then general procedure of the natural gas industry. It changed this practice under a requirement of the Public Service Commission of West Virginia. The present system of accounting prescribed by the Federal Power Commission also follows the West Virginia practice. It is my considered opinion that the present procedure is the proper one.

It is to be noted that this is not a mere mathematical error in book-keeping, which of course, should be corrected. It is rather an accounting policy. It does not seem to me to be vital whether the decision of the Commission here is based upon technical estoppel, equity or fair dealing. And once more, I think the Commission should be here sustained. Under its present claim, Hope seeks to impeach its books, which were competently kept for a long period of years under the older method. And Hope itself, in a previous rate case before the Public Service Commission of West Virginia, claimed these well-drilling costs as operating expenses, its contention was allowed, and its rates were fixed accordingly.

The holding of the Commission here is sustained by the great weight of authority. In the Commission's brief, these authorities are set out at great length, and include decisions of federal courts, decisions of state courts, and decisions of State Utility Commissions. Quite striking here, I think, is an extract from the majority opinion in the recent Natural Pipe Line case (315 U. S. at pages 590, 591):

"Here the companies, though unregulated, always treated their entire original investment, together with subsequent additions, as capital on which profit was to be earned. They charged the out-of-pocket cost of maintenance of plant, whether used to capacity or not, as operating expenses deductible from earnings before arriving at net profits. *They have thus treated the items now sought to be capitalized in the rate base as operating expenses to be compensated from earnings, as in the case of regulated companies.* * * * *We cannot say that the Commission has deprived the companies of their property by refusing to permit them to earn for the future a fair return and amortization on the costs of maintenance of initial excess capacity—costs which the companies fail to show have not already been recouped from earnings before com-*

*puting the substantial 'net profits' earned during the first seven years.*" [Italics ours.]

For the reasons stated, I think the decision and findings of the Commission should be affirmed.

United States Circuit Court of Appeals, Fourth Circuit

No. 4979

HOPE NATURAL GAS COMPANY, PETITIONER

*vs.*

FEDERAL POWER COMMISSION, CITY OF CLEVELAND, CITY OF AKRON, AND PENNSYLVANIA PUBLIC UTILITY COMMISSION, RESPONDENTS.

On Petition for Review of Orders of the Federal Power Commission

*Decree*

Filed and Entered February 16, 1943

This cause came on to be heard upon the petition of the Hope Natural Gas Company to review and set aside certain orders issued against it by the Federal Power Commission on the 26th day of May, 1942, in proceedings before said Federal Power Commission numbered G-100, G-101, G-113 and G-127, entitled "City of Cleveland, Complainant, vs. Hope Natural Gas Company, Defendant"; "City of Akron, Complainant, vs. Hope Natural Gas Company, Defendant"; "In the Matter of Hope Natural Gas Company", and "Pennsylvania Public Utility Commission, Complainant, vs. Hope Natural Gas Company, Defendant", respectively, and upon the transcript of record in said proceedings certified and filed in this Court; and the said cause was argued by counsel.

On consideration whereof, it is ordered, adjudged, and decreed by the United States Circuit Court of Appeals for the Fourth Circuit, that said orders of the Federal Power Commission in said proceedings be, and the same are hereby, set aside; and that this cause be, and the same is hereby, remanded to the said Federal Power Commission for further proceedings in accordance with the opinion of the Court filed herein.

JOHN J. PARKER,
*Senior Circuit Judge.*

MORRIS A. SOPER,
*U. S. Circuit Judge.*

I dissent. A. M. DOBIE, *U. S. Circuit Judge.*

[Endorsed:] "Filed and entered February 16, 1943. Claude M. Dean, Clerk, U. S. Circuit Court of Appeals, Fourth Circuit."

March 5, 1943, petition of the respondents for a stay of the mandate is filed.

*Order staying mandate pending application for a writ of certiorari*

Filed and entered March 8, 1943

(Style of court and title omitted)

Upon the application of the Respondents, by their counsel, and for good cause shown,

It is ordered that the mandate of this Court in the above entitled cause be, and the same is hereby, stayed pending the application of the said Respondents in the Supreme Court of the United States for a writ of certiorari to this Court, unless otherwise ordered by this or the said Supreme Court, and provided said application is filed in the said Supreme Court within 30 days from this date.

JOHN J. PARKER,
*Senior Circuit Judge.*

MARCH 8TH, 1943.

*Clerk's certificate*

UNITED STATES OF AMERICA,
*Fourth Circuit, ss:*

I, Claude M. Dean, Clerk of the United States Circuit Court of Appeals for the Fourth Circuit, do certify that the foregoing four (4) volumes is a true copy of the supplement to brief of petitioner; respondents' appendix, volume I (pleadings, orders, and oral testimony); respondents' appendix, volume II (exhibit book with explanatory statements), and the proceedings in the said Circuit Court of Appeals in the therein entitled cause, as the same remain upon the records and files of the said Circuit Court of Appeals, and constitute and is a true transcript of the record and proceedings in the said Circuit Court of Appeals in said cause, made up in accordance with the directions of the Solicitor General of the United States, for use in the Supreme Court of the United States on an application for a writ of certiorari.

In testimony whereof, I hereto set my hand and affix the seal of the said United States Circuit Court of Appeals for the Fourth Circuit, at Richmond, Virginia, this 13th day of March A. D. 1943.

[SEAL] CLAUDE M. DEAN, *Clerk,*
*U. S. Circuit Court of Appeals, Fourth Circuit.*

# SUPREME COURT OF THE UNITED STATES

No. 34, October Term, 1943

*Order allowing certiorari.—Filed May 17, 1943.*

The petition herein for a writ of certiorari to the United States Circuit Court of Appeals for the Fourth Circuit is granted.

And it is further ordered that the duly certified copy of the transcript of the proceedings below which accompanied the petition shall be treated as though filed in response to such writ.

SUPREME COURT OF THE UNITED STATES

No. 35, October Term, 1943

*Order allowing certiorari.—Filed May 17, 1943*

The petition herein for a writ of certiorari to the United States Circuit Court of Appeals for the Fourth Circuit is granted.

And it is further ordered that the duly certified copy of the transcript of the proceedings below which accompanied the petition shall be treated as though filed in response to such writ.

OCTOBER TERM, 1942

---

No. 890

FEDERAL POWER COMMISSION, CITY OF AKRON AND PENNSYLVANIA PUBLIC UTILITY COMMISSION, PETITIONERS

*v.*

HOPE NATURAL GAS COMPANY

---

**PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE FOURTH CIRCUIT**

---

The Solicitor General on behalf of the Federal Power Commission, the Director of Law on behalf of the City of Akron, and Commission Counsel on behalf of the Pennsylvania Public Utility Commission pray that a writ of certiorari issue to review the judgment of the United States Circuit Court of Appeals for the Fourth Circuit, entered on February 16, 1943, which set aside an order of the Federal Power Commission reducing the rates of respondent, Hope Natural Gas Company, and which set aside the Federal Power Commission's "Findings as to Lawfulness of Past Rates" charged by respondent.

## OPINIONS BELOW

The opinion of the Circuit Court of Appeals (R. IV, 169–207)[1] is not yet officially reported. The opinion of the Federal Power Commission is found at R. I, 1–89.

## JURISDICTION

The judgment of the Circuit Court of Appeals was entered on February 16, 1943 (R. IV, 207). The jurisdiction of this Court is invoked under Section 240 (a) of the Judicial Code, as amended by the Act of February 13, 1925, and Section 19 (b) of the Natural Gas Act.

## STATUTE INVOLVED

The pertinent provisions of the Natural Gas Act of 1938 (52 Stat. 821; 15 U.S.C. § 717) are set forth in Appendix A, *infra,* pp. 29–35.

## QUESTIONS PRESENTED

The Federal Power Commission, after complaints by the Cities of Cleveland and Akron and the Pennsylvania Public Utility Commission, and after extensive hearings, found that respondent's interstate rates were unreasonable and unlawful and issued an order reducing respondent's future rates by $3,609,857 annually. The Commission adopted a prudent investment rate base. The court below invoked the "present fair value"

[1] In the record citations, roman numerals refer to the volume, arabic numerals to the page.

theory to set aside the Commission's findings and order. The questions presented are:

1. Whether, for rate-making purposes under the Natural Gas Act, the Commission is authorized to use a rate base determined exclusively upon the basis of prudent investment, measured by "actual legitimate cost" less depreciation,[2] or whether it must use a rate base which reflects estimates of the extent and effect of post-investment fluctuations in labor and material prices.

2. Whether the Commission must include in "actual legitimate cost" amounts previously and correctly charged by respondent to operating expenses, in accordance with industry practice of the time, and determined by the Commission to have been recouped through revenues received from rate payers.

3. Whether the Commission may determine actual existing (accrued) depletion and depreciation, and the annual allowance in operating expenses for these factors, upon the basis of "actual legitimate cost", or whether the Commission must base such

[2] "Actual legitimate cost" (which Section 6 (a) of the Natural Gas Act authorizes the Commission to ascertain for natural-gas companies) less existing depreciation has been interpreted by the Commission to be "prudent investment." *Re Canadian River Gas Company*, 43 P. U. R. (N. S.) 205; *Detroit* v. *Panhandle Eastern Pipe Line Co.*, 45 P. U. R. (N. S.) 203; see *Re Chicago District Electric Generating Corp.*, 39 P. U. R. (N. S.) 265.

determinations upon estimates of the "present fair value" of the property.

4. Whether the court below erred in holding that in determining the actual existing (accrued) depletion and depreciation, the Commission failed to take into account "the present condition of the property."

5. Whether the economic-service-life principle, as applied by the Commission in this case, is a reasonable method of determining the actual existing depletion and depreciation and the annual allowance therefor.

6. Whether the court below erred in holding that $165,963 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941, should have been included in 1940 operating expenses.

7. Whether the rates fixed by the Commission are just and reasonable in the statutory sense and nonconfiscatory in the constitutional sense.

8. Whether the Commission has jurisdiction to determine the *lawful* rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order.

9. Whether the court below erred in holding that the Commission's "findings as to past rates * * * should be set aside."

## STATEMENT

### THE RESPONDENT

Hope Natural Gas Company ("Hope"), a wholly owned subsidiary of the Standard Oil Company (New Jersey), is conceded to be a "natural-gas company" within the meaning of the Natural Gas Act (R. III, 19). Hope purchases and produces natural gas in West Virginia, transports it in pipe lines to the West Virginia-Ohio and West Virginia-Pennsylvania state lines, and there sells it in interstate commerce to its affiliates, East Ohio Gas Company and River Gas Company, for resale to ultimate consumers in Ohio; to its affiliate, Peoples Natural Gas Company, for resale to ultimate consumers in Pennsylvania; and to the nonaffiliated Manufacturers Light and Heat Company and Fayette County Gas Company for resale in Pennsylvania (R. I, 17). About 80% of Hope's total sales are in interstate commerce and 95% of such sales are to its aforementioned affiliates (R. I, 18). About 20% of Hope's total volume of gas is sold in intrastate commerce to local consumers in West Virginia. Hope has been purchasing, producing, transporting and selling natural gas for more than forty years. Hope's interstate sales in 1940 amounted to about 53,000,000 MCF, and its interstate gross revenues in that year amounted to $19,296,755 (R. I, 51).

## THE STATUTE

The Natural Gas Act (the "Act"), effective June 21, 1938, requires that all rates or charges in connection with the transportation or sale of natural gas subject to the Act be just and reasonable and declares any rate or charge that is not just and reasonable to be unlawful (Sec. 4 (a)). It provides that the Federal Power Commission (the "Commission"), upon complaint of any State, municipality, State commission, or gas distributing company, or upon its own motion, whenever it finds that any rate is unjust or unreasonable, shall determine the rate to be thereafter observed and in force, and shall fix the same by order; and, further, that the Commission "may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates" (Sec. 5 (a)). Any State, municipality, or State commission, complaining of anything done or omitted to be done by any natural gas company in contravention of the provisions of the Act, may file a complaint with the Commission (Sec. 13).

Under Section 14 (a) the Commission may investigate any matter "to determine whether any person has violated or is about to violate any provision of this Act" and "make available to State commissions and municipalities, information concerning any such matter." Section 16 empowers the Commission to perform any and all acts it

may find necessary or appropriate to carry out the provisions of the Act. And Section 17 (c) requires the Commission to make available to the several State commissions "such information and reports as may be of assistance in State regulation of natural-gas companies."

THE PROCEEDINGS BEFORE THE COMMISSION

In July 1938, the Cities of Cleveland and Akron filed complaints with the Commission, charging that the rates collected by Hope from East Ohio Gas Company were excessive and unreasonable (R. II, 1, 7). In October 1938, the Commission, on its own motion, instituted an investigation to determine the reasonableness of all of Hope's interstate rates (R. II, 28). In March 1939, the Pennsylvania Public Utility Commission filed a complaint with the Commission, charging that the rates collected by Hope from Peoples Natural Gas Company, Manufacturers Light and Heat Company, and Fayette County Gas Company were unreasonable (R. II, 18). The City of Cleveland's complaint, as amended and modified, prayed specially for a determination by the Commission that Hope's collected rates from East Ohio were unreasonable and therefore unlawful, and for a determination of just and reasonable Hope-East Ohio rates from June 30, 1939, to the date of the Commission's decision, requesting such determinations "in the aid of State regula-

tion" and particularly to afford the Public Utilities Commission of Ohio a proper basis for disposition of a fund collected by East Ohio under bond from Cleveland consumers during the period since June 30, 1939 (R. II, 14).[3] In October 1939, the Federal Power Commission consolidated the three complaint cases and its own investigation of Hope's interstate wholesale rates for hearing (R. II, 34). Hearings were held in 1940[4] and 1941, and after briefs were filed, the

---

[3] The fund represents the difference between East Ohio's previous rates and the lower rates established by ordinance of the City of Cleveland, which East Ohio is collecting pending its appeal from the ordinance to the Public Utility Commission of Ohio, under §§ 614–44 *et seq.* of the Ohio General Code. See *Public Utilities Comm. of Ohio* v. *United Fuel Gas Co.*, No. 87, October Term, 1942, decided January 11, 1943, slip sheet, p. 5.

Representing that the Ohio Commission's determination of the reasonableness of the retail rate established by the City of Cleveland for sales by East Ohio to Cleveland consumers, for the years in which the fund was accumulated, "was ultimately dependent upon the lawfulness" of Hope's charge to East Ohio (R. II, 45), the City in its amended complaint of January 6, 1939, requested the Power Commission to determine the lawful wholesale rates from and after June 21, 1938, to the effective date of its order fixing Hope's rates. In a brief subsequently filed before the Power Commission, it limited the request to cover rates charged from and after June 30, 1939, for the reason that a settlement had made the question moot with respect to the earlier period originally covered.

[4] On December 20, 1940, the Commission denied without prejudice a motion of the Cities of Cleveland and Akron for an immediate order reducing the Hope-East Ohio rate upon Hope's own testimony, for the reason that "there is

case was argued orally before the Commission sitting *en banc* on October 27, 1941 (R. II, 48). The Commission decided the case on May 26, 1942, when it entered an "Order Reducing Rates" charged by Hope and, in addition, separate "Findings as to Lawfulness of Past Rates" collected by Hope from East Ohio (R. I, 1, 8).

### The Commission's Determinations

The Commission's "Order Reducing Rates" required Hope to reduce its interstate rates for the future to reflect a reduction of not less than $3,609,857 in operating revenues on an annual basis (R. I, 6). More particularly, the order required minimum reductions of 7 cents per MCF from the 36.5¢ and 35.5¢ rates previously charged East Ohio and Peoples Natural Gas, respectively, and 3 cents per MCF from the 31.5¢ rate previously charged Fayette County Gas and Manufacturers Light and Heat Company (R. I, 73–74). The Commission's "Findings as to Lawfulness of Past Rates", made in deciding the complaint of the City of Cleveland, determined that the rates collected by Hope from East Ohio were unjust, unreasonable, excessive, and therefore unlawful, by $830,892 in 1939, $3,219,551 during 1940, and

---

insufficient evidence of record, at this time, to support the prayer for relief requested by the movants," and subject to the reservation that "this order is not to be construed as a determination of any of the issues in the pending principal proceedings" (R. II, 43).

$2,815,789 on an annual basis since 1940; and further determined just and reasonable rates for gas sold to East Ohio for resale for ultimate public consumption to be $11,528,608 for 1939, $11,507,185 for 1940, and $11,910,947 on an annual basis for 1941 and the first half of 1942 (R. I, 12–13).

The Commission founded its "Order Reducing Rates" upon a rate base of $33,712,526, upon which it granted respondent a 6½% rate of return, or $2,191,314 annually (R. I, 4). This rate base was determined to be the actual legitimate cost of Hope's interstate property less existing depletion and depreciation, plus allowances for unoperated acreage, working capital, and future net capital additions (R. I, 50).

The Commission's rate base was arrived at substantially as follows: The Commission found that Hope had kept complete documentary evidence, through books, records and vouchers, of its expenditures throughout its existence, so that no estimates were required to ascertain the actual legitimate cost (R. I, 23, 174). Pursuant to a check of the inventory of Hope's property in service, and pursuant to an examination, analysis, and audit of respondent's records, the Commission determined the cost to be $52,174,873 for the property devoted to the interstate sales, as of December 31, 1940 (R. I, 34–36; R. III, 25–32, 69, 287). From this amount, the Commission then deducted accrued depletion and depreciation, which it found

to be $22,328,016 (R. I, 45, 50).[5] It arrived at this figure by applying the economic-service-life method to actual legitimate cost (R. I, 41). In making these determinations the Commission was guided by a study conducted by a qualified staff engineer, who made a field inspection of the Company's physical properties to aid in the determination of service lives (R. I, 42; III, 158). The Commission then added $1,392,021 for future net capital additions, $566,105 for useful unoperated acreage, and $2,125,000 for working capital, yielding the total rate base of $33,712,526 (R. I, 50).

Using 1940 as a test year to forecast future revenues, and forecasting expenses at the 1940 figure plus $421,169, the Commission allowed respondent operating expenses and taxes amounting to $13,495,584 (R. I, 62, 70, 72). Of this total $1,460,037 represented the annual allowance for depreciation and depletion (R. I, 53). This allowance was determined by the Commission in the same way as the actual existing depreciation and depletion, by the application of the economic-

[5] The actual existing depletion and depreciation found by the Commission came to about $24,000,000 less than the depletion and depreciation which the Company had accrued on its books (R. I, 81). One of the Commissioners dissented on the ground that the Commission should have deducted accrued depreciation and depletion of not less than $38,000,000, the reserve remaining on the Company's books after it had transferred $7,500,000 from the reserve to surplus (R. I, 81).

service-life method to the actual legitimate cost of respondent's properties (R. I, 51–52).

The Commission's "Findings as to Lawfulness of Past Rates" were arrived at on the same principles and in substantially the same manner as the "Order Reducing Rates," except that they were based on actual operating experience for the years in question, instead of a test year (R. I, 11).

In issuing its order and findings the Commission rejected respondent's argument that post-investment changes in price levels had to be reflected in the rate base and in computing both accrued depreciation and depletion and the annual allowance in operating expenses for these items (R. I, 20–23, 36, 41, 52). It condemned as hypothetical and without probative value the "reproduction cost new" and "trended original cost" estimates (amounting to approximately $97,000,000 and $105,000,000, respectively) submitted in evidence by respondent in support of its claimed rate base of some $66,000,000 (R. I, 20–23). The Commission also rejected respondent's contention that, in any event, the rate base should have reflected an additional sum of about $17,000,000, representing largely expenditures for well drilling prior to 1923, which respondent had charged to operating expenses (R. I, 24–34). Likewise unsuccessful was respondent's espousal of the "percent condition" theory of measuring accrued depreciation (R. I, 38).

Pursuant to Section 19 of the Act, Hope filed an application for rehearing (R. II, 51), and upon denial petitioned the United States Circuit Court of Appeals for the Fourth Circuit for a review of the Commission's "Order Reducing Rates" and the Commission's "Findings as to Lawfulness of Past Rates" (R. IV, 3).[6]

## The Opinion Below

On review, the court below, with one judge dissenting, set aside the Commission's "Order Reducing Rates" on the basic grounds that: (1) the Commission's use of a prudent investment rate base failed to reflect "present fair value", in view of the post-investment "decided change" in price levels shown by the record and by judicially noticeable facts (R. IV, 172, 183–184); (2) the Commission erroneously excluded from the rate base the well-drilling costs previously incurred and charged to operating expenses prior to 1923. (R. IV, 172, 184–189); (3) the Commission improperly determined accrued depreciation on the basis of "theoretical formulas", without considering the present physical condition of respondent's property (R. IV, 172, 189–190); (4) the Commis-

[6] Hope did not seek a stay of the Commission's order from the Circuit Court of Appeals and such order has not been stayed; instead Hope agreed with its customer companies to charge the ordered rates pending litigation, upon the customers' agreement to make Hope whole if the Commission's order should be finally invalidated.

sion should have based its annual allowance in operating expenses for depreciation and depletion upon the "present fair value" of the physical property, instead of upon actual legitimate cost (R. IV, 192–198); (5) the Commission should have included in 1940 operating expenses $165,963 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941 (R. IV, 198); (6) the Commission should have made an annual allowance for depreciation and depletion on capital added to the rate base after 1940 (R. IV, 196).

The court also set aside the Commission's "Findings as to Lawfulness of Past Rates", holding that: (1) the Commission had no jurisdiction to make findings as to lawfulness of past rates "to be given effect in rate proceedings before state commissions", and that rates filed with the Commission under Section 4 (c) of the Act became the only "lawful" ones which the utility could charge or accept until changed by the Commission; (2) the Commission could investigate "the conditions and rates of the past" as an incident of its power to fix future rates, but that so viewed the findings in question were invalid for the same reasons as its "Order Reducing Rates", and were also objectionable in that they were based on actual experience for the years in question, rather than reasonable estimates of ex-

pense based on experience during a prior period (R. IV, 200, 202).[7]

**REASONS FOR GRANTING THE WRIT**

This case is one of great public significance. The vital issue underlying the main questions presented is whether the Federal Power Commission may employ the prudent investment method of rate-making. The decision of these questions is of first importance not only in the adminstration of the Natural Gas Act of 1938,[8] but in the general

[7] On March 8, 1943, the Circuit Court of Appeals granted a motion for the stay of its mandate pending further order, upon the condition that a petition for writ of certiorari be filed with the Supreme Court of the United States within thirty days (R. 209).

[8] Four Power Commission cases involving gas companies, with prudent investment rate bases aggregating $87,000,000, are now pending in the Eighth and Tenth Circuit Courts of Appeals. *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, No. 12466 (C. C. A. 8th); *Colorado Interstate Gas Co.* v. *Federal Power Commission*, No. 2550 (C. C. A. 10th); *Canadian River Gas Co.* v. *Federal Power Commission*, No. 2551 (C. C. A. 10th); *Colorado-Wyoming Gas Co.* v. *Federal Power Commission*, No. 2561 (C. C. A. 10th).

The $3,750,000 interim rate reduction approved in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, was followed by a final consent rate reduction of an additional $2,750,000 and was based solely on prudent investment. F. P. C. Order Accepting Reduced Rates For Filing And Terminating Proceedings, September 19, 1942. Additional consent reductions in natural gas rates were obtained by the Commission's insistence upon prudent investment rate bases in the following cases: *Lone Star Gas Co.*, F. P. C. Docket Nos. G-208, G-209, May 4, 1942. Order Re-

field of public rate regulation—to every rate-making body throughout the nation, to the public utilities regulated, and to the countless consumers of public utility services. In passing upon these questions the court below divided, being unable to agree upon the proper meaning, and application to the facts at bar, of this Court's recent decision in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, which arose under the same statute. The correct meaning and application of that decision are matters which only this Court can finally resolve, and which in the public interest should be resolved. Moreover, in our view the decision of the majority of the court below on several of the basic questions presented is in conflict with decisions of this Court.

(1) The Commission's "Order Reducing Rates" was upset below on the fundamental ground that both the Constitution and the Natural Gas Act command the Commission to adopt a rate base which reflects "present fair value" by giving effect to post-investment fluctuations in price levels, and accordingly that the Commission lacks

---

ducing Rates by $2,053,564 per year; *El Paso Natural Gas Co.*, F. P. C. Docket Nos. G-242, G-257, October 29, 1942, Order Reducing Rates by $526,000 per year; *Northern Natural Gas Co.*, February 4, 1943, Order Making Effective Reductions In Rates by $2,087,000 per year.

There are now pending before the Power Commission rate cases involving companies with properties showing investment per books of about $574,000,000 and whose annual revenues total $110,000,000.

authority to use a rate base representing actual legitimate cost less depreciation (i. e., prudent investment), except where such base also reflects "present fair value" (R. IV, 183).[9]

The net effect of the decision below, in both its constitutional and statutory aspects, is to confine the Commission's freedom to use prudent investment to cases in which its application would yield a rate base equivalent in general to that which would be derived under theories founded on the eminent-domain concept of present value, such as "reproduction cost new" and "trended original cost."[10] But, from the standpoint of sound economic, accounting, and legal principles alike, there is grave doubt whether eminent-domain concepts of present value have any proper place in public-utility rate making. See Brief for the Federal Power Commission and Illinois Commerce Commission, Nos. 265 and 268, October

---

[9] The dissenting judge, on the other hand, construed this Court's decision in the *Pipeline* case to hold that there was no constitutional objection to the Commission's exclusive use of the prudent investment method and concluded that the Commission's order was within the scope of its statutory authority, reasonable, and supported by substantial evidence (R. IV, 203-205).

[10] The substantial identity of the "reproduction cost new" and "trended original cost" theories is well illustrated by respondent's respective valuation estimates under each of those theories in the present case—$97,000,000 under the former and $105,000,000 under the latter. These estimates contrast sharply with the actual legitimate cost of $52,000,000 found by the Commission (R. I. 20-21, 36).

Term, 1941, p. 112, *et seq.* Much less should it be judicially enforced as the exclusive determinant of the constitutional validity of every exercise of the rate-making power, for "the Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas." *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 586. The view of the majority below would restrict that freedom of choice by imposing the condition that the formula chosen in any case must yield a result generally equivalent to that which would be obtained under eminent-domain formulas. There is no reasonable basis for interpolating any such condition into the *Pipeline* opinion. As the Court there held, the limit of judicial inquiry in these cases is to determine whether "the Commission's order, as applied to the facts before it and viewed in its entirety, produces [an] arbitrary result." *Federal Power Commission* v. *Natural Pipeline Co.*, 315 U. S. 575, 586.[11]

[11] The *Pipeline* case forecloses the contention that a rate order founded upon a prudent investment rate base is arbitrary simply because a larger rate base would result from the adoption of a formula reflecting prevailing price levels. For example, the decision there sustained the use of an amortization base reflecting actual legitimate cost regardless of the fact that another basis of determination, taking into account post-investment fluctuations in price levels, would have yielded a larger sum. It is immaterial whether the question concerns the propriety of using actual legitimate cost in determining the rate base or in determining the

The decision below is equally inadmissible upon statutory grounds. If, as this Court held in the *Pipeline* case, the Commission is authorized under the Natural Gas Act to use actual legitimate cost to determine the amortization base, it is equally authorized to do so in determining the rate base. The one is no more integral in the rate-making process than the other (*cf. Lindheimer* v. *Illinois Tel. Co.*, 292 U. S. 151, 164), and nothing in the statute suggests that a different result was intended. See Sections 5 (a) and 6. Indeed, as the dissenting judge below concluded, the statute grants the Commission a very broad discretion with respect to its rate-making powers within its jurisdictional sphere (R. IV, 205).

(2) The majority below incorrectly held that $17,000,000, largely representing well-drilling costs incurred prior to 1923[12] and charged by re-

---

amortization base; the principles involved are the same and in terms of the ultimate issue, namely, the rates which the utility is entitled to charge, the answer is of comparable importance. *Cf. Lindheimer* v. *Illinois Tel. Co.*, 292 U. S. 151, 164–170.

[12] The $17,000,000 figure is before depreciation. After depreciation it amounts to about $4,000,000, as the court below noted (R. IV, 184).

Although the lower court's opinion suggests otherwise, not all of the $17,000,000 in question represented well-drilling costs which the Commission rejected because they had previously and properly been charged to operating expense. In particular, one item of $632,000 included in this aggregate figure, claimed as "interest during construction," was dis-

spondent to operating expenses, must now be capitalized and reflected in the rate base. This result was reached on the rationale that the items in question were "erroneously charged to expense" (R. IV, 189), instead of to capital, and that it was immaterial whether, as the Commission found, the cost of these items had been recouped in the form of revenues realized from rate payers because—

> * * * the customers paid for gas, not for the construction of wells, and * * * neither the cost of the wells nor the company's ownership thereof is affected by the fact that it may have paid for them with the proceeds of rates that were unreasonably high (R. IV, 186).

This reasoning embodies two fundamental errors. First, the items in question were not in fact "erroneously" charged to expense. As the Commission found in accordance with the evidence, until 1923[13] it was Hope's "consistent practice * * * to charge the cost of drilling wells to operating expense" (R. I, 27, 251–254; IV, 206); in so doing, Hope followed the general practice of the natural gas industry and "the well-

---

allowed by the Commission on the ground that it was never incurred (R. I, 24, 180). The failure to notice this below was apparently an inadvertence.

[13] In 1923, the West Virginia Public Service Commission, pursuant to its jurisdiction over intrastate rates, required Hope to change this accounting practice for future well-drilling expenditures (R. I, 28).

established practice of extractive industries." a practice which was based upon the underlying theory "that additional wells were constantly needed to keep the Company in business, hence the cost incurred was not for the purpose of adding to the property but rather for the purpose of maintaining the business" (R. I, 27).

Secondly, in overriding the Commission's determination against capitalizing items previously and properly [14] treated as operating expense to be compensated from revenues received from rate payers, the prevailing judges below failed to give effect to prior decisions of this Court, *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 590–591; *R. R. Comm.* v. *Cumberland Tel. & Tel. Co.*, 212 U. S. 414, 424 *et seq.* The applicable rule was plainly stated in the *Pipeline* case as follows (315 U. S. 575, at 591):

> * * * They [the companies] have thus treated the items now sought to be capitalized in the rate base as operating expenses to be compensated from earnings, as in the case of regulated companies * * *.
>
> * * * * *
>
> We cannot say that the Commission has deprived the companies of their property by

[14] The Commission stressed the fact that the charge to operating expense was proper under the universal accounting practice prevailing in the industry at the time. It recognized that "genuine" accounting errors would probably warrant correction, and actually made such corrections where such errors were found in this case. See R. I, 31, 33, 35.

> refusing to permit them to earn for the future a fair return and amortization on the costs of maintenance of initial excess capacity—costs which the companies fail to show have not already been recouped from earnings before computing the substantial "net profits" earned during the first seven years.

This proposition is decisive here, since Hope has failed to show that the well-drilling costs "have not already been recouped from earnings."[15]

(3) The decision below erroneously condemned the Commission's application of the economic-service-life principle to determine actual existing (accrued) depreciation and depletion and the determinations based thereon. Conceding that the "formulas" which the Commission used were "undoubtedly important matters for it to take into consideration" (R. IV, 190), the court below rebuked the Commission for failing to consider, in addition, the "actual present conditions" of re-

---

[15] Nor could respondent in good conscience make such a showing. For, as the Commission pointed out, Hope not only claimed and was allowed the expenditures in issue here as operating expenses when it successfully sought a rate increase in 1921 before the West Virginia Public Service Commission, but its "average rate of earnings on the annual average invested capital (capital stock and surplus) was more than 15%" between 1898 and 1923, the period when the well-drilling expenditures in question were made (R. I, 34; III, 13–14). See *Re Hope Natural Gas Co.*, P. U. R. 1921 F, 418, 433, 440.

spondent's properties, and for allegedly computing accrued depreciation solely on the basis of theoretical formulas (R. IV, 172, 190).

These objections ignore the fact specifically explained by the Commission and noted by the dissenting judge (R. IV, 205) that the determinations in question were based upon the testimony of "a properly qualified Staff engineer who * * * considered the functional and physical aspects of depreciation [and] as an aid in the determination of service lives * * * made a field inspection of the Company's physical properties" (R. I, 42; III, 158).[16] Moreover, the "formula" employed is the very economic-service-life principle which this Court has heretofore endorsed (R. I, 37). Cf. *Lindheimer* v. *Illinois Tel. Co.*, 292 U. S. 151, 167; *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 592–593.

(4) Relying on *United Railways* v. *West*, 280 U. S. 234, 253–254, the court below condemned the Commission's action in computing the annual allowance for depreciation and depletion upon the basis of actual legitimate cost. This holding runs counter to prior decisions of this Court. *Cf. Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 592–593; *Lindheimer* v.

[16] The result reached by the Commission is hardly arbitrary or confiscatory inasmuch as the amount it found came to some $24,000,000 less than the reserve accrued on respondent's books for depreciation and depletion.

*Illinois Tel. Co.*, 292 U. S. 151, 164, *et seq.*;[17] compare *United States* v. *Ludey*, 274 U. S. 295, 300–302.

The majority below sought to distinguish the *Pipeline* case in this connection on the ground that the Court there "dealt with * * * 'a wasting-asset business of limited life,'" rather than "an ordinary public utility which is required by law to continue its service to the public." (R. IV( 195.) But this ignores the controlling principles recognized in the *Pipeline* case. The mere absence here of an accord as to the time of exhaustion of respondent's gas reserves, present in the *Pipeline* case, should not endow respondent with a constitutional right to have its depreciation and depletion allowance computed upon a basis which will compel rate payers to return more than the amount invested. Regardless of the nature of respondent's business,[18] it suffices in reason and principle that the annual allowance provided by the Commission is based upon equitable determinations of the life of respondent's existing investment and

[17] Although the court below refused so to acknowledge, the *Lindheimer* opinion recognizes cost as a permissible basis of computing the depreciation allowance, and thus modifies the doctrine of the earlier *West* case, *supra*, that the allowance must reflect post-investment price advances. This was plainly recognized by Mr. Justice Butler, one of the majority in the *West* case, concurring specially in the *Lindheimer* case. *Lindheimer* v. *Illinois Tel. Co.*, 292 U. S. 151, at 176.

[18] The utility involved in the *Lindheimer* case, for example, was hardly "a wasting-asset business of limited life."

will reimburse respondent to the amount of that investment.

To insist, as did the court below, upon a present value yardstick for computing the annual allowance, on the theory that plant replacements will eventually have to be made, obscures realities. Present value at any given date has no predictable relation to future replacement cost (see Brandeis, J., dissenting in *United Railways* v. *West*, 280 U. S., 234 at 278) and is certainly no more reliable a test for this purpose than the cost basis adopted by the Commission. See Stone, J., dissenting, *id.*, at 289–291. On the other hand, actual replacement costs are reflected by the Commission's method. If replacements are in fact made at a cost higher than the original cost of the property retired, the actual legitimate cost will be correspondingly increased, as will the annual return and the annual allowance for depreciation and depletion. To use the cost basis is "the rule sanctioned by the universal practice of business men and governmental departments" (see Brandeis, J., dissenting, *id.*, at 275; and see Brief for the Federal Power Commission and Illinois Commerce Commission in Nos. 265 and 268, October Term, 1941, pp. 72–74). The Commission's adherence to regular business usage cannot reasonably be condemned as arbitrary or confiscatory.

(5) The court below erred in setting aside the Commission's "Findings as to Lawfulness of Past

Rates." The gist of the decision below in this aspect seemingly is that while the Commission, in fixing future rates, may examine into the reasonableness of past rates, its determination that they were unreasonable does not affect their past lawfulness. This anomalous result, besides depriving Section 4 (a) of any meaning, is incompatible with the purpose of the Act and with prior decisions of this Court. For if the Commission is without authority to determine lawful past rates, either rate payers will be subjected to the risk of being left without a forum in which to challenge the validity of interstate wholesale gas rates prevailing between the date of the Act's passage and the effective date of a Commission rate-fixing order. (*Cf. Public Utilities Comm. of Ohio* v. *United Fuel Gas Co.*, No. 87, October Term, 1942, decided January 11, 1943; *Texas & Pac. Ry.* v. *Abilene Cotton Oil Co.*, 204 U. S. 426) or, if other forums might nevertheless be found to have jurisdiction over such issues, the way would be paved for inconsistent adjudications by a variety of tribunals—the very "confusion of functions" which the Act was designed to avoid (*United Fuel Gas* case, *supra*, slip sheet p. 8) and which this Court long ago condemned in the *Abilene* case, *supra* (204 U. S. at 440).[19]

---

[19] Moreover the rationale underlying the lower court's conclusion in this regard is untenable. There is no warrant for contorting the Commission's lack of authority to award

Conversely, the recognition of the Commission's jurisdiction to determine what are lawful interstate wholesale rates dating back to the passage of the Act will effectuate the legislative objective of a "harmonious, dual system of regulation of the natural gas industry—federal and state regulatory bodies operating side by side * * *. See *Public Utilities Comm. of Ohio* v. *United Fuel Gas Co., supra,* slip sheet p. 8.

To the extent that the substantive grounds for the lower court's rejection of the "Findings as to Lawfulness of Past Rates" are the same as those upon which is disapproved the "Order Reducing Rates," the considerations outlined in points 1 to 4, *supra,* are equally applicable. The independent substantive point raised in opposition to the findings, that the Commission erred in using actual experience to determine the reasonableness of past rates, is answered conclusively by *West Ohio Gas Co.* v. *Public Utilities Comm.,* 294 U. S. 79, 82.

---

reparations into a proscription of its jurisdiction to inquire into the lawfulness of past rates. *Cf. Atlantic Coast Line R. Co.* v. *Florida,* 295 U. S. 301, 312; *United States* v. *Morgan,* 307 U. S. 183, 192. And the significance ascribed to the act of filing rates overlooks entirely the distinction drawn by this Court between "legal" and "lawful" rates. *Cf. Arizona Grocery Co.* v. *Atchison, Topeka & Santa Fe Ry. Co.,* 284 U. S. 370, 384.

## CONCLUSION

For the foregoing reasons it is respectfully submitted that the petition for a writ of certiorari should be granted.

## APPENDIX

The pertinent provisions of the Natural Gas Act of 1938, c. 556, 52 Stat. 821, *et seq.* (15 U. S. C. § 717) are as follows:

SEC. 4. (a) All rates and charges made, demanded, or received by any natural-gas company for or in connection with the transportation or sale of natural gas subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges, shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful.

(b) No natural-gas company shall, with respect to any transportation or sale of natural gas subject to the jurisdiction of the Commission, (1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.

(c) Under such rules and regulations as the Commission may prescribe, every natural-gas company shall file with the Commission, within such time (not less than sixty days from the date this Act takes effect) and in such form as the Commission may designate, and shall keep open in convenient form and place for public inspection, schedules showing all rates and

charges for any transportation or sale subject to the jurisdiction of the Commission, and the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services.

* * * * *

SEC. 5. (a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, municipality, State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however,* That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates.

* * * * *

SEC. 6. (a) The Commission may investigate and ascertain the actual legitimate

cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

* * * * *

SEC. 9. (a) The Commission may, after hearing, require natural-gas companies to carry proper and adequate depreciation and amortization accounts in accordance with such rules, regulations, and forms of account as the Commission may prescribe. The Commission may from time to time ascertain and determine, and by order fix, the proper and adequate rates of depreciation and amortization of the several classes of property of each natural-gas company used or useful in the production, transportation, or sale of natural gas. Each natural-gas company shall conform its depreciation and amortization accounts to the rates so ascertained, determined, and fixed. * * *

* * * * *

SEC. 13. Any State, municipality, or State commission complaining of anything done or omitted to be done by any natural-gas company in contravention of the provisions of this Act may apply to the Commission by petition, which shall briefly state the facts, whereupon a statement of the complaint thus made shall be forwarded by the Commission to such natural-gas company, which shall be called upon to satisfy the complaint or to answer the same in writing within a reasonable time to be specified by the Commission.

SEC. 14. (a) The Commission may investigate any facts, conditions, practices, or matters which it may find necessary or proper in order to determine whether any person has violated or is about to violate any provision of this Act, or any rule, regulation, or order thereunder, or to aid in the enforcement of the provisions of this Act or in prescribing rules or regulations thereunder, or in obtaining information to serve as a basis for recommending further legislation to the Congress. The Commission may permit any person to file with it a statement in writing, under oath or otherwise, as it shall determine, as to any or all facts and circumstances concerning a matter which may be the subject of investigation. The Commission, in its discretion, may publish in the manner authorized by section 312 of the Federal Power Act, and make available to State commissions and municipalities, information concerning any such matter.

* * * * * *

SEC. 16. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, amend, and rescind such orders, rules, and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed. Unless a different date is specified therein, rules and regulations of the Commission shall be effective thirty days after publication in the manner

which the Commission shall prescribe. Orders of the Commission shall be effective on the date and in the manner which the Commission shall prescribe. For the purposes of its rules and regulations, the Commission may classify persons and matters within its jurisdiction and prescribe different requirements for different classes of persons or matters. All rules and regulations of the Commission shall be filed with its secretary and shall be kept open in convenient form for public inspection and examination during reasonable business hours.

* * * * *

SEC. 17. (c) The Commission shall make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies. Whenever the Commission can do so without prejudice to the efficient and proper conduct of its affairs, it may, upon request from a State commission, make available to such State commission as witnesses any of its trained rate, valuation, or other experts, subject to reimbursement of the compensation and traveling expenses of such witnesses. All sums collected hereunder shall be credited to the appropriation from which the amounts were expended in carrying out the provisions of this subsection.

* * * * *

SEC. 19. (b) Any party to a proceeding under this Act aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in

the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall

be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in while or in part, any such order of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

|---|---|
| Opinions below | 1 |
| Jurisdiction | 2 |
| Statute involved | 2 |
| Questions presented | 2 |
| Statement: | |
| The Company | 4 |
| The statute | 6 |
| Proceedings before the Commission | 7 |
| The Commission's determinations | 9 |
| Decision of the circuit court of appeals | 13 |
| Summary of argument | 15 |
| Argument: | |
| I. Viewed in its entirety, the Commission's order prescribing rates complies with the statutory requirements and is not confiscatory | 21 |
| A. Scope of judicial review | 21 |
| B. Viewed in their entirety, the Commission's prescribed rates are plainly not arbitrary | 25 |
| 1. Hope's financial history | 25 |
| 2. Actual experience under prescribed rates | 26 |
| 3. The rate base sought by Hope does not square with its financial history | 28 |
| 4. Doubtful items of substantial amount were resolved by the Commission in Hope's favor | 30 |
| II. The Commission may properly use a "prudent investment" rate base | 33 |
| A. The Natural Gas Act contemplates use of prudent investment in determining rate base, subject to constitutional limitations | 36 |
| B. There is no constitutional prohibition against the determination of a rate base solely on prudent investment | 40 |
| C. The court below erred in requiring that price trends be utilized in determining the rate base | 42 |
| 1. There is no evidence that present value is greater than original cost | 43 |
| 2. Results obtained by use of price trend factors are illusory and unreliable | 44 |

Argument—Continued.

II. The Commission may properly use a "prudent investment" rate base—Continued. Page

D. The rule of *Smyth* v. *Ames* should be renounced. 49

1. The fair value rule is based on eminent domain concepts. 53

2. The eminent domain concept of present fair value is inapplicable to rate regulation. 55

3. Rate regulation should be deemed violative of due process only if arbitrary or unreasonable. 60

4. It is not unreasonable to limit the earnings of a utility to a fair return upon the capital prudently invested. 64

III. The Commission properly excluded from actual legitimate cost the intangible costs of well drilling and other items properly charged to operating expense prior to 1923 and fully recouped from ratepayers. 70

A. Nature of contested items. 71

B. Prior to 1923, Hope intentionally and properly charged well-drilling costs to operating expenses. 75

C. The well-drilling costs were fully recovered through rates and should not now form a base for further annual return. 78

D. Practical considerations support the Commission's exclusion of these items from the rate base. 86

E. Remaining items excluded from the rate base. 88

IV. The Commission properly used the economic-service-life principle in determining accrued depreciation and depletion. 89

V. The Commission properly used a prudent investment base in determining the annual allowance for depreciation and depletion. 99

VI. Hope was not harmed by the exclusion from 1940 operating expenses of $165,963 for an experimental deep-test well. 109

VII. The Commission's findings as to the lawfulness of past rates were proper and, if reviewable, should be upheld. 110

A. The Commission's "findings as to the lawfulness of past rates" may not be reviewable here. 112

B. The Commission has authority to make findings as to lawfulness of past rates "as an aid to state regulation". 115

C. The Commission's findings that past rates were unreasonable are supported by substantial evidence. 121

# In the Supreme Court of the United States

OCTOBER TERM, 1943

No. 34

FEDERAL POWER COMMISSION, CITY OF AKRON AND PENNSYLVANIA PUBLIC UTILITY COMMISSION, PETITIONERS

*v.*

HOPE NATURAL GAS COMPANY

*ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE FOURTH CIRCUIT*

## BRIEF FOR PETITIONERS

### OPINIONS BELOW

The opinion of the Circuit Court of Appeals is officially reported in 134 F. (2d) 287, and may be found at R. IV, 169–207.[1] The opinion of the Federal Power Commission is reported in 44 P. U. R. (N. S.) 1, and may be found at R. I, 1–89.

[1] In the record citations, roman numerals refer to the volume and arabic numerals to the page.

## JURISDICTION

The judgment of the Circuit Court of Appeals was entered on February 16, 1943 (R. IV, 207). The petition for a writ of certiorari was filed on April 6, 1943, and was granted on May 17, 1943. The jurisdiction of this Court is invoked under Section 240 (a) of the Judicial Code as amended by the Act of February 13, 1925 (28 U. S. C. § 347), and Section 19 (b) of the Natural Gas Act (15 U. S C. § 717r).

## STATUTE INVOLVED

The pertinent provisions of the Natural Gas Act (52 Stat. 821; 15 U. S. C. § 717) are set forth in Appendix A, pp. 124–135.

## QUESTIONS PRESENTED

The Federal Power Commission, acting pursuant to the Natural Gas Act, after complaints by the Cities of Cleveland and Akron and the Pennsylvania Public Utility Commission, and after extensive hearings, found that the interstate rates of Hope Natural Gas Company were unreasonable and unlawful and issued an order reducing the Company's future rates by $3,609,857 annually. The Federal Power Commission adopted a "prudent investment" rate base. The circuit court of appeals invoked the "present fair value" theory to set aside the Commission's findings and order. The questions presented are:

1. Whether, for rate-making purposes under the Natural Gas Act, the Commission is author-

ized to use a rate base determined exclusively upon the basis of prudent investment measured by "actual legitimate cost" less depreciation,[2] or whether it must use a rate base which reflects estimates of the extent and effect of post-investment fluctuations in labor and material prices.

2. Whether the Commission must include in "actual legitimate cost" amounts previously and correctly charged to operating expenses, in accordance with industry practice of the time, and determined by the Commission to have been recouped through revenues received from rate payers.

3. Whether the Commission may determine actual existing (accrued) depletion and depreciation and the annual allowance in operating expenses for these factors, upon the basis of "actual legitimate cost," or whether the Commission must base such determinations upon estimates of the "present fair value" of the property.

4. Whether the court below erred in holding that in determining the actual existing (accrued) depletion and depreciation, the Commission failed to take into account "the present condition of the property."

---

[2] "Actual legitimate cost" (which Section 6 (a) of the Natural Gas Act authorizes the Commission to ascertain for natural-gas companies) less existing depreciation has been interpreted by the Commission to be "prudent investment." *Re Canadian River Gas Company*, 43 P. U. R. (N. S.) 205; *Detroit* v. *Panhandle Eastern Pipe Line Co.*, 45 P. U. R. (N. S.) 203; see *Re Chicago District Electric Generating Corp.*, 39 P. U. R. (N. S.) 263.

microcard

5. Whether the "economic-service-life" principle, as applied by the Commission in this case, is a reasonable method of determining the actual existing depletion and depreciation and the annual allowance therefor.

6. Whether the court below erred in holding that $165,963 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941, should have been included in 1940 operating expenses.

7. Whether the rates fixed by the Commission are just and reasonable in the statutory sense and nonconfiscatory in the constitutional sense.

8. Whether the Commission has jurisdiction to determine the *lawful* rates for interstate sales of natural gas at wholesale after the effective date of the Natural Gas Act of 1938 and prior to the issuance of a Commission rate-fixing order.

9. Whether the court below erred in holding that the Commission's "findings as to past rates * * * should be set aside."

## STATEMENT

### THE COMPANY

Hope Natural Gas Company ("Hope"), a wholly owned subsidiary of the Standard Oil Company (New Jersey), is conceded to be a "natural-gas company" within the meaning of the Natural Gas Act (R. III, 19). Hope purchases and produces natural gas in West Virginia, transports it in pipe lines to the West Virginia-Ohio

and West Virginia-Pennsylvania state lines, and there sells it in interstate commerce to its affiliates, East Ohio Gas Company and River Gas Company, for resale to ultimate consumers in Ohio; to its affiliate, Peoples Natural Gas Company, for resale to ultimate consumers in Pennsylvania; and to the nonaffiliated Manufacturers Light and Heat Company and Fayette County Gas Company for resale in Pennsylvania (R. I, 17). About 80% of Hope's total sales are in interstate commerce and 95% of such sales are to its aforementioned affiliates (R. I, 18). About 20% of Hope's total volume of gas is sold in intrastate commerce to local consumers in West Virginia. Hope has been purchasing, producing, transporting, and selling natural gas for more than forty years. Hope's interstate sales in 1940 amounted to about 53,000,000 MCF, and its interstate gross revenues in that year amounted to $19,296,755. (R. I, 51.)

Hope's only outstanding securities since its inception have been in the form of common stock, now having an aggregate par value of approximately $28,000,000. During the four decades of its operations, Hope has paid more than $108,000,000 in dividends, including $11,000,000 in stock dividends. The average annual yield on the average annual amount of Hope's capital stock issued for cash or other assets has exceeded 20%. (R. III, 15.) Hope's balance sheet at the end of 1938 showed a net investment, per books, in the entire

gas plant of approximately $15,500,000;[3] an investment in Government bonds of $11,000,000 and cash and investments of $5,500,000 (R. III, 21-24).

THE STATUTE

The Natural Gas Act, effective June 21, 1938 (the "Act"), requires that all rates or charges by natural-gas companies in connection with the transportation or sale of natural gas subject to the Act be just and reasonable, and declares any rate or charge that is not just and reasonable to be unlawful (Sec. 4 (a)). It provides that the Federal Power Commission, upon complaint of any State, municipality, State commission, or gas distributing company, or upon its own motion, whenever it finds that any rate is unjust or unreasonable, shall determine the rate to be thereafter observed and in force, and shall fix the same by order; and, further, that the Power Commission "may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates" (Sec. 5 (a)). Any State, municipality or State commission may file a complaint with the Power Commission, complaining of anything done or omitted to be done by any natural-gas

[3] Prior to 1938 Hope had transferred $7,500,000 from the depletion and depreciation reserves to earned surplus (R. I, 19, Ex. 61; R. III, 176–179). An adjustment to account for that transfer would reduce the $15,500,000 net investment per books shown as of 1938 to about $8,000,000.

company in contravention of the provisions of the Act (Sec. 13).

Under Section 14 (a) the Power Commission may investigate any matter "to determine whether any person has violated or is about to violate any provision of this Act" and may "make available to State commissions and municipalities, information concerning any such matter". Section 16 authorizes the Power Commission to perform any and all acts it may find necessary or appropriate to carry out the provisions of the Act. And Section 17 (c) requires the Power Commission to make available to the several State commissions "such information and reports as may be of assistance in State regulation of natural-gas companies".

PROCEEDINGS BEFORE THE COMMISSION

In July 1938, the Cities of Cleveland and Akron filed complaints with the Power Commission charging that the rates collected by Hope from East Ohio Gas Company ("East Ohio") were excessive and unreasonable (R. II, 1, 7). In October 1938, the Power Commission, on its own motion, instituted an investigation to determine the reasonableness of all of Hope's interstate rates (R. II, 28). In March 1939, the Pennsylvania Public Utility Commission filed a complaint with the Power Commission, charging that the rates collected by Hope from Peoples Natural Gas Com-

pany, Manufacturers Light and Heat Company, and Fayette County Gas Company were unreasonable (R. II, 18). The City of Cleveland's complaint, as amended and modified, prayed specially for a determination by the Power Commission that Hope's collected rates from East Ohio were unreasonable and therefore unlawful, and for a determination of just and reasonable Hope-East Ohio rates from June 30, 1939, to the date of the Power Commission's decision, requesting such determinations "in the aid of State regulation" and particularly to afford the Public Utilities Commission of Ohio a proper basis for disposition of a fund collected by East Ohio under bond from Cleveland consumers during the period since June 30, 1939 (R. II, 14).[4]

---

[4] The fund represents the difference between East Ohio's previous rates and the lower rates established by ordinance of the City of Cleveland, which East Ohio is collecting pending its appeal from the ordinance to the Public Utilities Commission of Ohio, under §§ 614–644 *et seq.* of the Ohio General Code. See *Public Utilities Comm. of Ohio* v. *United Fuel Gas Co.*, 317 U. S. 456, 463.

Representing that the Ohio Commission's determination of the reasonableness of the retail rate established by the City of Cleveland for sales by East Ohio to Cleveland consumers, for the years in which the fund was accumulated, "was ultimately dependent upon the lawfulness" of Hope's wholesale charge to East Ohio (R. II, 45), the City in its amended complaint of January 6, 1939, had requested the Power Commission to determine the lawful wholesale rates from and after June 21, 1938, to the effective date of its order fixing Hope's rates. In a brief subsequently filed before the Power Commission, the City limited the request to cover rates

In October 1939, the Power Commission consolidated for hearing the three complaint cases and its own investigation of Hope's interstate wholesale rates (R. II, 34). Hearings were held in 1940[3] and 1941, and after briefs were filed, the case was argued orally before the Power Commission sitting *en banc* on October 27, 1941 (R. II, 48). The Commission decided the case on May 26, 1942, when it entered an "Order Reducing Rates" charged by Hope and, in addition, separate "Findings as to Lawfulness of Past Rates" collected by Hope from East Ohio (R. I, 1, 8).

THE COMMISSION'S DETERMINATIONS

The Commission's "Order Reducing Rates" required Hope to reduce its interstate rates for the future to reflect a reduction of not less than $3,609,857 in operating revenues on an annual basis (R. I, 6). More particularly, the order re-

---

charged from and after June 30, 1939, for the reason that a settlement had made the question moot with respect to the earlier period originally covered.

[3] On December 20, 1940, the Power Commission denied without prejudice a motion of the Cities of Cleveland and Akron for an immediate order reducing the Hope-East Ohio rates upon Hope's own testimony, for the reason that "there is insufficient evidence of record, at this time, to support the prayer for relief requested by the movants," and subject to the reservation that "this order is not to be construed as a determination of any of the issues in the pending principal proceedings" (R. II, 43).

quired minimum reductions of 7 cents per MCF from the 36.5¢ and 35.5¢ rates previously charged East Ohio and Peoples Natural Gas Company, respectively, and 3 cents per MCF from the 31.5¢ rate previously charged Fayette County Gas Company and Manufacturers Light and Heat Company (R. I, 73–74). The Commission's "Findings as to Lawfulness of Past Rates", made in deciding the complaint of the City of Cleveland, determined that the rates collected by Hope from East Ohio were unjust, unreasonable, excessive, and therefore unlawful, by $830,892 in 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940; and further determined just and reasonable rates for gas sold to East Ohio for resale for ultimate public consumption to be $11,528,608 for 1939, $11,507,185 for 1940, and $11,910,947 on an annual basis for 1941 and the first half of 1942 (R. I, 12–13).

The Commission founded its "Order Reducing Rates" upon a rate base of $33,712,526, upon which it granted Hope a 6½% rate of return, or $2,191,314 annually (R. I, 4). This rate base was determined to be the actual legitimate cost of Hope's interstate property less existing depletion and depreciation, plus allowances for unoperated acreage, working capital, and future net capital additions (R. I, 50).

The Commission's rate base was arrived at substantially as follows: The Commission found

that Hope had kept complete documentary evidence, through books, records, and vouchers, of its expenditures throughout its existence, so that no estimates were required to ascertain the actual legitimate cost of its property (R. I, 23, 174). Pursuant to a check of the inventory of Hope's property in service, and pursuant to an examination, analysis, and audit of Hope's records, the Commission determined the cost to be $51,937,416 as of December 31, 1940, for the property devoted to interstate sales (R. I, 3, 50). From this amount, the Commission deducted accrued depletion and depreciation, which it found to be $22,328,016 (R. I, 4, 45, 50).[8] It arrived at this figure by applying the "economic-service-life" method to actual legitimate cost (R. I, 41). In making these determinations the Commission was guided by a study conducted by a qualified staff engineer, who made a field inspection of Hope's physical properties to aid in the determination of service lives (R. I, 42; R. III, 158). To the cost, less accrued depletion and appreciation, the Commission then

---

[8] The actual existing depletion and depreciation found by the Commission came to about $24,000,000 *less* than the depletion and depreciation of some $46,000,000 which the Company had accrued on its books (R. I, 81). One of the Commissioners dissented on the ground that the Commission should have deducted from actual legitimate cost, accrued depreciation and depletion of not less than $38,000,000, the reserve remaining on the Company's books after it had transferred $7,500,000 from that reserve to surplus (R. I, 81). See n. 3, p. 6, *supra*.

added $1,392,021 for future net capital additions, $566,105 for useful unoperated acreage, and $2,125,000 for working capital, yielding the total rate base of $33,712,526 (R. I, 50).

Using 1940 as a test year to forecast future revenues, and forecasting expenses at the 1940 figure plus $421,160, the Commission allowed Hope operating expenses and taxes amounting to $13,495,584 (R. I, 5, 65). Of this total $1,460,037 represented the annual allowance for depreciation and depletion (R. I, 53, 65). This allowance was determined by the Commission in the same way as the actual existing depreciation and depletion, by the application of the "economic-service-life" method to the actual legitimate cost of Hope's properties (R. I, 51–52).

The Commission's "Findings as to Lawfulness of Past Rates" were arrived at on the same principles and in substantially the same manner as the "Order Reducing Rates," except that they were based on actual operating experience for the years in question, instead of a test year (R. I, 11).

In issuing its order and findings the Commission rejected Hope's argument that post-investment changes in price levels had to be reflected in the rate base and in computing both accrued depreciation and depletion and the annual allowance in operating expenses for these items (R. I, 20–23, 36, 41, 52). It condemned as hypothetical and without probative value the "reproduction cost new" and "trended original cost" estimates

(amounting to approximately $97,000,000 and $105,000,000, respectively) submitted in evidence by Hope in support of its claimed rate base of some $66,000,000 (R. I, 20–23). The Commission also rejected Hope's contention that, in any event, the rate base should have reflected an additional sum of about $17,000,000, largely representing expenditures for well-drilling prior to 1923 which Hope had charged to operating expenses (R. I, 24–34). Likewise unsuccessful was Hope's argument for adopting the "percent condition" theory of measuring accrued depreciation (R. I, 38).

Pursuant to Section 19 of the Act, Hope filed an application for rehearing (R. II, 51), and upon denial petitioned the United States Circuit Court of Appeals for the Fourth Circuit for a review of the Commission's "Order Reducing Rates" and the Commission's "Findings as to Lawfulness of Past Rates" (R. IV, 3).[7]

DECISION OF THE CIRCUIT COURT OF APPEALS

On review, the court below, with one judge dissenting, set aside the Commission's "Order Reducing Rates" on the basic grounds that: (1) the Commission's use of a prudent investment rate base failed to reflect "present fair value," in view

[7] Hope did not seek a stay of the Commission's order from the Circuit Court of Appeals and such order has not been stayed; instead Hope agreed with its customer companies to charge the ordered rates pending litigation, upon the customers' agreement to make Hope whole if the Commission's order should be finally invalidated.

of the post-investment "decided change" in price levels shown by the record and by judicially noticeable facts (R. IV, 172, 183–184); (2) the Commission erroneously excluded from the rate base the well-drilling costs previously incurred and charged to operating expenses prior to 1923 (R. IV, 172, 184–189); (3) the Commission improperly determined accrued depreciation on the basis of "theoretical formulas," without considering the present physical condition of Hope's property (R. IV, 172, 189–190); (4) the Commission should have based its annual allowance in operating expenses for depreciation and depletion upon the "present fair value" of the physical property, instead of upon actual legitimate cost (R. IV, 194–198); (5) the Commission should have included in 1940 operating expenses $165,963 for an experimental deep-test well, which was completed dry and charged to operating expenses in 1941 (R. IV, 198); (6) the Commission should have made an annual allowance for depreciation and depletion on capital added to the rate base after 1940 (R. IV, 196).

The court below also set aside the Commission's "Findings as to Lawfulness of Past Rates," holding that: (1) the Commission had no jurisdiction to make findings as to lawfulness of past rates "to be given effect in rate proceedings before state commissions," and that rates filed with the Commission under Section 4 (e) of the Act became the

only "lawful" ones which Hope could charge or accept until changed by the Commission; (2) the Commission could investigate "the conditions and rates of the past" as an incident of its power to fix future rates, but that so viewed the findings in question were invalid for the same reasons as its "Order Reducing Rates," and were also objectionable in that they were based on actual experience for the years in question, rather than reasonable estimates of expense based on experience during a prior period (R. IV, 200, 202).[8]

## SUMMARY OF ARGUMENT

### I

In judicial review under the Natural Gas Act the statutory and constitutional standards coalesce. As there is no question here of the adequacy of the Commission's procedure or the existence of evidence to support its basic findings, the question is whether its order, as applied to the facts before it and viewed in its entirety, produces an arbitrary result. *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 586. Thus tested, the order is clearly valid. The prescribed rates are plainly not arbitrary in the light of the financial history of the Company,

[8] On March 8, 1943, the court below granted a motion for the stay of its mandate pending further order, upon the condition that a petition for writ of certiorari be filed with the Supreme Court of the United States within thirty days (R. IV, 209). The petition was filed on April 6, 1943.

which discloses, through the payment of dividends and the accumulation of earned surplus, that it has earned the total investment in the Company nearly seven times over. If the Company's proffered rate base were accepted, its average rate of return during the preceding several years would have been only 3.27 per cent; so modest a rate, without protest, suggests an inflation of the rate base claimed. *Dayton Power & Light Co.* v. *Public Utilities Commission*, 292 U. S. 290, 311, 312; *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151. Moreover, many doubtful items were resolved in favor of the Company, which aggregate over $26,000,000 in terms of the rate base, and more than $600,000 in terms of annual operating expenses; and the rate of return, 6½ per cent, is a generous one. The actual experience of the Company under the prescribed rates provides reassurance that in fact they were liberal.

We turn, nevertheless, to a consideration of the component determinations made by the Commission which were reviewed and set aside by the court below.

## II

The Commission properly used prudent investment to determine the rate base. It found the base to be $33,712,526, calculated to be the actual legitimate cost of gas plant in service less accrued depletion and depreciation plus net capital

additions through 1943, unoperated acreage and working capital.

The statute clearly contemplates that the Commission should give primary if not exclusive emphasis to prudent investment, if constitutionally possible. There is, we submit, no constitutional barrier. The so called rule of *Smyth* v. *Ames*, requiring a fair return on the "present fair value" of the property, is unsound and unworkable. It is based on the eminent domain principle of just compensation for a taking of property, a principle which is inapposite to regulation. Criticism of the doctrine by informed sources has been persistent and weighty. On the basis of long experience, virtually all informed opinion is agreed that effective rate regulation on a fair-value basis is a practical impossibility and that the standard of prudent investment is sound in principle and eminently workable, is just to consumers and to investors, and will attract sufficient capital to secure adequate service.

The view of the court below, that price trends must be taken into account, would introduce in another way the same irrelevancies and uncertainties which have led to the breakdown of the present-fair-value rule. There should be no compulsion upon the Commission to employ formulas of that sort. If price trends are relevant as bearing upon stability of investment, this factor can be taken into account in determining the permitted rate of return.

## III

In determining actual legitimate cost or investment, the Commission correctly refused to include in the rate base $17,000,000 representing largely intangible costs of well drilling properly charged to operating expenses before 1923. The Commission found that it was the accepted practice at the time for the industry to charge well-drilling expenditures to expense, that Hope deliberately and correctly accounted for such items as operating expenses, and that well-drilling expenditures had been contemporaneously recovered through revenues from the rate payers. In accordance with the overwhelming weight of authority, the Commission, although it was willing to and did correct genuine accounting errors, refused to include in the investment base the amounts previously and properly charged to operating expenses. To have included such amounts would have taken multiple exactions from the rate payers by compelling them to pay a return and an annual allowance for depreciation on the money they had already paid to the utility. The utility has no existing capital investment in the well-drilling costs for which the rate payers have reimbursed the Company, and is not entitled to a return on capital invested by its rate payers.

## IV

The Commission properly used the economic-service-life principle in determining accrued de-

preciation. This principle embodies a consideration of the present physical condition of the property as well as a consideration of the functional causes of depreciation. By returning the full original investment, the method used is fair to the utility, investors, and consumers. The Commission's practice is one which has been analyzed and approved by this Court. *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 167, 168. The method has likewise been approved by the Interstate Commerce Commission, the Bureau of Internal Revenue, and most utility commissions. Moreover, the amount deducted by the Commission for accrued depletion and depreciation was about $24,000,000 less than the amount which the Company had accrued on its books for depletion and depreciation.

## V

The Commission properly used prudent investment as a base in determining the annual allowance for depreciation and depletion. The rates of depreciation and depletion were based on the economic-service-life principle and were thus correlated with the accrued depreciation and depletion. The rates were applied to the actual cost of the property. Under the decision of this Court in the *Natural Gas Pipeline* case, *supra*, a wasting asset business of limited life, such as the enterprise here involved, is in no event constitutionally entitled to no more than a return of its

actual legitimate cost of plant at the end of the economic life of the property. Any additional return would require the rate-payers to contribute to the capital of the company. See *Lindheimer* v. *Illinois Bell Telephone Co., supra,* at 169. The method applied by the Commission is that universally recommended and followed by business enterprises, economists, accountants, and state and regulatory agencies.

## VI

Hope was not harmed by the exclusion from the operating expenses for 1940 of an experimental deep-test well completed in 1941, since the future allowance for that purpose was more than large enough to absorb any possible errors in accounting for the test year.

## VII

In aid of state regulation the Commission exercised its broad investigatory and fact-finding powers to determine the extent to which Hope's interstate wholesale rates were unjust and unreasonable and therefore unlawful for the years 1939, 1940, 1941 and the first half of 1942. It is doubtful that these findings are here reviewable. See *United States* v. *Los Angeles & S. L. R. Co.,* 273 U. S. 299, 309, 310. There was, however, authority to make the findings despite the lack of reparation power. Cf. *Atlantic Coast Line* v. *Florida,* 295 U. S. 301. Resort to such authority

promotes the Congressional purpose of an efficient and harmonious dual system of rate regulation. *Public Utilities Comm. of Ohio* v. *United Fuel Gas Co.*, 317 U. S. 456, 467. The findings, like the order prescribing future rates, are supported by evidence.

## ARGUMENT

### I

### VIEWED IN ITS ENTIRETY, THE COMMISSION'S ORDER PRESCRIBING RATES COMPLIES WITH THE STATUTORY REQUIREMENTS AND IS NOT CONFISCATORY

#### A. SCOPE OF JUDICIAL REVIEW

The Natural Gas Act and the decisions of this Court prescribe the division of functions between the Commission and the courts reviewing its rate orders. Section 19 (b) of the Act, conferring jurisdiction upon the circuit courts of appeals to review orders of the Commission, accords finality to the Commission's findings "as to the facts, if supported by substantial evidence." This fits within the general pattern of recent Congressional policy, revealed in other statutes, to entrust specialized agencies with the functions of appraising conflicting evidence, measuring the weight and credibility of testimony, and finding the facts. *Opp Cotton Mills, Inc.* v. *Administrator*, 312 U. S. 126, 154; *N. L. R. B.* v. *Link-Belt Co.*, 311 U. S. 584, 597; *Rochester Tel. Corp.* v. *United States*, 307 U. S. 125, 146; *Federal Trade Commission* v.

*Algoma Co.*, 291 U. S. 67, 73. In this aspect, the judicial inquiry on review of the Commission's order is limited to whether a fair hearing was afforded the Company and whether there is substantial evidence to support the Commission's findings of fact. *St. Joseph Stock Yards Co.* v. *United States*, 298 U. S. 38, 51; *Interstate Commerce Commission* v. *Louisville & Nashville R. R.*, 227 U. S. 88, 91; *Virginia Ry. Co.* v. *United States*, 272 U. S. 658, 663; *Tagg Bros. & Moorhead* v. *United States*, 280 U. S. 420, 444; *Florida* v. *United States*, 292 U. S. 1, 12.

No question was raised below as to the finality of the Commission's factual findings, or as to the meeting of all procedural requirements. The court below did not hold that any of the Commission's findings, whether basic or ultimate, were not supported by substantial evidence; the record in fact contains substantial evidence to support each basic and ultimate finding made by the Commission.[8a] The court below likewise did not hold that Hope was denied a fair hearing; and here again the record clearly establishes the contrary. The Commission's order of October 3, 1939, fixing the date of the hearing, set forth all the issues involved and, pursuant to the Commission's rules

[8a] For example, original cost: R. I, 225–341; R. III, 25–81. Depreciation: R. I, 373–390; R. III, 25–81, 175–201. Rate of return: R. III, 224–365, 397–489. Working capital: R. III, 211–224. Income, allocation of costs of service: R. III, 224–365.

of practice, prescribed the procedure for Hope "to open and close these proceedings with the presentation of its evidence"[9] (R. II, 34–36). At the hearing, Hope was afforded and availed itself of full opportunity to present its evidence, to cross-examine witnesses, to test, explain or rebut evidentiary facts, to present briefs and oral argument, and otherwise to be heard on all the issues involved.[10]

Apart from the questions of procedural requirements and factual sufficiency, there remain solely the issues of whether the rates prescribed by the Commission are "just and reasonable" under the Act, and whether they violate any constitutional precepts of fairness. Rate-making orders must face in the courts the scrutiny to which administrative and regulatory orders of Government agencies in other fields are subjected (cf. *Gray* v. *Pow-*

---

[9] Sec. 50.63 of the Commission's Provisional Rules of Practice and Regulations under the Natural Gas Act.

[10] There were forty-three days of hearing, at which a comprehensive record of more than 14,000 pages of exhibits and testimony was produced and during which Hope presented its case-in-chief, cross-examined Commission witnesses, and presented rebuttal and surrebuttal testimony. Main and reply briefs were filed by Hope and by the other parties to the proceedings: these briefs included requested findings in great detail, both basic and ultimate, relating to all subjects involved in the proceedings. Oral argument was presented by Hope's counsel to all five members of the Commission on October 27, 1941. After the Commission issued its opinion and order fixing rates, Hope filed an extensive petition for rehearing and stay of the order.

*ell*, 314 U. S. 402; *South Chicago Coal & Dock Co.* v. *Bassett*, 309 U. S. 251), but there is no reason to require that they run any more formidable gauntlet.[1] In this aspect—the statutory and constitutional standards being substantially the same—the true test is whether "the limits of due process" have clearly been overstepped, and whether "the Commission's order, as applied to the facts before it and viewed in its entirety," produces an arbitrary result. *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 586. But in condemning the rates prescribed by the Commission, the court below did not view the Commission's order "in its entirety" in order to determine whether it produced unreasonable or confiscatory results. The court rather concerned itself with particular determinations of the Commission, contrary to the repeated pronouncements of this Court that the result of the rate fixed, not the method employed, is determinative (*West Ohio Gas Co.* v. *Public Utilities Commission*, 294 U. S. 63, 70; *Railroad Commission* v. *Pacific Gas & Electric Co.*, 302 U. S. 388, 394), and that the courts may not interfere unless the complaining party clearly establishes that the pre-

[1] See Black, Douglas, and Murphy, J. J., concurring in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 608; Frankfurter, J., concurring in *Driscoll* v. *Edison Light & Power Co.*, 307 U. S. 104, 122; Brandeis, J., concurring in *St. Joseph Stock Yards Co.* v. *United States*, 298 U. S. 38, 78–82.

scribed rates are confiscatory. *Los Angeles Gas Co.* v. *Railroad Commission*, 289 U. S. 287, 305; *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 169; *Dayton Power & Light Co.* v. *Public Utilities Commission*, 292 U. S. 290, 298; *St. Joseph Stock Yards Co.* v. *United States*, 298 U. S. 38, 53.

B. VIEWED IN THEIR ENTIRETY, THE COMMISSION'S PRESCRIBED RATES ARE PLAINLY NOT ARBITRARY

As shown hereinafter (pp. 33–49, 70–109), the Commission's rate order adequately meets even the supererogatory criteria adopted below. It is even clearer, however, that the Commission's results, when viewed in their entirety, meet every test of reasonableness and fall far short of confiscation.

1. *Hope's financial history*

The total rate reductions ordered by the Commission amounted to a decrease of about $3,600,000 in annual operating revenues (R. I, 6). The impact of this reduction upon Hope must be appraised against the background of the Company's financial history. From the time of its incorporation in 1898 through 1940, Hope's total issue of capital stock for cash or property has been about $17,000,000 (R. III, 7). On this investment, Hope has paid dividends of over $108,000,000 and has accumulated an earned surplus of over $8,000,000—thus earning its total investment in the Company

nearly seven times over.[12] During its entire business life, down to 1940, Hope has earned an average of more than 20% per year on the average annual amount of its capital stock issued for cash and other assets (R. III, 7, 15, 17).[13] After recouping all expenses, its overall net operating income or profit has exceeded $86,000,000 (R. III, 17, Sched. 4).

2. *Actual experience under prescribed rates*

A sound test to measure a complaint that rates are confiscatory is the actual financial experience of the public utility thereunder. *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 163; cf. *Louisville* v. *Cumberland Tel. & Tel. Co.*, 225 U. S. 430, 433, 436; *Knoxville* v. *Knoxville Water Co.*, 212 U. S. 1, 16, 18; *Lincoln Gas Co.* v. *Lincoln*, 250 U. S. 256, 262, 268; *Brush Electric Co.* v. *Galveston*, 262 U. S. 443, 446. Even against the backdrop of its very profitable history, the actual experience of the Company under

[12] The precise figures are (R. III, 7, 15, 17):

| | |
|---|---|
| Capital stock issued for cash | $15,600,000 |
| Capital stock issued for property | 1,369,300 |
| Total | 16,969,300 |
| Dividends paid in cash | 97,273,640 |
| Dividends paid in capital stock | 11,000,000 |
| Total | 108,273,640 |
| Earned surplus accumulated | 8,159,170 |

[13] On an average *invested* capital of $23,198,278, Hope has earned an average of $2,772,210 annually (R. III, 15), or about 12% per year.

the lower rates prescribed by the Commission, since July 15, 1942, when they became effective, answers any claim of confiscation.[14]

The Commission allowed Hope a 6½% rate of return on investment. During 1939, 1940 and 1941, the Company paid dividends of 10% on its common stock (R. III, 14); and in the year 1942, during about half of which the lower rates were in effect, it still found it possible to pay dividends of 7½%. During the three years 1940–1942, Hope's earned surplus increased by $8,500,000, to a total of almost $14,000,000, an increase sufficient to pay a 50% dividend on all outstanding capital stock (Appendix B, Table 4). The liquidity and affluence of the Company may be gathered from the fact that at the end of 1942, its financial position per books showed nearly as great an investment represented by cash and Government bonds as by net utility plant in service. (Appendix B, Table 4.)

In fixing the rates for the future, the Commission employed the Company's 1940 level of gas sales and revenues (R. I, 51, 70). But during the four years 1939–1942, Hope's interstate gas sales

---

[14] The results of the Company's operations for 1941 and 1942 are not in the record but have been made available by the Company to the Commission in sworn statement form. They appear in Appendix B, pp. 136–140, *infra*. At the oral argument we shall move for leave to have this material included in the record.

and revenues showed a considerable increase (Appendix B, Tables 1 and 2):

| Year | Interstate gas sales, MCF | Interstate gas revenues |
|---|---|---|
| 1939 | 41,350,589 | $14,866,894 |
| 1940 | 53,604,243 | 19,296,755 |
| 1941 | 63,685,009 | 22,835,340 |
| 1942 | 69,960,811 | 25,229,783 |

The additional 16,000,000 MCF of gas sold in 1942 as compared with 1940 would, at the old rates, have correspondingly increased Hope's gas revenues more than $6,000,000 (Appendix B, Tables 1 and 2). Had the Commission used the 1942 level, which was not accompanied by a corresponding increase in operating expenses, the Commission would have been justified in making an additional substantial reduction in Hope's rates. For the prescribed rates, based upon 1940 operations and limited to a 6½% rate of return, would have resulted in a reduction of $4,757,452 in Hope's 1942 revenues, had they been in effect for the entire year; whereas if the rates had been based upon 1942 operations and likewise limited to a 6½% rate of return, the reduction in 1942 revenues would have been $5,849,242. Therefore, even under the prescribed rate reduction, Hope is earning $1,091,790 annually in excess of a 6½% rate of return, if the 1942 level is taken as the criterion (Appendix B, Tables 1, 1-A and 5). This excess of $1,000,000 is equiv-

alent to a 6½% return on a $16,800,000 investment, which is equivalent to adding this amount of investment to the rate base for the year 1942.

*3. The rate base sought by Hope does not square with its financial history*

How wide of the mark falls Hope's complaint of confiscation may be gathered by equating its average rate of earnings against the rate base to which it claims to be entitled. The Commission allowed a rate base of $33,712,526 (R. I, 50). Hope sought a base of some $66,000,000 (R. I, 20–23), founded upon estimates of "reproduction cost new" amounting to about $97,000,000, and estimates of "trended original cost" amounting to about $105,000,000, alleged to be evidence of present "fair value." These estimates were obviously too conjectural and illusory (R. IV, 180) to support a finding of confiscation as a result of their rejection in favor of the recorded and accurate cost figures. *Los Angeles Gas Co.* v. *Railroad Commission*, 289 U. S. 287, 319; *Railroad Commission* v. *Pacific Gas & Electric Co.*, 302 U. S. 388, 397. But apart from their unreliability, if Hope's estimates are accepted, Hope's average rate of return for the four-year period from 1937-1940 would amount to only 3.27% (R. I, 481). "So modest a rate suggests an inflation of the base on which the rate has been computed" for "men do not transact business without protest at confiscatory rates." *Dayton Power & Light Co.* v.

*Public Utilities Commission*, 292 U. S. 290, 311–312. Not only has Hope never seen fit to apply for leave to increase its rates pursuant to Section 5 (a) of the Act, but its gas plant has been well maintained and operated and during this period it has received an annual average return of about 9% on the average investment (R. III, 13–17; 21–24). Such a financial history completely disposes of any contention that during the years 1937–1940 Hope was not receiving an adequate return. Cf. *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151.

4. *Doubtful items of substantial amount were resolved by the Commission in Hope's favor*

The reduction in rates ordered by the Commission, amounting to about $3,600,000 annually, was reached after the allowance of substantial items in the rate base and in operating costs which the Commission might well have excluded. The resolution of these doubts in Hope's favor by the Commission, resulting in an increase in the rate base of perhaps $26,000,000 and an increase in allowed operating costs of some $600,000, renders well-nigh impossible any clear or convincing showing that the prescribed rates are confiscatory. Cf. *Lindheimer* v. *Illinois Telephone Co.*, 292 U. S. 151, 175. These are some of the more important instances in which doubts were resolved in favor of Hope and liberal allowances made to it as a consequence:

1. Items totalling almost $26,000,000 were included in the rate base although strong arguments were presented for their exclusion, to wit:

(a) The Commission included in the rate base $1,295,953 representing plant costs in 1918–1923, which were first capitalized by Hope and then arbitrarily charged off to operating expenses (R. I, 35). Since the Company had already recouped that amount from the revenues paid by rate payers during the years for which those items were included in operating expenses, the Commission would have been justified on purely equitable considerations in excluding that total from the rate base.

(b) The Commission (one member dissenting) deducted from actual original cost only $22,328,016 for accrued depletion and depreciation. This was about $24,000,000 less than the amount which Hope had already accrued on its books for depletion and depreciation (R. I, 50, 80–89; R. III, 175–176). Hope could hardly have been heard to complain if the Commission had accepted the Company's own figures, as Commissioner Scott urged; yet the lesser sum was deducted, giving a correspondingly larger rate base.

(c) The Commission included in the rate base Hope's entire gas acreage costing $566,105, notwithstanding that some of it is not being presently used in the Company's business and therefore might well be rejected as a base for a return to the Company (R. I, 47–48).

(d) As the court below noted, the Commission included in the rate base $277,820 more for working capital than Hope's corrected claim totalled for that item (R. IV, 193–194).

2. Doubtful items totalling more than $600,000 were added to annual operating expenses and thus reflected in the prescribed rates, to wit:

(a) The Commission allowed, on a cost basis, $1,460,037 in annual operating expenses for annual depletion and depreciation. This allowance is greater by some $120,000 than that which Hope's claimed annual rates for depreciation would have produced (R. I, 52–53; R. III, 207–209).

(b) At the Company's request, $138,018 for administrative and general expenses was allowed in operating expenses for 1940, although such amount was formerly capitalized by election of the management (R. I, 49–50).

(c) The Commission added $421,160 to the 1940 figures for operating expenses, which already exceeded 1939 operating expenses by $2,300,000 (R. I, 62). This included an allowance for increased West Virginia property taxes, even though the Company had represented to the Commission that, as a result of the ordered rate reduction, it expects to save $338,000 annually in West Virginia property taxes (Hope's Reply Brief before the Federal Power Commission, p. 52).

3. The Commission allowed Hope a return of 6½% upon its rate base (R. I, 4). This is to be contrasted with the 5½% return allowed by the

Commission to electric utilities (*Chicago District Electric Gen. Co.*, 2 F. P. C. Rep. 412 (1941)), and the even lower rate of 5% allowed by the Illinois State Commission—a rate which in itself raises no substantial Federal question. *Peoples Gas Light & Coke Co. v. Slattery*, 373 Ill. 31, 25 N. E. (2d) 482, appeal dismissed, 309 U. S. 634. See also *Knoxville v. Knoxville Water Co.*, 212 U. S. 1, 17.

In the acoustics of such liberality, the cries of confiscation ring hollow indeed.

---

The court below rejected the Commission's order prescribing rates because of what it regarded as a failure to observe certain required formulae in computing the rate base and the annual operating expenses. Even if the court was qualified to consider separately, each item going into rate base and operating expenses, and the methods and theories of computation utilized by the Commission, we believe the objections to the Commission's order were unfounded.

These objections, which will be treated under Points II through VI of this brief, are directed to the use of a prudent investment rate base (Point II), the exclusion therefrom of certain well-drilling expenses (Point III), the determination of the accrued depreciation and depletion (Point IV), the annual allowance for such items (Point V), and the exclusion from 1940 operating expenses of expenditures for an experimental well (Point VI).

## II

### THE COMMISSION MAY PROPERLY USE A "PRUDENT INVESTMENT" RATE BASE

Chief among the court's objections to the Commission's order was the use of Hope's "prudent investment" in its interstate plant to compute the rate base. Since Hope had kept complete documentary evidence of its expenditures throughout its entire existence, the Commission found that this was the best evidence of the actual legitimate cost of Hope's plant, so that no estimates were needed (R. I, 23, 174). Upon the basis of Hope's own records, and after a check of the inventory of Hope's property in service, the Commission determined the cost of Hope's facilities devoted to interstate commerce, as of December 31, 1940, to be $51,957,416 (R. I, 3, 50). After deducting therefrom accrued depletion and depreciation, and adding thereto certain items for working capital, future capital additions and useful acreage, the Commission obtained a total rate base of $33,712,526 (R. I, 45, 50). Hope, on the other hand, claimed a rate base of some $66,000,000, and to support it offered evidence of "present fair value," consisting of estimates of "reproduction-cost-new" of Hope's plant, amounting to about $97,000,000, and estimates of "trended-original-cost" of the plant amounting to about $105,000,000. These estimates the Commission admitted in evidence and analyzed. However, it discarded them

as not being predicated upon facts and as too hypothetical, conjectural, and illusory to be accorded probative value in the proceedings (R. I, 20–22). The Commission also rejected Hope's argument that post-investment changes in price levels had to be reflected in the rate base (R. I, 20–23, 36, 41, 52). It accordingly adopted as the rate base the actual legitimate cost (depreciated) of the Company's facilities used in interstate commerce (R. I, 20–21, 36–50).[15]

The court below agreed with the Commission that Hope's estimates of "reproduction-cost-new" and "trended-original-cost" were too conjectural and illusory to be given any weight in determining the rate base (R. IV, 180). It nevertheless ruled that the prescribed rates were both confiscatory in the constitutional sense and unjust and unreasonable in the statutory sense,[16] for failure to reflect, as required by the rule of *Smyth* v. *Ames*, 169 U. S. 466, the increase in the present fair value of Hope's property since it had been installed, caused by the decided rise in the price level which the court discerned in Hope's estimates and of which it took judicial notice (R. IV, 180).

---

[15] By stipulation, Hope's distribution property and property used to transport coke-oven gas were excluded from the proceeding (R. I, 18).

[16] The lower court recognized, in accordance with *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 586, that the statutory standard of "just and reasonable" (Section 5 (a)) coincided with the constitutional test of confiscation (R. IV, 175).

In so holding, the court below disregarded the clear intent of Congress that the Commission should, subject to constitutional limitations, use prudent investment in determining the rate base. It likewise disregarded the recent decision of this Court in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, indicating that a rate base so determined is not *ipso facto* unconstitutional. Moreover, the court below imposed upon the Commission, without warrant in law, an obligation to find a "present fair value" of Hope's interstate properties on the basis of price trends.

A. THE NATURAL GAS ACT CONTEMPLATES USE OF PRUDENT INVESTMENT IN DETERMINING RATE BASE, SUBJECT TO CONSTITUTIONAL LIMITATIONS

The Natural Gas Act requires that interstate gas rates shall be "just and reasonable" (Sec. 4 (a)), and empowers the Commission to prescribe "just and reasonable" rates for the future and to order a decrease where existing rates "are not the lowest reasonable rates." (Sec. 5 (a)). The only formulae laid down by Congress to guide the Commission in exercising its rate-making powers, are those contained in Section 6.

> SEC. 6. (a) The Commission may investigate and ascertain the *actual legitimate cost* of the property of every natural-gas company, the depreciation therein, *and, when found necessary for rate-making purposes,* other facts which bear on the determination

of such cost or depreciation and *the fair value of such property.*

(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the *original cost* thereof, and shall keep the Commission informed regarding the *cost* of all additions, betterments, extensions, and new construction. [Italics supplied.]

The emphasis upon actual and original cost, and the absence of any mention of "present fair value," lead to an inference that Congress intended the Commission to put primary if not exclusive reliance upon prudent investment. This inference becomes a definite indication of Congressional intention when considered with the House and Senate Committee reports on the bill which became the Natural Gas Act. These reports, in making a sectional analysis of the bill, refer only to original cost and not to "fair value" (H. Rep. No. 709, 75th Cong., 1st Sess., p. 5; S. Rep. No. 1162, 75th Cong., 1st Sess., p. 4).

That Congress desired the Commission to base rate making on prudent investment to the extent the Constitution permitted, is further to be gathered from a statute in *pari materia* with the Act here involved, and entrusted to the administration of the same agency: the Federal Power Act, enacted as Title II of the Public Utility Act of 1935. As originally introduced in the Sen-

ate, Section 208 of S. 2796 (which became the Federal Power Act), whose language is identical with that of Section 6 of the Natural Gas Act, specifically placed rate regulation on the prudent investment basis. S. 2796, 74th Cong., 1st Sess. The Senate Committee on Interstate Commerce in favorably reporting the bill, approved such a rate-making basis (S. Rep. No. 621, 74th Cong., 1st Sess., at p. 52):

> Rate regulation must eventually be based on prudent investment. Recent decisions of the Supreme Court * * * afford grounds for the hope that this rule which the Committee considers essential to effective rate regulation will be sustained if the Congress should now definitely adopt it as a legislative policy.

An amendment offered by Senator Bailey, requiring the use of "fair value" as the rate base was not accepted (79 Cong. Rec. 8858), and on June 11, 1935, the Senate passed S. 2796, providing in Section 208 (c) that in determining just and reasonable rates, the Commission shall fix a rate base "not in excess of the actual legitimate cost of the property." 79 Cong. Rec. 9065; see also S. Rep. No. 621, 74th Cong., 1st Sess., p. 20.

However, on June 3, 1935, this Court had reaffirmed the doctrine of *Smyth* v. *Ames* in *West* v. *Chesapeake & Potomac Tel. Co.*, 295 U. S. 662. The House Committee apparently read the *West* decision as casting doubt on the constitutionality of

adopting prudent investment as the exclusive rate base, for in considering S. 2796, it deleted Section 208 (c) and inserted Section 208 (a), authorizing the Commission to ascertain actual legitimate cost, with the further authorization to ascertain "fair value," "when necessary for rate-making purposes." H. Rep. No. 1318, 74th Cong., 1st Sess., p. 30.

This legislative material leads to the conclusion that while Congress did not bind the Commission to the use of any single formula in determining the rate base (*Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575), it did intend the Commission to use prudent investment, and to consider "fair value" only if constitutionally necessary. Independent legal opinion, exemplified in the 1940 report of the Special Committee of the Public Utility Law Section of the American Bar Association, concurs in this view.[18]

---

[18] The Committee, analyzing Section 208 of the Power Act and the companion Section 6 of the Gas Act, stated (1940 Report, pp. 14–15):

"It will be noted that the primary duty of the Commission under these two provisions is to ascertain the cost of the property and the depreciation therein and that 'other facts which bear on the determination of such cost or depreciation, and fair value of such property' are to be determined only 'when found necessary for rate-making purposes.' There is here the possible inference that the Congress, when it drafted this provision, was hopeful that the courts would decide that nothing other than the 'actual legitimate cost' of the property would be 'found necessary for rate-making purposes.' However that may be, it is patent that an accounting or cost rate base was dominant in the Congressional mind, and that these

B. THERE IS NO CONSTITUTIONAL PROHIBITION AGAINST THE DETERMINATION OF A RATE BASE SOLELY ON PRUDENT INVESTMENT

This Court, in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, had before it the propriety of a base selected by the Commission under the Natural Gas Act for the determination of an annual amortization allowance chargeable to operating expenses. This Court ruled that the owner of a "wasting-asset business of limited life" such as the company there involved, has no constitutional right to a return of more than its original investment, even though the reproduction cost of the company's property during the period in question is greater than the original cost. The reason assigned for the validity of disregarding the appreciation in the value of the plant was that "this theoretical accretion to value represents no profit to the owner, since the property dedicated to the business, save for its salvage value, is destined for the scrap-heap when the business ends" (315 U. S. at 593). While this issue did not involve the determination of a rate base on which the owner is entitled to a return, the applicable principles would seem to be the same as where a base for annual amortization allowance is in question. For if the owner of a "wasting-asset business of limited life"

---

very recent statutes in that respect are the very antithesis of some of the older state statutes which prescribe the reproduction cost new less depreciation formula."

does not have a constitutional right to recover more than his original investment, he can scarcely be entitled to an annual fair return upon more than such investment. The "theoretical accretion" to the original investment, which under the decision of this Court need not be returned to the owner in the form of annual amortization allowances, by parity of reasoning need not be recognized as a basis for an annual return in the form of earnings. Any line of distinction between these propositions would produce the anomaly of a requirement that an owner receive an annual return *upon* the accretion without being entitled to a return *of* the accretion itself—the fabrication of a constitutional right to receive piecemeal during the life of a business that which the owner is not entitled to receive in one lump sum at the expiration of its life. The determination of an amortization base is no more integral in the rate making process than the determination of a rate base (cf. *Lindheimer v. Illinois Bell Telephone Co.*, 292 U. S. 151, 164). If the Commission is authorized to use actual legitimate cost for the former purpose as this Court held in the *Pipeline* case, it must be equally authorized to use it for the latter purpose.

Even if the decision of this Court in the *Pipeline* case be deemed limited to "wasting asset businesses of limited life," its applicability to the instant case would be clear. As will be shown more fully hereinafter (pp. 102–103), companies such as Hope, engaged in the extraction and sale of

natural gas, are in a real sense "wasting asset businesses of limited life"; for according to accepted scientific principles, the wells and pools from which the gas is being withdrawn will inevitably be exhausted within a predictable future.

While this Court in the *Pipeline* case did not explicitly denounce the so-called rule of *Smyth* v. *Ames*, which requires that reproduction cost be considered in determining a rate base, we suggest that the decision in effect leaves the Commission free to reject conjectural estimates of reproduction cost and to adopt prudent investment as the rate base.[16]

C. THE COURT BELOW ERRED IN REQUIRING THAT PRICE TRENDS BE UTILIZED IN DETERMINING THE RATE BASE

In support of its claim to a $66,000,000 rate base, Hope sought to prove the "present fair value" of its interstate facilities by offering esti-

[16] This was gathered from the opinion of the majority not only by the three Justices concurring in a separate opinion (315 U. S. 575, 606), but also by the Public Utility Law Section of the American Bar Association (1942 Report, pp. 121–122) and the Committee on Progress in the Regulation of Public Utilities of the National Association of Railroad and Utilities Commissioners (Proceedings of 54th Annual Convention (1942) pp. 223–227). See also *Implications of the Case of F. P. C.* v. *Natural Gas Pipeline Co.*, Public Utilities Fortnightly, October 22, 1942, pp. 604–618.

The dissenting judge below also construed the *Pipeline* case to hold that there was no constitutional objection to the Commission's exclusive use of the prudent investment method; and he concluded that the Commission's order was within the scope of its statutory authority, reasonable, and supported by substantial evidence (R. IV, 203–205).

mates of "reproduction cost new" and "trended original cost" (R. I, 143–208). The Commission received Hope's estimates of "present fair value." However, when analysis revealed such estimates to be erroneous and conjectural, the Commission rejected them in favor of the actual legitimate cost, as reliably shown by Hope's complete books and records (R. I, 20–23). The court below agreed with the Commission as to the unreliability of such estimates, but held that decided price-rises since the original investment, which the court found in the record and judicially noticed, should have been taken into account in the rate base (R. IV, 172, 183–184). In this we submit the court erred, both in its assumption of fact and in its conclusion that price-trends were any more reliable than reproduction-cost estimates.

*1. There is no evidence that present value is greater than original cost*

In setting aside the Commission's rate order because it disregarded post-investment price rises, the court apparently assumed that the original cost of Hope's properties was substantially lower than their present value. There is little to support such an assumption. Although Hope has been in existence over forty years, it has been adding to its property gradually during all that time. The opinion below appears to assume that Hope acquired most of its property during periods of low prices. The facts belie this assumption. Ac-

cording to Hope's Exhibit 20 (R. I, 207, col. 2), only $25,000,000 of a claimed original cost of $70,000,000 was installed prior to 1917, and the rest ($45,000,000) was installed thereafter, when prices were rising. Included in these figures are the intangible costs of well-drilling originally charged to operating expenses, most of which were incurred prior to 1917; the exclusion of these costs would reduce substantially the $25,000,000 figure (Exhibit 20, p. 66). Moreover, the property installed during the low-price period has been largely depreciated. Therefore, although the price level has unquestionably risen since Hope first began operations, its substantial capital expenditures during the period of higher prices, coupled with the depreciation of its low-cost equipment, may well give a "present-value" figure not far removed from original cost.

*2. Results obtained by use of price trend factors are illusory and unreliable*

Even on the assumption that the present value of Hope's properties exceeds its original cost, the "price-trends" which the court below held to be a mandatory factor in the rate base are no more reliable than the estimates of fair value which the Commission rejected with the court's approval. The Commission is not aware of any method of "price trending"—whether general or specific—which does not share the inherent qualities of conjecture and illusion found in the cus-

tomary methods of determining "reproduction cost" and "trended original cost," as the court below conceded and as shown in the Supplement to this Brief (pp. 4–26, 42–48).

(a) *Specific* price trend factors may be applied in two ways. The first method is to obtain the quantity of labor or materials of a given class which went into a plant at the time of construction, and then to translate that quantity into present prices by comparing present prices with the original prices. For instance, if hourly cost of labor had by 1940 increased 300% over the cost in 1900, the estimated total cost of labor expended in 1900 in plant which is in service in 1940, would be multiplied by the translator factor of 300.

Where the translator is applied directly to the various elements which go to make up a plant, such as labor, materials and services, unreliable results are inevitable. For example, to use the illustration involving labor, Hope in this case multiplied the estimated labor costs incurred many years ago by a translator factor which recognized present prices of labor, without giving any recognition whatever to the increase in efficiency which has taken place and the consequent greater productivity of the same amount of labor, particularly through the use of modern tools and machines and through the reduction in the work day (R. III, 101–108). Thus, if labor costs of $100,000 went into the plant in 1900, and if the hourly rate of labor is now three times as great,

the original labor costs multiplied by 300%, or $300,000, would be the estimated value of the labor item in 1940, under the trended original cost. This assumes that the old methods of laying pipeline would prevail in 1940 and that the trench for "Big Inch" would today be dug by pick and shovel—assumptions wholly at variance with the facts. Similarly, in the case of gas mains, the old quantity at the old cost is multiplied merely by the translator factor which recognizes present prices, without giving any effect whatsoever to the improvements made in long distance transmission (R. III, 110–119). It is clear, therefore, that no better results would be obtained by the use of index numbers or price trends than have been obtained by reproduction cost studies. As a matter of fact, in many instances the results would be identical.

The other method of applying specific price trend factors involves a comparison of unit costs at the time of construction with "current reproduction" unit costs. To illustrate, if in 1900 a section of pipe cost $5,000 installed, and the estimated cost of reproduction was $7,500 in 1940, a translator of 150 would be applied to the investment figure. It is obvious that use of the unit cost method results automatically in the reproduction cost figure; hence, the translation of original cost into present values by this method suffers from all the infirmities of reproduction cost estimates.

(b) *General* price trends are used to determine the changes in the purchasing power of a dollar, rather than to translate the actual costs of specific facilities into present costs.[17] The use of general price trends to determine a rate base proceeds on the assumption that a dollar invested in Hope in 1900 should retain the same purchasing power in 1940; that is, its value should be maintained at such a level as to buy as much shelter, food, clothing, entertainment, etc., in 1940 as it could purchase in 1900. This method uses general index numbers rather than specific index numbers as the translator, but it possesses all the infirmities notoriously inherent in the reproduction cost method for which it has on occasion been substituted. Cf. *West* v. *Chesapeake & Potomac Tel. Co.*, 295 U. S. 662, 669–670. Moreover, while it is probably true that the index-number method can give just as accurate results as those obtained by use of reproduction cost and in less time, it is subject to additional objections. There are no satisfactory indices with which to value the dollar. No one knows the exact manner in which an investor in 1900 would have desired to spend a dollar, or the manner in which the same or another investor might desire to spend a dollar in 1940. The indices for this purpose are rather crude, and their use has a more logical relation to monetary control than to the valuing of specific

[17] See *West* v. *Chesapeake & Potomac Telephone Co.*, 295 U. S. 662.

public utilities. Moreover, the problem is not so much that of maintaining the purchasing value of the dollar as it is of maintaining the investment at its original amount. Large classes of investors, such as bondholders and preferred stockholders, make their investments under contracts by which they are to receive the principal amount of their investment (or par) and no more, irrespective of fluctuations in the price level. Common stockholders, on the other hand, may be adequately protected by adjusting the rate of return. Finally, the value of the dollar and the value of specific utilities may point in opposite directions, as occurred in the case of street railways in the 1920's. Cf. Brandeis, J., dissenting in *St. Louis & O'Fallon R. Co. v. United States*, 279 U. S. 461, 494–496.

These weaknesses in the use of price trends are magnified by the compulsory force to which the court below held them entitled. But apart from the unreliability of price trends, there is no warrant in law for the imposition of an obligation upon the Commission to utilize them. The Constitution "does not bind rate-making bodies to the service of any single formula or combination of formulas." *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. 575, 586. Yet the view of the majority below would restrict that freedom of choice by imposing the condition that the formula chosen in any case must yield a result

generally equivalent to that which would be obtained from the use of price trends. The *Pipeline* decision forecloses any contention that a rate order founded upon a prudent investment rate base is arbitrary simply because a larger rate base would result from the adoption of a formula reflecting prevailing price levels. Thus, the decision there sustained the use of an amortization base reflecting actual legitimate cost regardless of the fact that another basis of determination, taking into account post-investment fluctuations in price levels, would have yielded a larger sum. The question is not whether the use of price trends is permissible (cf. Stone, J., dissenting in *West* v. *Chesapeake & Potomac Tel. Co.*, 295 U. S. 662, 690) but whether it is mandatory; and this Court in the *Pipeline* case has in our view answered this in the negative.

For these reasons, we submit that the use of price trends was improperly held below to be a necessary factor in rate making.

D. THE RULE OF SMYTH V. AMES SHOULD BE RENOUNCED

We believe that the circumstances discussed above, and the similiarity between Hope's business and that involved in the *Pipeline* case, would warrant reversal of the decision below without further reconsideration of the doctrine of *Smyth* v. *Ames*. But since it is not certain that the vitality of that doctrine is at an end (see, e. g.,

Hale, *Does the Ghost of Smyth* v. *Ames Still Walk?*, 55 Harv. L. Rev. 1116), we respectfully urge this Court, in the interest of clarifying the Commission's functions as well as those of all other rate-making bodies, to place the troublesome phantom in its grave, and thus terminate the unsound and uneconomic dogma which it has evoked.

In offering argument against the "fair value" concept and in favor of the "prudent investment" concept of rate making, we ask the Court's indulgence, realizing that it is well informed on the subject and has on numerous occasions given judicial attention to the matter. Various members of the Court have, upon several occasions, severely criticized the "mischievous formula for fixing utility rates in *Smyth* v. *Ames*". *Driscoll* v. *Edison Light & Power Co.*, 307 U. S. 104, 122 (Frankfurter, J., concurring); *McCart* v. *Indianapolis Water Co.*, 302 U. S. 419, 423 (Black, J., dissenting); *Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 276, 292 (Brandeis, Holmes, J. J., dissenting); *St. Louis & O'Fallon R. Co.* v. *United States*, 279 U. S. 461, 551–552 (Brandeis, Holmes, Stone, J. J., dissenting); *West* v. *Chesapeake & Potomac Tel. Co.* 295 U. S. 662, 680 (Stone, Brandeis, Cardozo, J. J., dissenting). However, we believe that such argument is appropriate because

the conflict between the two concepts presents the major issue in this case."[18]

We have printed in a Supplement to this brief various pertinent materials, including excerpts from the brief filed by the United States as *amicus curiae* in *Driscoll* v. *Edison Light & Power Co.*, No. 509, October Term, 1938, and from the supplement to the Commission's brief in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, Nos. 265 and 268, October Term, 1941. These materials show "the havoc raised by insistence on reproduction cost" as "a matter of historical record," how the rule of *Smyth* v. *Ames* "has seriously impaired the power of rate-regulation," how the "fair value" rule "has proved to be unworkable by reason of the time required to make the valuations, the heavy expense involved, and the unreliability of the results obtained"; and

---

[18] Hope contended below that the general question whether the Commission may use the prudent investment method of rate making is not presented, since neither the Commission nor its staff had so designated the principal item used in determining the rate base. This is little more than a quibble. Since the wisdom of Hope's plant costs and investments has not been questioned, the actual legitimate cost or gross plant investment as determined by the Commission is synonymous with "prudent investment." *Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 U. S. 276, 289 (Brandeis, J., dissenting); *Los Angeles Gas Co.* v. *Railroad Commission*, 289 U. S. 287, 306. The separate opinion of Commissioner Scott clearly demonstrates that the Commission considered actual legitimate cost to be synonymous with prudent investment (R. I. 81).

how "even the investor, on whose behalf the constitutional safeguards have been developed, has received no protection against the rebounds from the inflated stock-market prices that are stimulated by the 'fair value' doctrine." (*Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 605–606.) These materials also show that the prudent investment approach produces a sound and workable rate base; that it curtails the length and expense of rate litigation and regulation; and that it protects the interests of both the consumers and the investors.

Here we shall show, in addition, that the "fair value" rule is based on principles of eminent domain which are irrelevant in rate making; that in rate regulation, as in price fixing, the reasonableness of the regulation should be the guiding principle; and that the allowance of a fair return on the capital prudently invested in the enterprise is reasonable.

While the material contained in pages 53–70 *infra*, is in large measure derived from the discussion in the Government's brief in the *Pipeline* case, we include it here, in somewhat condensed form, since the issue seems to us to be more centrally raised in this case, and its inclusion, in lieu of mere reference thereto, will serve the convenience of the Court and of the several parties in Nos. 34 and 35.

*1. The fair value rule is based on eminent domain concepts*

The rule that a rate is confiscatory unless it enables the utility to earn a fair return on the present fair value of its property is based on the doctrine in the law of eminent domain that "just compensation" must be paid for property "taken" for public use. *West* v. *Chesapeake & Potomac Tel. Co.*, 295 U. S. 662, 671; cf. *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 602, 603.

This is confirmed by the historical development of the fair value rule. While at first protection against abuses in rate regulation was held to lie at the polls, not in the courts (*Munn* v. *Illinois*, 94 U. S. 113, 134), this view was later abandoned and the question of the reasonableness of rates was recognized to be justiciable, unreasonably low rates being held to constitute a deprivation of property without due process of law or a taking of property without just compensation. *Railroad Commission Cases*, 116 U. S. 307, 323, 331; *Georgia Railroad & Banking Co.* v. *Smith*, 128 U. S. 174, 179; *Chicago &c. Ry.* v. *Minnesota*, 134 U. S. 418, 458; *Budd* v. *New York*, 143 U. S. 517, 547. The "fair value" rule emerged shortly thereafter in *Reagan* v. *Farmers' Loan & Trust Co.*, 154 U. S. 362, which invalidated a rate order under which the company could not pay even one-half of its bond interest. The Court there observed *obiter* that the Constitution prohibits a taking of

"the use [of property] for the public benefit at less than its market value," just as it forbids acquisition of title to the property by eminent domain at less than "the value of the property as it stood in the markets of the world" (154 U. S. at 410).[19]

The analogy of a "taking" was not expressly referred to again until the lower court in *Smyth* v. *Ames* held that the earning of "a fair interest on the actual value of the property" of the railroad company is a measure of the reasonableness of rate reductions, just as in condemnation of title to the railroad "the present value of the property, and not the cost" is the proper measure of compensation. *Ames* v. *Union Pacific Ry.*, 64 Fed. 165, 177 (C. C. Neb.).

This text extracted from the law of eminent domain became the basis of the "fair value" rule of *Smyth* v. *Ames*, 169 U. S. 466, for determining the constitutionality of rates. See Henderson, *Railway Valuation and the Courts*, 33 Harv. L. Rev. 902, 906–912; Hale, *Conflicting Judicial Criteria of Utility Rates*, 38 Col. L. Rev. 959, 960–964. The rule is invoked to prevent rate regulation on any basis other than "present fair value"

---

[19] In *Covington & Lexington Turnpike Road Co.* v. *Sandford*, 164 U. S. 578, 596, the Court observed that rates fixed so low as to destroy the value of property for all purposes would be invalid as a deprivation of property without due process of law.

(*cf. West* v. *Chesapeake & Potomac Tel. Co.*, 295 U. S. 662), notwithstanding that when *Smyth* v. *Ames* was decided, original cost probably exceeded the "present fair value" of the utility's property, so that the original effect of the rule was to permit rates to be based on a value less than original cost.

*2. The eminent domain concept of present fair value is inapplicable to rate regulation*

In practice the "present fair value" test makes it impossible to measure the reasonableness of rates by any coherent standard, and renders rate regulation logically impossible.

The practical impossibility of developing a workable rule under the "present fair value" concept arises fundamentally from the fact that eminent domain principles have no proper application in the field of rate regulation. See Hale, *Conflicting Judicial Criteria of Utility Rates*, 38 Col. L. Rev. 959, 963.[20] Even before *Smyth* v. *Ames* was decided, it had already been established in a utility condemnation case that "the value of property, generally speaking, is determined by its productiveness—the profits which its use brings to the owner" (*Monongahela Navigation*

[20] It was precisely this principle of "just compensation" that led Mr. Justice Field in 1877 to dissent in *Munn* v. *Illinois*, 94 U. S. 113, and to deny any power in the States to regulate rates. 94 U. S. at 143.

*Co.* v. *United States,* 148 U. S. 312, 328–329; see *C. C. C. & St. L. Ry.* v. *Backus,* 154 U. S. 439), and that compensation must be paid not only for the physical property but also for the franchise. Earning power under the old rates thus became the test of value in condemnation cases. Hale, *The "Fair Value" Merry-Go-Round,* 33 Ill. L. Rev. 517, 519–520; Hale, *Conflicting Judicial Criteria of Utility Rates,* 38 Col. L. Rev. 959, 964.[21] In a rate case, however, the earning power necessarily depends on the rates to be allowed, which is the very question at issue.

Any physical property has only a scrap value unless it is capable of earning a return sufficient to justify a larger evaluation; consequently, the rate level, whose determination must await computation of "fair value" under *Smyth* v. *Ames,* is itself the prime factor in that value. Cf. *Ecker* v. *Western Pacific R. Corp,* 318 U. S. 448, 483; *Group of Investors* v. *Milwaukee R. Co.,* 318 U. S. 523, 540; *Consolidated Rock Co.* v. *DuBois,* 312 U. S. 510, 525. The value of a going concern in fact depends on earnings under whatever rates may be anticipated. The present fair value rule creates but offers no solution to the dilemma

[21] Of course, where the property of a nonutility without franchise is condemned, it is only the physical property and not the earning power or prospective profits that are taken and paid for. *Mitchell* v. *United States,* 267 U. S. 341; *Joslin Co.* v. *Providence,* 262 U. S. 668; *Bothwell* v. *United States,* 254 U. S. 231.

that value depends upon the rates fixed and the rates upon value. See Brandeis, J., concurring in *Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 U. S. 276, 292; *Federal Power Commission* v. *Natural Gas Pipeline Co., supra*, at 603 (Black, Douglas, Murphy, J. J., concurring); *Los Angeles Gas Co.* v. *Railroad Commission*, 289 U. S. 287, 305; *West* v. *Chesapeake & Potomac Tel. Co.*, 295 U. S. 662, 689 (Stone, J., dissenting); Hale, *The "Fair Value" Merry-Go-Round*, 33 Ill. L. Rev. 517–520; 2 Bonbright, *Valuation of Property*, pp. 1094 et seq.; Henderson, *Railway Valuation and the Courts*, 33 Harv. L. Rev. 1031.

The utter illogicality of invoking eminent domain principles of "just compensation" in rate regulation is best shown by the fact that strict application of those principles would render all rate regulation invalid or impossible. When property is taken under the power of eminent domain, the owner is "entitled to the full money equivalent of the property taken, and thereby to be put in as good position pecuniarily as it would have occupied if its property had not been taken." *United States* v. *New River Collieries Co.*, 262 U. S. 341, 343. Since the value of a public utility depends on earning power, under condemnation principles its present value would have to be measured by its earnings at the existing rates, and would be calculated by capitalizing those earnings at the prevailing rate of return upon investments involv-

ing similar risks. On the rate base thus determined, a fair return would have to be allowed which would, of course, be the rate of return on investments involving similar risks. The result would be no change in rates at all. This absurdity results from the truism that every rate reduction which reduces the net earnings of a utility *ipso facto* reduces the value of that utility; if the value prior to the rate reduction must be preserved for constitutional reasons, it necessarily follows that every rate order which reduces that value is invalid.[22] See Barnes, *The Economics of Public Utility Regulation* (1942), pp. 401–402.

While not in terms abandoning the "taking" theory with its corollary requirements of "just compensation" (see *West* v. *Chesapeake & Potomac Tel. Co.*, 295 U. S. 662, 671), this Court has resolved the dilemma, albeit at the expense of logic, by holding that some rate regulation is

---

[22] The dilemma is not evaded by the contention that the actual market value will be less than the capitalized earnings by reason of the fact that the market will take into account the prospect of future rate regulation. A business has greater value if its owner can anticipate earnings in excess of just and reasonable profits, and the prospect of future regulation does not entirely diminish that anticipation. Hale, *The "Fair Value" Merry-Go-Round*, 33 Ill. L. Rev. 517, 530. If, therefore, under eminent domain principles, market value, which is earning power in the case of a public utility, sets the measure of "just compensation" and if rates must be fixed to pay the utility "just compensation" in the eminent domain sense, rates can never be reduced below the market expectations prior to the rate proceedings, and adequate rate regulation is still impossible.

permissible. In part the Court has permitted the exclusion of value supposedly due to "monopoly" position (*Clark's Ferry Co.* v. *Public Service Commission,* 291 U. S. 227, 238; see Whitten, *Fair Value for Rate Purposes,* 27 Harv. L. Rev. 419, 421–423; Richberg, *A Permanent Basis for Rate Regulation,* 31 Yale L. J. 263, 267), even though an exclusive franchise is an element of value in a condemnation case. *Monongahela Navigation Co.* v. *United States,* 148 U. S. 312, 328–329. In effect "value" became "a word of many meanings" (cf. *Group of Investors* v. *Milwaukee R. Co.,* 318 U. S. 523, 540), so that such factors as good will and earning power, while material to "exchange value" in condemnation cases, were excluded in determining the "special value" for rate purposes. See Brandeis, J., concurring in *Southwestern Bell Telephone Co.* v. *Public Service Commission,* 262 U. S. 276, 310–311.

The very existence of the power to regulate rates, therefore, shows that the concepts of "just compensation" and "fair value", drawn from the law of eminent domain, have no place in rate cases. Bonbright, *op cit. supra,* pp. 1092–1096; Bauer and Gold, *Public Utility Valuation,* p. 147; Beutel, *Valuation as a Requirement of Due Process,* 43 Harv. L. Rev. 1249, 1267; Hale, *The "Fair Value" Merry-Go-Round,* 33 Ill. L. Rev. 517, 519, 530; Hale, *Conflicting Judicial Criteria of Utility Rates,* 38 Col. L. Rev. 959.

*3. Rate regulation should be deemed violative of due process only if arbitrary or unreasonable*

These dilemmas and inconsistencies are avoided if rate regulation is regarded not as a taking of property for public use, but simply as an exercise of regulatory power. There is adequate room for such a distinction. Eminent domain is the power to command a sale; it involves an appropriation of title or of the use of property which is essential to the Government's need and which promotes the public welfare. Lewis, *Eminent Domain* (3d ed. 1909) § 6. The taking is justified not because the property is a public nuisance or other obstacle to valid legislative ends, but because it is needed for some valid public purpose or project. Nichols, *Eminent Domain* (2d ed. 1917), p. 278; Orgel, *Valuation under Eminent Domain* (1936), p. 2; see Gardner, *The Massachusetts Billboard Decision*, 49 Harv. L. Rev. 869, 889–892.

The regulation of rates, on the other hand, promotes the public welfare, not by a "taking," but by regulating and restricting the owner's use and enjoyment of his own property. Lewis, *Eminent Domain* (3d ed. 1909), §§ 246, 249. Congress may of course subject the use of privately owned property to reasonable limitations in order to serve valid legislative ends, even though the regulation diminishes the value of the property. Under "the police power in its proper sense, * * * property rights may be cut down, and to that extent

taken, without pay." *Block* v. *Hirsh*, 256 U. S. 134, 155.

Examples of valid legislative regulations which diminish the value of property without compensation are numerous. A state may prohibit the manufacture of an article or the conducting of a business within certain territorial limits;[23] it may prohibit the emission of smoke from buildings even though this requires the discontinuance of the use of private property and the incurring of considerable expense (*Northwestern Laundry* v. *Des Moines*, 239 U. S. 486); it may limit the use of property and even destroy it outright, in order to save or benefit another class of property "which, in the judgment of the legislature, is of greater value to the public";[24] and it may control prices in appropriate circumstances. *Nebbia* v. *New York*, 291 U. S. 502. Such reasonable restrictions on the use of property in the interest of the public are not "takings" for which just compensation must be paid. *Monongahela Bridge Co.* v. *United States*, 216 U. S. 177, 193; *Union Bridge Co.* v. *United States*, 204 U. S. 364, 388–403; *West Chicago Street Railroad Co.* v. *Chicago*, 201 U. S. 506,

[23] *Powell* v. *Pennsylvania*, 127 U. S. 678 (oleomargarine); *Mugler* v. *Kansas*, 123 U. S. 623, 661 (intoxicating liquors); *Reinman* v. *Little Rock*, 237 U. S. 171 (livery stable); *Hadacheck* v. *Los Angeles*, 239 U. S. 394 (bricks).

[24] *Miller* v. *Schoene*, 276 U. S. 272, 279–280; *Lawton* v. *Steele*, 152 U. S. 133; *cf. Standard Oil Co.* v. *Marysville*, 279 U. S. 582; *Euclid* v. *Ambler Co.*, 272 U. S. 365; *Pennsylvania Coal Co.* v. *Mahon*, 260 U. S. 393.

524; see Gardner, *The Massachusetts Billboard Decision*, 49 Harv. L. Rev. 869, 889–892.

The constitutional criteria applied to price-fixing regulations are of peculiar applicability to rate regulation. "Rate-making is one species of price-fixing. Price-fixing, like other forms of social legislation, may well diminish the value of the property which is regulated. But that is no obstacle to its validity." *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 603 (Black, Douglas, Murphy, J. J., concurring).[25]

The power of the Government to fix prices or rates was formerly explained by saying that the regulated company had "dedicated" its property to the public use, but this has been characterized

---

[25] The "taking" concept has not even a superficial relevance to utility regulation except where the state requires a utility to extend its service (*New York & Queens Gas Co.* v. *McCall*, 245 U. S. 345; *New York ex rel. Woodhaven Gas Light Co.* v. *Public Service Commission*, 269 U. S. 244) or forbids abandonment if the utility continues to do business anywhere within the state. *United Gas Co.* v. *Railroad Commission*, 278 U. S. 300, 308–309. No question of forbidding abandonment or compelling an extension is involved here. Any duty on the part of Hope to continue or extend its service is in effect based upon the community's dependence, for which the utility itself is responsible. *Cf.* Cardozo, J., dissenting in *Interstate Commerce Commission* v. *Oregon-Washington R. Co.*, 288 U. S. 14, 17. The instances are numerous and familiar in which a duty has been founded on dependence or reliance and in which the concepts of eminent domain are manifestly irrelevant. See, e. g., *Moch Co.* v. *Rensselaer Water Co.*, 247 N. Y. 160, 167; *Slater* v. *Illinois Central R. Co.*, 209 Fed. 480 (C. C. M. D. Tenn.); *Siegel* v. *Spear & Co.*, 234 N. Y. 479; *Creeley* v. *Creeley*, 258 Mass. 460, 463.

as "merely another way of saying that if one embarks in a business which public interest demands shall be regulated, he must know regulation will ensue." *Nebbia* v. *New York*, 291 U. S. 502, 534. In reality there is no true "dedication," for the property remains private property. *Minnesota Rate Cases*, 230 U. S. 352, 431–432; *Interstate Commerce Commission* v. *Oregon-Washington R. Co.*, 288 U. S. 14, 40–41.

Utility regulation, and rate fixing in particular, is thus not a "taking" of property for public use but an exercise of the police power in the form of a restriction upon the use or enjoyment of private property. The validity of such regulation does not depend upon impairment of the value of property; impairment of value is frequently the consequence of regulation. The true test of constitutionality under the due process clause in a rate case, as in all regulatory cases, is simply whether the regulation is reasonable. This is the standard in the analogous field of price fixing. This Court, after observing that there was nothing "peculiarly sacrosanct about the price one may charge," has held that "price control, like any other form of regulation, is unconstitutional only if arbitrary, discriminatory, or demonstrably irrelevant to the policy the legislature is free to adopt, and hence an unnecessary and unwarranted interference with individual liberty." *Nebbia* v. *New York*, 291 U. S. 502, at 539.

*4. It is not unreasonable to limit the earnings of a utility to a fair return upon the capital prudently invested*

Measured by the principles governing the validity of regulatory acts of government, and particularly by those relating to price-fixing, the prudent-investment rate base chosen by the Commission easily passes muster.

As this Court held in considering the Natural Gas Act, the Constitution does not bind the Commission "to the service of any single formula or combination of formulas," but leaves it free, within the ambit of its statutory authority, "to make the pragmatic adjustments which may be called for by particular circumstances. Once a fair hearing has been given, proper findings made and other statutory requirements satisfied, the courts cannot intervene in the absence of a clear showing that the limits of due process have been overstepped. If the Commission's order, as applied to the facts before it and viewed in its entirety, produces no arbitrary result, our inquiry is at an end." *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 586.

This decision leaves the regulatory body at liberty to select formulae suggested by sound business practice and producing no arbitrary result. We submit that an acceptable and reasonable formula is the prudent investment standard adopted by the Commission. This point requires little elaboration here. Mr. Justice Brandeis has demonstrated the reasonableness of the investment basis by reference to a wealth of relevant data.

See *Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 U. S. 276, 289. Additional data are supplied in the Supplement to this brief (at pp. 66–89 thereof), in which we show that the prudent investment basis of rate regulation is sound and workable, that it is overwhelmingly supported by the great body of professional opinion, and that many experienced regulatory bodies have adopted and advocated its utilization. The principal advantages of the prudent investment base will merely be briefly recapitulated at this point.

(a) Prudent investment, in contrast to present value, can be determined expeditiously, accurately, and to a degree of exactness that leaves substantially little ground for conflict between the public and private interests. Once a prudent investment rate base has been determined, the redetermination of a rate base thereafter would amount to the relatively simple task of ascertaining net plant additions, an inquiry greatly facilitated by the use of the companies' books of account and its continuing property records. The importance to the public and to investors of the simplification of the administrative problems of regulation that would follow from the adoption of prudent investment as a rate base can hardly be exaggerated.

(b) An investment base is fair and just to the utilities. Practical experience in California, Massachusetts and elsewhere shows that this method has attracted the necessary capital and

has secured adequate service. A basis of rate regulation which maintains the Company's financial integrity and permits it to raise the required capital cannot be deemed arbitrary. See Brandeis, J., concurring in *Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 U. S. 276, 291; Hale, *Conflicting Judicial Criteria of Utility Rates*, 38 Col. L. Rev. 959, 969–970.

(c) The investment base is fair to investors in the utility. The investor's contribution to public service is his capital, and he is treated equitably when he is allowed a compensatory return thereon. Public utilities usually finance a large part of their plant through issuance of bonds and preferred stocks, whose returns are contractual and fixed. Stability of investment and safety of principal are important factors to these investors.

A rate base predicated upon investment is the most stable type and is thus fair to such investors. Even as to common stock, stability of investment is obtained under prudent investment. It is merely necessary to adjust the rate of return to current costs of capital; indeed, such adjustment might well convert common stocks into gilt-edge investments, by protecting them from depreciation in value during time of depression.[26]

---

[26] Under the rule of *Smyth* v. *Ames*, on the other hand, utility investors tend to receive both the benefit of appreciation in property values and protection against depreciation. This is so because in periods of deflation, regulatory agencies cannot undertake to fix values in strict conformity to *Smyth* v. *Ames* without throwing many utilities into receivership,

(d) State and federal regulation of utilities' accounts are giving increased reliability to investment figures. Appendix C to this brief (pp. 141–143 *infra*) lists the state commissions which control the issuance of securities and have prescribed accounting by utilities on an original cost or investment basis. See also *American Tel. & Tel. Co.* v. *United States*, 299 U. S. 232; *Alabama Power Co.* v. *Federal Power Commission*, 128 F. (2d) 280 (App. D. C.), certiorari denied, 317 U. S. 652; *Louisville Gas & Electric Co.* v. *Federal Power Commission*, 129 F. (2d) 126 (C. C. A. 6), certiorari denied, 318 U. S. 761.

The investment basis is the standard accounting practice used by business institutions in reporting their financial transactions to stockholders, banks and other interested parties. Because it combines

---

and this would, of course, deprive consumers of necessary utility service. Bonbright, *Merits of Original Cost and Reproduction Cost*, 41 Harv. L. Rev. 593, 621–622; see Whitten, *Fair Value for Rate Purposes*, 27 Harv. L. Rev. 419, 423–424. "The rule by which the utilities are seeking to measure the return is, in essence, reproduction cost of the utility or prudent investment, whichever is the higher." Brandeis, J., in *Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 U. S. 276, 311. Since, under the practical operation of the *Smyth* v. *Ames* rule, the utilities are not compelled to suffer from a decline in values, it is not unreasonable to deny them the increase. And if some account must be taken of the factor of increasing prices as bearing upon the stability of investment, this may readily be accomplished by altering the rate of return. See Whitten, *Fair Value for Rate Purposes*, 27 Harv. L. Rev. 419, 434–435; Richberg, *A Permanent Basis for Rate Regulation*, 31 Yale L. J. 263, 273.

exactness, ease of application, and equitableness, it is the standard best adapted to modern business conditions and practices in this country.

(e) The prudent investment base is fair to consumers, by assuring them a sound and stable utility whose services will be rendered at the lowest rate consistent with the attraction of necessary capital and with a reasonable return to investors.

(f) The use of the prudent investment basis of rate regulation is the long-established practice of the Federal Power Commission,[27] and in 1940 it reported to Congress that its rate-making policy was to insist upon such a rate base (20th Annual Report of the Federal Power Commission, p. 62). Proof of the reasonableness of the method and its compliance with constitutional requirements is to be found in the fact that the Commission has obtained consent reductions in natural gas rates on this basis, exceeding $9,600,000 annually.[28] Consent reductions would hardly have been forthcoming if rates based on prudent

---

[27] *Re Albany Lighting Co.*, 25 P. U. R. (N. S.) 36, 39; *Re Interstate Power Co.*, 32 P. U. R. (N. S.) 1, 10; *Los Angeles* v. *Nevada-California Electric Corp.*, 32 P. U. R. (N. S.) 193, 206; *Re Chicago District Electric Generating Corp.*, 39 P. U. R. (N. S.) 263; *Re Canadian River Gas Co.*, 43 P. U. R. (N. S.) 205, 224; *Detroit* v. *Panhandle Eastern Pipe Line Co.*, 45 P. U. R. (N. S.) 203; *Re Interstate Natural Gas Company*, 48 P. U. R. (N. S.) 267, 274.

[28] The $3,750,000 interim rate reduction approved in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, was followed by a final consent rate reduction of an additional $2,750,000 and was based on prudent invest-

investment had produced a return which the companies considered to be unreasonable and confiscatory.[28]

The rule of prudent investment thus combines exactness, ease of application, and appropriateness for determining a return fair to the utility, investors and the public. It is the standard for rate making best adapted to modern business conditions and practices in this country. Since it is clearly reasonable and produces no arbitrary result, rate regulation on the basis of prudent investment is entirely consistent with due process, in addition to being well adapted to serve the Congressional objective of producing "just and reasonable" rates. Cf. *Nebbia* v. *New York*, 291

---

ment. F. P. C. Order Accepting Reduced Rates for Filing and Terminating Proceedings, September 19, 1942. Additional reductions on the prudent investment basis were obtained in the following cases: *Re Lone Star Gas Co.*, F. P. C. Docket Nos. G–208, G–209, May 4, 1942, Order Reducing Rates by $2,053,564 annually; *Re El Paso Natural Gas Co.*, F. P. C. Docket Nos. G–424, G–257, October 29, 1942, Order Reducing Rates by $526,000 annually; *Re Northern Natural Gas Co.*, Feb. 4, 1943, Order Making Effective Reductions in Rates by $2,087,000 annually; *Re Louisiana P. S. Comm.* v. *United Gas Pipe Line Co.*, F. P. C. Docket Nos. G–133, G–148, G–157, G–193, April 16, 1943, Order Making Effective Reductions in Rates by $2,195,287 annually.

[28] Under the Federal Power Act (Secs. 20 and 14), the rate base prescribed for licensed hydroelectric projects is the "net investment," which is the equivalent of prudent investment (41 Stat. 1077, 16 U. S. C. § 791). In twenty years, 128 major hydroelectric projects have been constructed at a cost of $740,000,000 (29th Annual Report, F. P. C., p. 15).

U. S. 502, 537–539. There being no constitutional objection to prudent investment on the ground of reasonableness and no statutory restriction upon its use, the Commission should be permitted to adopt that formula. See *American Tel. & Tel. Co. v. United States*, 299 U. S. 232, 244; *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 606 (Black, Douglas, Murphy, J. J., concurring). And to eliminate any doubts as to the propriety of such a rate-making method, we suggest that the so-called rule of *Smyth v. Ames*, as enunciated in the *Southwestern Bell* case, should be renounced.

## III

### THE COMMISSION PROPERLY EXCLUDED FROM ACTUAL LEGITIMATE COST THE INTANGIBLE COSTS OF WELL DRILLING AND OTHER ITEMS PROPERLY CHARGED TO OPERATING EXPENSE PRIOR TO 1923 AND FULLY RECOUPED FROM RATEPAYERS

The Commission found that Hope's actual legitimate cost amounted to $51,957,416 (before depreciation) for the property devoted to interstate sales as of December 31, 1940. The Commission declined to include in that figure an additional sum of about $17,000,000,[30] consisting largely of expenditures by Hope and the com-

[30] This $17,000,000 figure is before depreciation. After depreciation it amounts to about $4,000,000 as the court below noted (R. IV, 184).

panies from which it acquired properties, for labor and drilling equipment used in drilling wells before 1923. These expenditures, until 1923, were charged to operating expenses in accordance with the general practice in the industry.[31] The court below held the Commission's action improper, and ruled that these items must now be capitalized and reflected in the rate base, principally on the ground that they had been "erroneously charged to expense" instead of to capital (R. IV, 186–189). We believe that the ruling below embodies two fundamental errors: (1) the items in question were not in fact "erroneously" charged to expense; and (2) the decisions of this Court, principally *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 590–591, support the Commission's determination against capitalizing items, previously and properly treated as operating expenses and recovered from revenues received from ratepayers.

A. NATURE OF CONTESTED ITEMS

The actual legitimate cost of Hope's interstate properties, as determined by the Commission, was obtained by going to the books and records of the Company, which covered its entire history, and were complete and well kept. All necessary rec-

[31] In 1923, the West Virginia Public Service Commission, pursuant to its jurisdiction over intrastate rates, required Hope to charge future expenditures for well-drilling to capital (R. I, 28).

ords had been preserved; there was therefore no occasion to resort to estimates. (R. I, 174; R. III, 25–30.) In determining Hope's actual legitimate cost the Commission accepted all of the Company's book figures, making adjustments for items which were clearly wrong and about which there is no dispute.[32] The Commission thus adopted the accounting decisions of the Company's competent management made over a long period of years.

The "original cost" of Hope's interstate properties, as of December 31; 1938, as shown on the Company's books in the plant investment account, was $52,730,666. However, Hope estimated its "original cost" at $69,735,638. (R. I, 25, 197: Exh. 20, Statement B.) This figure, which is $17,004,972 more than the amount shown on its own books, included: (a) Items which have been identified as expenditures charged to operat-

[32] Two main adjustments were made to correct accounting errors. One reduced the cost, as shown by the books, by $2,057,618 on account of retirements of property which had not been recorded in the books. The Company made this inventory adjustment to correct its books and the Commission accepted it. The other adjustment, which was recommended by the Commission's staff, would restore the amount of $1,295,953 which had been arbitrarily written out of the plant accounts by the Company. (R. I, 35, 256–258.) The Commission observed that there was "considerable question" as to whether this item should be restored (R. I, 35), but because the arbitrary write-offs were contrary to sound principles of accounting, finance, and business administration and likewise contrary to the practices of the gas industry, the $1,295,953 was added to the book cost and included in the investment rate base.

ing expenses prior to December 31, 1938. Chief among these, and the largest item of difference between the Commission and Hope as to cost of plant, were expenditures for well-drilling amounting to $12,643,641. This was composed of $11,279,554 for wells drilled prior to 1923 by the Company itself, and $1,364,087 for wells drilled prior to 1923 by companies whose properties were acquired by Hope (R. I, 195; Exh. 20). Such expenditures were for labor, use of drilling-rigs, hauling, and similar costs—all known to the industry as "intangible well costs." They do not cover the cost of well equipment items, such as casing and tubing, which were included by the Commission in the "original cost." (b) Items for amounts that were never expended, such as interest during construction ($632,000), for which no charges were ever incurred. (R. I, 24, 180.) (c) Items which the Commission has already included in the rate base.[23]

Hope reached its estimate of "original cost" by ignoring its past accounting practice, instead making an inventory of all its properties, and then pricing the inventory according to prices obtained from vouchers and other documents and from engineer's estimates (R. II, 178–185, 201, 204–210).

The Commission refused to include these well-drilling and related costs in the rate base on the ground that those expenditures had been cor-

[23] The failure of the court below to notice this breakdown (R. IV, 184) was apparently an inadvertence.

rectly charged to operating expenses by the Company in accordance with the general practice of the industry; that they have already been recouped from Hope's customers; and that to include them in the rate base would result in duplicate charges (R. I, 26–29.[34] This accorded with the Commission's settled practice of accepting, in the process of determining cost or investment, books kept in the regular course of business, subject to the correction of errors found therein.

The majority below held that the entire $17,000,000 must now be capitalized and (less accrued depreciation) reflected in the rate base, because the items, "erroneously charged to expense" instead of to capital by the Company, "represent investment by the company in property which it uses in rendering the service for which rates are prescribed" (R. IV, 184–185, 189).

We submit that the court erred because (1) the items in question were properly charged to expense, and (2) since Hope has been reimbursed for them out of operating expenses, they do not represent investment on which Hope is entitled to a return. Since the intangible costs of well-drilling constitute more than $12,500,000 of the $17,000,000 involved, and present Hope's

[34] Although the Commission's present System of Accounts provides for the capitalization of such costs, it explicitly prohibits the reaccounting for items properly charged to expense in the past (R. I, 234–238; Ex. 58, R. III, 48).

contentions in their most favorable light, the following discussion and analysis will be in terms of these costs.

B. PRIOR TO 1923, HOPE INTENTIONALLY AND PROPERLY CHARGED WELL-DRILLING COSTS TO OPERATING EXPENSES

As the Commission found in accordance with the evidence, it was Hope's "consistent practice * * * up to 1923 to charge the cost of drilling wells to operating expense" (R. I, 27, 251–254; R. II, 173–177, 181). This reflected the almost universal practice not only of natural gas companies but of all extractive industries (R. I, 276–277), as Hope's chief accounting officer, who had been with the Company for many years, and the Commission's witnesses testified (R. II, 173–174; R. I, 253–256). Thus, in 1919, the Natural Gas Association of America opposed a provision in the first Uniform System of Accounts for Natural Gas Companies requiring the classification of well-drilling expenditures as plant costs, basing its opposition on the ground that such expenditures were incurred to maintain the business rather than to add to it (R. I, 255). And in 1921, Hope itself contended before the Public Service Commission of West Virginia that well-drilling costs should be treated as expense, and succeeded in obtaining permission so to charge them, thereby raising its rates to local consumers. *Re Hope Natural Gas Company*, P. U. R. 1921 E, 418, 433, 440. In that ruling the West Virginia

Commission observed that the failure of natural gas companies to capitalize well-construction expenses was commonly explained as follows: Since drilling expenses are incurred in an attempt to maintain sufficient gas production to meet demands, and since "notwithstanding such drilling, its available supply of gas is constantly and rapidly decreasing each year, * * * at least a part of the cost of maintaining this failing supply should be borne by consumers for the period within which such additional investment is made." *Re Hope Natural Gas Co.*, P. U. R., 1921 E, 418, 440.

However, in 1922, scarcely more than a year after its decision, the State commission issued a Uniform System of Accounts for all natural gas companies subject to its jurisdiction, including Hope, requiring them to charge expenditures for well-drilling to capital on and after January 1, 1923 (R. II, 174; R. I, 28). Hope accordingly changed its accounting procedure for these expenditures, not to correct any error, but rather to comply with the uniform system of accounts, to promote uniformity in the future. This change in accounting also recognized the progress then being made in gas and oil exploration and in drilling methods, which was bringing about the discovery of huge resources formerly unknown and unavailable and thus was removing the fear of rapid decrease in supply—the *raison d'être* of the former accounting procedure.

The propriety of Hope's accounting procedure up to 1923, as to well-drilling items, has been recognized by the Bureau of Internal Revenue. Questions as to the proper treatment of these expenditures have arisen under Section 212 (b) of the Revenue Act of 1918 (40 Stat. 1057, 1064–1065), which provided generally that the taxpayer's method of keeping books was to be accepted by the Commissioner of Internal Revenue, unless he found that method to be wrong. Under this provision, the Commissioner has allowed the taxpayer the option of capitalizing such items or charging them as ordinary and necessary operating expenses, provided that consistency is maintained. Income Tax Regulations, Reg. 103, Secs. 19.23 (m)–15 (b) (3); 19.23 (m)–16 (a) (1). This tax rule is still in effect, and most natural gas companies, including Hope, continue to charge such expenditures as operating expenses for income tax purposes (R. I, 255; R. II, 176).[35]

Since the intangible costs of well-drilling incurred prior to 1923 had already been properly charged by Hope to operating expenses, the Com-

[35] Even today, some oil companies still follow the practice of charging the intangible costs of well-drilling to operating expense for general accounting purposes (R. I, 254–256). This is in accordance with the general policy of conservatism, adhered to in extractive businesses, which frequently charges to expense items which in other industries would be charged to capital (R. I, 256). Cf. *Marsh Fork Coal Co.* v. *Lucas*, 42 F. (2d) 83 (C. C. A. 4); *Commissioner of Internal Revenue* v. *Brier Hill Collieries*, 50 F. (2d) 577 (C. C. A. 6).

mission properly refused to permit Hope now to renounce its own voluntary accounting practice, and to present the same items as capital expenditures in order to derive the benefit of an increased rate base.

C. THE WELL-DRILLING COSTS WERE FULLY RECOVERED THROUGH RATES AND SHOULD NOT NOW FORM A BASE FOR FURTHER ANNUAL RETURN

As we have shown, the practice of charging well-drilling costs directly to expense was common to the whole gas industry, and represented a managerial decision as to allocation of expenditures. Such a decision, like other managerial determinations as to allocation of costs, affects the operating figures of the utility and is bound to be reflected in the rates. Certainly Hope in fixing rates was influenced by the common managerial desire to recover all its costs, and these, prior to 1923, included well-drilling expenses. Indeed, the inclusion of these expenses was one of the means which Hope utilized to obtain a higher rate to consumers in West Virginia in 1921.[36] There can be little

[36] Even during the unregulated period, Hope as a public utility was required by the common law not to charge more than a just and reasonable rate. *Munn* v. *Illinois*, 94 U. S. 113, 126–127, 133; *Chicago, B. & Q. R. R. Co.* v. *Iowa*, 94 U. S. 155, 162. And the local commission could scrutinize the charges from Hope to the intrastate utilities in order "to prevent imposition upon the community served by the latter" (cf. *Houston* v. *Southwestern Tel. Co.*, 259 U. S. 318, 323), or in order to ascertain whether there is bad faith. Cf. *Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 U. S. 276, 288.

doubt, therefore, that during the period when Hope was charging the costs of well-drilling to operating expenses, that is from the Company's inception in 1898 up to 1923, Hope fully recouped the costs of well drilling. During this 25-year period, Hope was earning an annual average return of 15% on its average invested capital[37] (R. I, 34; R. III, 13–14), which is of course the return after meeting all annual operating expenses including well-drilling costs.

The decision of this Court in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, is in fact dispositive of this question, as was pointed out by the dissenting judge below (R. IV, 205–207). In the *Pipeline* case, involving an interim rate order under the Natural Gas Act, the Commission, solely for the purpose of that order, had "reluctantly" accepted as the rate base the Company's estimate of the value of all physical property—including excess capacity—calculated at reproduction cost new. The Company, however, sought to include in the rate base, *inter alia*, the costs of maintaining the excess capacity during the unregulated period, costs which had already been charged to operating expense. This the Commission rejected, and its determination was approved by this Court. The rationale expressed in the opinion (315 U. S. at 590–591) is closely

[37] The term "invested capital" is used to include capital stock and earned surplus. Hope's entire capital structure consists of common stock.

apposite here: Since the Company had treated these items as operating expenses to be compensated from earnings, and since the history of the Company before regulation showed an average annual return of 8% on the undepreciated investment, it could not be said "that the Commission has deprived the companies of their property by refusing to permit them to earn for the future a fair return and amortization on * * * *costs which the companies fail to show have not already been recouped from earnings* before computing the substantial 'net profits' earned during the first seven [unregulated] years." [Italics supplied.] This Court found it significant that the Company had "charged the out-of-pocket cost of maintenance of plant * * * as operating expenses deductible from net earnings before arriving at net profits", and pointed out the want of a showing "that the items which have never been treated as capital investment, have not been recouped during the unregulated period." See, also, *Natural Gas Co.* v. *Public Service Commission*, 95 W. Va. 557, 571, 121 S. E. 716, 723; *Peoples Gas Light & Coke Co.* v. *Slattery*, 373 Ill. 31, 25 N. E. (2d) 482, 493, appeal dismissed, 309 U. S. 634.[38]

ing expenses, received a substantial return on its investment, and has not shown that the items were not fully recovered. Since Hope is unable to show "with the clarity and definiteness befitting the cause" (*Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 164, 169; *Los Angeles Gas Co.* v. *R. R. Comm'n*, 289 U. S. 287, 304, 305; *St. Joseph Stock Yards Co.* v. *United States*, 298 U. S. 38, 53) that these expenditures "have not already been recouped from earnings," the Commission's refusal to permit Hope to earn for the future a fair return and depreciation on these expenditures cannot be said to deprive it of its property. *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 590, 591; *Des Moines Gas Co.* v. *Des Moines*, 238 U. S. 153, 166.

The ground upon which the court below held that these costs belong in the rate base, was that (R. IV, 185) "the wells are existing property used by the utility in its service to the public. The items entered into their cost just as truly as if they had been charged to capital account" (quoting Mr. Justice Brandeis' definition of original cost as "the amount actually paid to establish the utility." *Southwestern Bell Telephone Co.* v. *Public Service*

---

P. U. R. (N. S.) 389, 395. See also *Statement Relating to the Original Cost and Reclassification of Utility Plant Pursuant to the Provisions of Uniform Systems of Accounts for Electric, Gas and Water Utilities*, by the Committee on Statistics and Accounts of the National Association of Railroad and Utilities Commissioners, September 20, 1940.

*Commission,* 262 U. S. 276, 295). This reasoning, however, confuses cost with return, and overlooks the basic principle that Hope is entitled to a return only on that part of costs which have not been and are not currently being returned to it through operating expenses. The intangible costs of well drillings may be part of Hope's costs in establishing the utility, but Hope is entitled to a return on those costs only so long as its investment therein has not been fully recouped. There is no principle which would entitle it to a continuing return on an item of property whose cost has been fully recovered from the rates received, and which thus does not represent an investment, even though the property involved remains in use.

The effect of Hope's practice of charging the intangible well-drilling costs to operating expense was to require the customers to pay not only for the current service being rendered to them but also to contribute the amount of these costs to the capital of the company. Cf. *Re West Virginia Central Gas Co.,* P. U. R. 1924 E, 24, 34–35. Since the customers have in effect financed these well-drilling expenditures, their capitalization in the rate base would violate the long-established rule that a utility should not be permitted a return on property constructed and financed with customer contribution. (*Louisiana R. R. Comm.* v. *Cumberland Tel. & Tel. Co.,* 212 U. S. 414, 424, *et seq.*; *cf. Lindheimer* v. *Illinois Bell Telephone Co.,* 292

U. S. 151, 169, 174; *Detroit Edison Co.* v. *Commissioner of Internal Revenue*, 319 U. S. 98). And since it is "the actual cost of the property—the investment the owners have made" (*Los Angeles Gas Co.* v. *R. R. Comm'n*, 289 U. S. 287, 306) with which we are here concerned, it was proper for the Commission to forbid the capitalization of these items.

Contrary to the view of the court below, there is nothing in *Board of Public Utility Commissioners* v. *New York Telephone Co.*, 271 U. S. 23, which prohibits the Commission from excluding intangible well-drilling costs from the rate base. In that case, the Public Utility Commission found that the Telephone Company had been taking excessive annual depreciation allowances, and the Commission attempted to absorb such excess by imposing rates which would reduce the prospective depreciation allowances of the Company below the *actual* rate of depreciation. This Court thought this to be error, holding that "the law does not require the company to give up for the benefit of future subscribers any part of its accumulations from past operations. Profits of the past cannot be used to sustain confiscatory rates for the future" (271 U. S. at 32).

That case is plainly inapplicable here. The Commission has not attempted here to impose prospective confiscatory rates in order to absorb past excessive profits; it has merely refused to allow Hope to capitalize expenditures already

recouped and thereby prospectively to earn excessive profits through an annual return and depreciation allowance on such expenditures. The *New York Telephone* case involved an order by the regulatory body directing "the company to make up current losses out of reserves accumulated from the past"; it raised no question "in regard to including property in the rate base which had theretofore been paid for out of operating expenses." *Wheeling* v. *Natural Gas Co.*, 115 W. Va. 149, 160, 175 S. E. 339. The distinction is between a rate producing less than a fair return in order *to equalize past* excessive profits, which was presented in the *Telephone* case, and a rate producing a fair return on investment from which fully recouped items have been excluded in order *to prevent future* excessive profits, which we believe is presented here.

The *Telephone* case is not apropos for an additional reason. Since its effect is to enable the Company to accumulate more than sufficient to replace the property at the end of its service life and thereby earn more than a fair return, the rule of that case would not apply to "wasting asset businesses of limited life," such as the natural gas industry, for there "the Constitution does not require that the owner * * * shall receive at the end more than he has put into it." *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. at 593.

D. PRACTICAL CONSIDERATIONS SUPPORT THE COMMISSION'S EXCLUSION OF THESE ITEMS FROM THE RATE BASE

As a practical matter, it is fundamental to effective rate regulation that a proper decision once made as to accounting policy be binding as to all past transactions thereunder. In utilities as in other enterprises, lines of demarcation, although clear in theory, are frequently "difficult * * * to observe in practice with scientific precision" (*Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 173), and, therefore, much discretion must be exercised even with accepted principles and practices as guides.

For example, there are items in the Commission's present System of Accounts whose treatment is borderline. The costs of exploration and development, as an illustration, are treated as current expenses. Such costs, involving expenditures for delay rentals, nonproductive well-drilling, and related matters, are necessary to maintain production. The Chief of the Commission's Bureau of Accounts, Finances and Rates testified that there was considerable support in accounting theory for capitalizing such expenditures, but because the practice of the industry was to treat them as expenses, he recommended that the Commission approve that method. (R. I, 259–260.) The Commission consequently allowed $600,000 as annual expenses for exploration and development (R. I, 53–54, 65), and Hope has raised no objection thereto. But if it is successful in its claim

for the retroactive capitalization of well-drilling expenditures, there is no reason why similar claims could not be successfully prosecuted in a future rate case to capitalize exploration and development costs which are now allowed as expenses. And over a period of years the latter costs would greatly exceed the well-drilling costs. Again, under the Commission's System of Accounts, Hope may elect to charge administrative and general costs to expenses, or to capitalize them. Hope informed the Commission that it chose the former alternative; hence the Commission allowed the Company $138,018 in 1940 operating expenses (R. I, 49–50). It would be manifestly wrong to permit Hope to capitalize the same costs in some future rate case.

To permit renunciation by a company of its own accounting practice would invite juggling of items many years after their occurrence, in any manner likely to benefit the utility. For example, in asserting a right to capitalize the well-drilling expenses here involved, Hope rejects its own past accounting practice of many years' standing, impeaches its books kept competently for a long period of years, nullifies the decisions of its management, and impugns financial statements and reports properly and correctly made by the Company in the past to the tax authorities, to regulatory commissions, and to the public generally (R. I, 31; R. II, 173–176). It substitutes the figures of a specially engaged witness, who

admittedly knows nothing about the practices and policies of Hope or the industry (R. II, 178–370). Mr. Antonelli, who was the Company's "expert" on this subject, admitted that he was not an accountant, that he was unfamiliar with the operations of the Company, and that he was not concerned with the accounting practices of the Company nor with its management's decisions or policy in the past regarding the classification of expenditures between operating expenses and plant (R. II, 315).[39] It is this calibre of expertise which, if the Commission's action is overturned, would be invoked to resuscitate ancient items charged to operating expenses, and to tender them as items of capital for which the rate payer must pay an annual charge.

E. REMAINING ITEMS EXCLUDED FROM THE RATE BASE

The remaining items, totalling some $4,500,000, which the Commission excluded from original cost, were made up of overhead charges and minor items of property. The former arise largely from the exercise of *nunc pro tunc* judgment in the allocation of expenditures between plant-investment and expenses. There is even less reason for permitting readjustment here than in the case of items which are at least arguably related to capital investment.

---

[39] Even he was obliged to admit on cross-examination that the retroactive capitalization of such items was improper (R. II, 326–327).

The minor property items consist largely of the estimated cost of minor structures, such as sheds and toolhouses, for which separate accounting entries were not made. This accorded with proper accounting standards, for these items were not separately identified in the plant investment account and were merely subsidiary to main structures which were so identified (R. III, 32). The items in question have been charged either to investment or expense. If to investment, they are already in the rate base, although not so identified. If to expense, they were properly treated as expendable and should not be included in the rate base for the reasons discussed above in connection with well-drilling expenses.

As for the item of $632,000, consisting of interest during construction which was never incurred, little need be said. Even in reproduction cost estimates, this Court has approved the disallowance of hypothetical costs which were never incurred by the utility. *Los Angeles Gas Co.* v. *R. R. Comm'n*, 289 U. S. 287, 310; *Wabash Valley Electric Co.* v. *Young*, 287 U. S. 488, 500.

## IV

### THE COMMISSION PROPERLY USED THE ECONOMIC-SERVICE-LIFE PRINCIPLE IN DETERMINING ACCRUED DEPRECIATION AND DEPLETION

In determining the proper rate base, the Commission first computed the original cost of Hope's

interstate properties, and then deducted therefrom the accrued depreciation. The Commission rejected, as being without merit, the observed-depreciation method employed by the Company, and instead applied the economic-service-life principle to the cost of the property, resulting in a figure of $22,328,016 for accrued depreciation and depletion (R. I, 10, 45, 50).

The lower court condemned these findings of the Commission on the grounds that they were based on cost rather than present value of the property, and that they neglected the actual condition of the property for "theoretical formulas" (R. IV, 189).

At this point we argue that the formulas condemned by the lower court are in accord with the accepted views as to the nature of depreciation and the proper method of accounting therefor. The propriety of the cost basis used for this purpose is discussed in detail in Point V of this brief, pp. 99–108 *infra*.

The economic-service-life principle for determining accrued depreciation reflects the view, now accepted by almost all informed opinion, that depreciation is the diminution of the service capacity of the property or, in terms of the monetary measure of the original service capacity, the diminution in service value. See *Proceedings of the National Association of Railroad and Utilities Commissioners*, 1938, pp. 441–443; *id.* 1943 (Report of Committee on Depreciation) p. 30; *Depre-*

*ciation Charges of Telephone and Steam Railroad Companies*, 177 I. C. C. 351, 372–382. This is the uniform conclusion of all rate-making agencies, both federal and state.[49] It is also the view

[49] *Uniform System of Accounts for Natural Gas Companies* promulgated by the Federal Power Commission, effective January 1, 1937, defines depreciation as "the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of gas plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among the causes to be given consideration are wear and tear, decay, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand and requirements of public authorities, and, in the case of natural gas companies, the exhaustion of natural resources." Service value is defined as "the difference between original cost and net salvage value." See also *Uniform System of Accounts for Class A and Class B Telephone Companies* promulgated by the Federal Communications Commission, effective January 1, 1937; *Uniform System of Accounts for Electric Utilities* promulgated by the Federal Power Commission, effective January 1, 1937; *Uniform System of Accounts for Electric Utilities* recommended by the National Association of Railroad and Utilities Commissioners (1936); *Uniform System of Accounts for Natural Gas Companies* recommended by the National Association of Railroad and Utilities Commissioners. Twenty-seven States have adopted the Federal Communications Commission system for Class A and Class B telephone companies identically; eight have adopted it substantially; no system is prescribed in the other States. See Federal Communications Commission Release, August 18, 1941. *Accounting Systems Prescribed by the States for Use of Telephone Companies.* Similar systems have been adopted by the majority of States for electric and gas utilities. See *State Commission Jurisdiction and Regulation of Electric and Gas Utilities*, published by the Federal Power Commission, January 1941, pp. 11, 35.

expressed by this Court in *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 167. This view of depreciation is based on the simple principle that the economic value of property—its ability to earn a return—consists of the total units of useful service which it is capable of producing. Thus, investments are made in physical property solely because of the economic service which it will render, and the investments represent cost of stored-up services. It is the using up of these economic services, referred to as service capacity, service life, or economic life, that is depreciation (R. I, 375–377). Paton and Littleton, *An Introduction to Corporate Accounting Standards*, p. 84; Porter and Fiske, *Accounting*, p. 406; Taussig, *Principles of Economics*, Vol. I, p. 70; *Proceedings of the National Association of Railroad and Utilities Commissioners* (1938) pp. 441–445; *id.* (1943) p. 91; *Depreciation Charges, of Telephone and Steam Railroad Companies, loc. cit. supra*, pp. 90–91.

The annual depreciation is thus the amount of the service capacity which has been consumed in any one year. Such consumption is as much a cost of operation as fuel or any other property which is totally consumed, physically and economically, during the year; and the annual depreciation cost is thus an operating charge properly to be met from current revenues. Cf. *Illinois Central Railroad* v. *Interstate Commerce Commission*, 206 U. S. 441, 462.

It is for this reason that in fixing reasonable rates there should be included in "operating expenses, that is, in the cost of producing the service, an allowance for consumption of capital * * *." *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 167.

The main purpose of depreciation accounting is to determine as accurately as possible the cost of property consumed in operations during a given period such as a year. The annual allowance for depreciation therefore compensates for the economic consumption of capital during that year and maintains the integrity of the investment in the service rendered. The reserve requirement on any selected date should be a measure of the extent to which the service lives of the properties have expired and therefore is properly the total of the annual provisions for depreciation less actual retirements of property. The preferred depreciation method is known as the "straight-line-basis". See *Report of the Committee on Depreciation*, National Association of Railroad and Utilities Commissioners, 1943, p. 91.

The method is equally applicable to both depreciation and depletion, and to ascertain the depreciation and depletion reserve requirements of Hope, the Commission utilized this "straight-line-basis". The Commission obtained estimates of the over-all or average service lives of the property by classes, from a qualified staff engineer who made a detailed inspection of the present

physical condition of the property as an aid to these determinations (R. I, 42; R. III, 157–158);[41] those average service lives were converted into depreciation rates and then applied to the "service value" of the property[42] to determine the por-

[41] The lower court, in condemning the Commission's findings as to accrued depreciation for allegedly failing to reflect the present condition of Hope's properties (R. IV, 189–193), overlooked this inspection of these properties. As pointed out in the minority opinion, the consideration given to present condition "as a guide for estimating the property's service life" and the annual depreciation expense to be allowed, is clearly adequate (R. IV, 205). *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 593–595; see Brief for the Federal Power Commission and Illinois Commerce Commission, Nos. 265 and 268, October Term, 1941, p. 86 *et seq.* Moreover, there is substantial evidence in the record to show that studies were made of Hope's retirement experience and maintenance policies over its entire history, to aid in the determination of accrued depreciation (R. III, 158 *et seq.*). Cf. *Depreciation Charges of Telephone and Steam Railroad Companies*, 177 I. C. C. 351, 406–408; *Smith* v. *Illinois Bell Tel. Co.*, 282 U. S. 133. The resulting determinations thus "meet the controlling test of experience." *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 170.

[42] The depreciation rates are not applied to the original cost of the property, but rather against its "service value." The latter is determined by subtracting from original cost the salvage value of the property, that is, the amount which would be received for property retired after the expiration of its service life (R. III, 155). Thus property which cost $1,000 originally, with a salvage value of $100 at the expiration of its full service life, would have a "service value" of $900. Hence, if 90% of its service life has expired, the property would be valued at $190 (i. e., 10% of its service value, or $90, plus its ultimate salvage value of $100). Nevertheless, the lower court found that the Commission had in some cases determined depreciated value to be less

tion of the cost which had expired in rendering service (R. I, 41–43; R. III, 157–174, 184–197). To illustrate the application of this formula to compute depreciation and depletion: If a well which will produce 10,000,000 M. C. F. during its life had already produced 1,000,000 M. C. F., 1/10 of the investment in such production facilities has been consumed in operation, requiring that 1/10 of its cost be recorded as an expense, and be deducted from cost as depreciation. So also, if a pipeline which will last 20 years had been in use for one year, 1/20 of its economic life is considered expired; accordingly, 1/20 of the cost should be recorded as an expense and deducted from the cost of the pipeline as depreciation.[43]

---

than "salvage value." Aside from the mathematical impossibility of such a result, the so-called "salvage value" used by the lower court represented the value of property "when removed from its wells or lines and held for further use" (R. IV, 189). The application of the term "salvage" to the value of such property is a misnomer, for since its service life had not expired, its value at that time represented more than salvage value. Moreover, in condemning the Commission's results, the court relied on figures obtained from Hope's "per cent condition" study, which had already been demonstrated by the Commission to be defective and unreliable (R. I, 37–38). Cf. *Los Angeles* v. *Southern California Telephone Co.*, 14 P. U. R. (N. S.) 252, 273; *Re Rochester Gas & Electric Corp.*, 33 P. U. R. (N. S.) 393, 468–490; 1 Bonbright, *The Valuation of Property*, 205.

[43] As a natural consequence of these methods, depreciation expense and accrued depreciation are harmonized. Failure to insist on such correlation frequently results in depreciation reserve in excess of the amount required to restore or

The formula used by the Commission to determine accrued depreciation and depletion and annual allowance therefor has been analyzed and approved by this Court. *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 167, 168; *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575. The latter decision specifically approved use by the Commission, under the Natural Gas Act, of the so-called amortization method of depreciation, and upheld an "annual amortization allowance [which] if applied over the entire twenty-three-year life of the business, is sufficient to restore the total capital investment, at the end," from earnings. 315 U. S. at 594.[44]

The formula espoused by the Commission finds a wealth of administrative and expert support. The Interstate Commerce Commission and the Bureau of Internal Revenue have also approved the

---

replace the equipment. *Louisiana R. R. Comm.* v. *Cumberland Tel. & Tel. Co.*, 212 U. S. 414; *Lincoln Gas Company* v. *Lincoln*, 223 U. S. 349; *Clark's Ferry Co.* v. *Commission*, 291 U. S. 227; *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151; *St. Joseph Stock Yards Co.* v. *United States*, 298 U. S. 38; *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575.

[44] Fundamentally, both amortization as used by the Commission in the *Pipeline* case, and straight line depreciation as used by the Commission in the instant case, involve application of the economic-service-life principle. There is likewise no difference in the ultimate result. See Bauer & Gold, *Public Utility Valuation*, p. 199 *et seq.*; Barnes, *The Economics of Public Utility Regulation*, p. 263 *et seq.*

"straight-line" depreciation method.[45] The Special Committee on Depreciation of the National Association of Railroad and Public Utilities Commissioners has recommended it for accounting and regulatory purposes because it is practical and "equitable to the utility, the customer and the investor." Report of Committee on Depreciation, National Association of Railroad and Utilities Commissioners (1943) p. 91. And most

proval of the courts, the Commission's methods of determining actual accrued depreciation and depletion.[46]

---

[45] *Depreciation Charges of Telephone and Steam Railroad Companies*, 177 I. C. C. 351, 408, 413. The Bureau of Internal Revenue sanctions the straight-line and unit-of-production methods, because they are accurate, simple, self-correcting, administratively desirable and facilitate verification. U. S. Treasury Department, Bureau of Internal Revenue, Bulletin "F" (January 1931, revised January 1942), pp. 4–5.

[46] *Joplin Gas Co.* v. *Public Service Commission*, 296 Fed. 271, 278 (W. D. Mo.); *New York Telephone Co.* v. *Prendergast*, 36 F. (2d) 54, 66 (S. D. N. Y.); *International Railway Co.* v. *Prendergast*, 1 F. Supp. 623, 629 (W. D. N. Y.); *Pacific Gas & Electric Co.* v. *Devlin*, 203 Pac. 1058, 1062 (Cal.); *State ex rel. Oregon-Washington Water Service Co.* v. *Hoquiam*, 286 Pac. 286, 290 (Wash.); *Long Island Lighting Co.* v. *Maltbie*, 292 N. Y. S. 807, 809 (App. Div.); *Yonkers Railroad Co.* v. *Maltbie*, 296 N .Y. S. 411, 416 (App. Div.); *Depreciation Charges of Telephone and Steam Railroad Companies*, 118 I. C. C. 295, 356; *Re Interstate Power Company*, (F. P. C.) 32 P. U. R. (N. S.) 1, 11; *Re Chicago District Electric Generating Corp.*, (F. P. C.) 39 P. U. R. (N. S.) 263, 275; *Re Canadian River Gas Co.*, (F. P. C.) 43 P. U. R.

If additional argument were needed to justify the Commission's depreciation and depletion formula, it is to be found in the fact that Hope had set up in its reserve for depreciation and depletion an amount ($45,930,668) which was substantially greater than the actual depreciation and depletion as determined by the Commission in accordance with the straight-line method.[47]

Rev. 846, 866 (1938); Mason, *Principles of Public Utility Depreciation*, p. 103 (1937.; *Depreciation—A Review of Legal and Accounting Problems*, Wisconsin Public Service Commission, pp. 109–121 (1933); 2 Bonbright, *The Valuation of Property* (1937), p. 1140; Proceedings of National Association of Railroad and Utilities Commissioners (1938), pp. 472–474.

[47] Hope, by the end of 1940, had accumulated a depreciation reserve of $45,930,668 (including $7,552,918 transferred to

Inasmuch as the amount found by the Commission came to some $24,000,000 less than the reserve accrued on Hope's books—a reserve representing Hope's own judgment as to the amount of investment which has been returned on account of depreciation and depletion—the Commission's result is hardly arbitrary or confiscatory.

## V

### THE COMMISSION PROPERLY USED A PRUDENT INVESTMENT BASE IN DETERMINING THE ANNUAL ALLOWANCE FOR DEPRECIATION AND DEPLETION

Applying the economic-service-life principle discussed above to the cost of Hope's properties, the Commission recognized an annual depreciation and depletion allowance of $1,460,037 as an operating expense (R. I, 36–45, 51–53). That annual

---

surplus) (R. I, 81; R. III, 176). The Commission, however, deducted only $22,328,016, roughly $24,000,000 less. One of the Commissioners dissented, asserting that the full amount accrued by the Company should be deducted. *New York Telephone Co. v. Prendergast*, 36 F. (2d) 54, 66 (S. D. N. Y.); *Re Southwestern Bell Tel. Co.*, 9 P. U. R. (N. S.) 113, 118, 138, affirmed, 71 P. (2d) 747, 751; *Louisiana Pub. Serv. Comm. v. Southern Bell Tel. & Tel. Co.*, 8 P. U. R. (N. S.) 1, 12, affirmed, 174 So. 180, 189; *Re Northwestern Electric Co.*, P. U. R. 1933 A, 493, 512. However, the Commission's action is consistent with its policy in rate regulation, of deducting only actual accrued depreciation irrespective of the past provisions made by the company (R. I, 39–40). On this view, since accrued depreciation is the criterion, business and accounting practice in making provision for the cost of operation represented by the consumption of service life is immaterial.

allowance was determined by the same methods used to ascertain the accrued depletion and depreciation actually existing in the properties: depreciation expense was computed by the straight-line method; depletion expense was computed by the unit-of-production method, thus varying with the actual amount of gas produced. The annual rates thus obtained for depreciation and depletion were then applied to the actual legitimate cost of the property (the investment) to give the annual allowance for depreciation and depletion. As the Commission stated, it was necessary to use the same method and base for computing the accrued depreciation and depletion, and for computing the future annual allowance therefor, because the annual allowance measures the economic-service-life of the utility's property consumed in one year, whereas accrued depreciation, being the sum of the depreciation allowances made in the past, measures on a given date the expiration of the service-life of the property. Consequently, the annual depreciation and depletion allowance must be correlated with the accrued depreciation and depletion in order to avoid injustice both to the utility and to the rate payer. (R. I, 37, 52.)

Relying on *United Railways* v. *West*, 280 U. S. 234, 253–254, the court below condemned the Commission's action in computing the annual allowance upon the basis of actual legitimate cost, and held that the allowance should have been based

upon the "present fair value" of Hope's physical property (R. IV, 192–198). This holding is indefensible, we submit, whether or not we are right in our view that the rule of *Smyth* v. *Ames* is no longer law.

If the doctrine of *Smyth* v. *Ames* is no longer controlling, as we have argued above (pp. 49–70), there can be no possible doubt as to the validity of the Commission's use of a prudent investment base to determine accrued depreciation and annual depreciation allowance, just as it may be used for the computation of a fair return. However, we submit that under the decisions of this Court, the Commission's action in this respect is proper even if the rule of *Smyth* v. *Ames* is still applicable to the rate base.

In *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, this Court approved the Commission's use of the actual cost, rather than the reproduction cost, of the utility's property as the base to be amortized by annual allowances in operating expenses. This Court agreed with the Commission, that "to make an allowance of amortization in excess of cost * * * would not be the computation of a proper expense but instead the allowance of additional profit over and above a fair return. Manifestly such an additional return would unjustly penalize consumers" (315 U. S. at 593).

551452—43——8

The majority below sought to distinguish the *Pipeline* case in this connection on the ground that Hope is not a "wasting-asset business of limited life," as was the utility considered in the *Pipeline* case, but is rather "an ordinary public utility which is required by law to continue its service to the public." (R. IV, 195). This purported distinction, besides being insubstantial, ignores the controlling principles recognized by this Court in the *Pipeline* case.

Although, unlike the *Pipeline* case, there is no stipulation in the instant case as to the time when Hope will be forced out of business for lack of reserves, it would be the first to concede that its present available natural gas reserves are not unlimited. The record establishes that the Company is contemplating an extension of its pipeline to new sources of supply, in order to meet its requirements (R. I, 47; R. III, 149). If Hope does not build such a pipeline extension, sooner or later, but inevitably, it must be forced out of business for lack of reserves. For it is common knowledge that as natural gas is consumed, reserves are depleted and the ultimate exhaustion of the supply is inevitable. This was equally true of the company involved in the *Pipeline* case, which expected to terminate business in 1954 for lack of reserves but will unquestionably be able to continue in business after 1954 if it obtains additional reserves. The company in the *Pipeline*

case was not a sport within the class of extractive industries; it was a "wasting asset business of limited life" solely because it was engaged in producing natural gas. All such companies are in the same position, and if an amortization allowance may be grounded upon cost for the natural gas company involved in the *Pipeline* case it is equally permissible for Hope. Certainly, the mere absence of an accord as to the precise year in which Hope's reserves will be exhausted, present in the *Pipeline* case, should not endow Hope with a constitutional right to have its depreciation allowance computed on a reproduction cost basis—a basis which will compel ratepayers to return more than the amount invested.

But the propriety of an annual depreciation allowance based on cost does not depend upon the nature of the utility's business. In *Lindheimer v. Illinois Bell Telephone Co.*, 292 U. S. 151, involving a telephone company, which is clearly not a "wasting asset business of limited life," this Court approved an annual depreciation allowance based on cost, pointing out that where the annual depreciation allowance is excessive, "to that extent subscribers for the telephone service are required to provide, in effect, capital contributions, not to make good losses incurred by the utility in the service rendered and thus to keep its investment unimpaired, but to secure additional plant and equipment upon which the utility expects a

return" (*supra* at 169).[48] See also *United States* v. *Ludey*, 274 U. S. 295, 300–302. Indeed, by recognizing cost as a permissible basis of computing the depreciation allowance, the *Lindheimer* case modifies the contrary holding in the earlier *West* case, 280 U. S. 234, on which the instant court below relied. See Mr. Justice Butler, concurring in *Lindheimer* v. *Illinois Bell Telephone Co.*, 292 U. S. 151, 176; *Alexandria Water Company* v. *City Council of Alexandria*, 163 Va. 512. This is the view uniformly accepted by regulatory bodies, for despite the *West* case, the federal and state utility commissions, almost without exception, have continued to follow cost accounting for depreciation.[49]

---

[48] Even if it is assumed that the purpose of annual depreciation allowances is to replace in the future the property which is currently being consumed, the fluctuation in price level would destroy any predictable relation between present value and future replacement cost. "To use as a measure of the year's consumption of plant a depreciation charge based on fluctuating present values substitutes conjecture for experience. Such a system would require the consumer of today to pay for an assumed operating expense which has never been incurred and which may never arise." *United Railways* v. *West*, 280 U. S. 234, 278 (Brandeis, J., dissenting). See also *Excess Income of St. Louis & O'Fallon Ry. Co.*, 124 I. C. C. 3, 29, 41. The price level at the time of replacement being unpredictable, present replacement cost is certainly no more reliable a basis for annual depreciation allowance than original cost. *United Railways* v. *West*, *supra*, at 290 (Stone, J., dissenting).

[49] *Depreciation Charges of Telephone and Steam Railroad Companies*, 177 I. C. C. 351, 374; *Re Interstate Power Co.*, (F. P. C.) 32 P. U. R. (N. S.) 1; *Re Chicago District Electric Generating Corp.*, (F. P. C.) 39 P. U. R. (N. S.) 263;

Regardless of the nature of Hope's business, since the annual allowance provided by the Commission is based upon a reasonable determination of the life of Hope's existing investment and will reimburse Hope to the amount of that investment, the constitutional requirements are met. Hope's investment is continually being consumed in service and under the Commission's method the Company is reimbursed for the cost concurrently with the consumption. The funds supplied by the customers in the form of rates to cover annual depreciation and depletion are immediately available to Hope for investment in additions and replacements, enabling Hope to earn without delay an annual return and annual depreciation allow-

ance upon that new property. The utility is therefore made whole and the integrity of its investment maintained.[30] Obviously, the Company ceases to have a right to a return upon the portion of the investment which has been consumed, and which is recouped from the rate payers through revenues covering annual depreciation allowances. See *Depreciation Charges of Telephone and Steam Railroad Companies*, 118 I. C. C. 295, 355; 177 I. C. C. 351, 410; Barnes, *The Economics of Public Utility Regulation* (1942), 261.

Accepted practice sanctions the Commission's choice of original cost as a basis for computing the depreciation allowance. To base the depreciation charge on cost is "the rule sanctioned by the universal practice of businessmen and governmental departments." (See Brandeis, J., dissenting in *United Railways* v. *West*, 280 U. S. 234, 275, citing an impressive array of authority drawn from all relevant data.) The practice of basing the depreciation charge on cost has been adopted and is being followed not only by non-

[30] No injustice to the Company would result from the fact that when property is retired, the cost of the replacing property may exceed the original cost of the retired property. For the new capital invested would be included in the rate base, and the Company entitled to a return thereon. Moreover, under the cost basis of depreciation, the depreciation allowance for the replacing property would be computed on its cost, and not on the cost of the retired property. Cf. *United Railways* v. *West*, 280 U. S. 234, 279 (Brandeis, J., dissenting).

utility enterprises,[51] but also in all the systems of accounts established by governmental rate-making agencies, federal and state.[52] The use of original cost in determining the depreciation charge is justified, as Mr. Justice Brandeis has demonstrated, by every relevant consideration of prudent business and accounting practice.

The universal business practice of basing depreciation on cost has significance for reasons other than the weight to be accorded to commercial custom. We are dealing here with the constitutional guarantee of due process; in its application to the present case, that guarantee, as we show above in discussing the underlying principle of *Smyth* v.

---

[51] Gilman, *Accounting Concepts of Profit*, 348–349, 493; Sanders, Hatfield, and Moore, *A Statement of Accounting Principles* (1938), 31–32, 58–59, 60–65; Saliers, *Depreciation Principles and Applications*, 63, 68–69, 110; Montgomery, *Auditing Theory and Practice* (6th ed. 1940), 480; Paton and Littleton, *An Introduction to Corporate Accounting Standards*, 66, 89; see also Peloubet, *Special Problems in Accounting for Capital Assets*, 61 Journal of Accountancy 185; May, *The Influence of Accounting on the Development of an Economy*, 61 Journal of Accountancy 15–16; Bell and Jones, *Auditing* (1941), 245. Economists and accountants have likewise insisted that cost is the only proper basis of utility depreciation accounting. Mosher and Crawford, *Public Utility Regulation* (1933), 160–162; Jones and Bigham, *Principles of Public Utilities* (1937 ed.), 491 et seq.; Wilson, Herring and Eutsler, *Public Utility Regulation* (1938), 196 et seq.; see also Haun, *Inconsistencies in Public Utility Depreciation*, 38 Mich. L. Rev. 160, 479.

[52] The systems of account referred to in n. 40, p. 91, *supra*, all adopt cost as the basis of depreciation.

*Ames*, means simply that there will be no arbitrary governmental interference with property rights. To limit a utility to a depreciation charge which is the same as that universally made by all business men, even though they are completely free of regulation, cannot in any realistic sense be characterized as arbitrary governmental action. To the contrary, the Commission would be guilty of arbitrary conduct if it blinded itself to the practical experience of business men and thereby saddled upon consumers a charge having no basis in business realities.[53]

In the light of these considerations, we submit that even under the rule of *Smyth* v. *Ames*, rates which provide for a full return of the original investment satisfy all constitutional requirements in this respect.

---

[53] The court below held that the Commission should have made an annual allowance for depreciation and depletion on capital added to the rate base after 1940 (R. IV, 196). But the Commission was under no legal obligation to make any allowance whatever for future capital additions. *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 592. Hence in allowing almost $1,400,000 for net future capital additions for the years 1941–43 (R. I, 50), the Commission was conferring a benefit to which Hope was not entitled as a matter of law. It can hardly demand the additional boon of a depreciation allowance on this gratuity. Moreover, the amount properly to be allowed for depreciation will depend on future operations, which cannot easily be forecast.

## VI

### HOPE WAS NOT HARMED BY THE EXCLUSION FROM 1940 OPERATING EXPENSES OF $165,963 FOR AN EXPERIMENTAL DEEP-TEST WELL

In accordance with the conservative practice of natural-gas companies, Hope had followed the practice of charging all exploration and development costs to operating expenses. The Commission approved of this practice and found that Hope's exploration and development costs for 1940 were $407,920, but excluded from such costs the sum of $165,963 for an experimental deep-test well which was completed dry in 1941 and charged by Hope on its books as an operating expense for 1941. The court below upheld Hope's contention that this sum should have been included in 1940 operating expenses. However, the court observed that "the matter can have little bearing in future hearings, as the test period will doubtless cover 1941 as well as 1940 and it will be immaterial which year carries the charge" (R. IV, 198).

Without discussing the propriety of excluding these costs from operating expenses for 1940, it is clear that Hope has not been harmed. The Commission delved into the details of Hope's transactions for 1940 solely to provide a basis for estimating its future expenses. Although the Commission found Hope's exploration and development costs to be $407,920 for 1940, it allowed $600,000 as the proper and reasonable annual

future allowance for exploration and development expenses, which represented a substantial increase in the expenses experienced by the Company in 1940. Since the amount found by the Commission ($407,920) plus the additional amount claimed by Hope ($165,963) is roughly $25,000 less than the $600,000 allowed by the Commission as the annual future allowance for such purposes, Hope cannot validly claim to have been harmed by this exclusion from its exploration and development costs for 1940.

## VII

### THE COMMISSION'S FINDINGS AS TO THE LAWFULNESS OF PAST RATES WERE PROPER AND, IF REVIEWABLE, SHOULD BE UPHELD

As early as July 1938 the Cities of Cleveland and Akron had filed complaints with the Commission, charging that the rates collected by Hope from the East Ohio Gas Company were excessive and unreasonable (R. II, 1, 7). Cleveland prayed specially for a determination by the Commission that Hope's collected rates from East Ohio were unreasonable and therefore unlawful, and for a determination of the just and reasonable rates from June 30, 1939, to the date of the Commission's decision. Such determinations were requested "in the aid of State regulation" and to afford the Public Utilities Commission of Ohio a proper basis for disposition of a fund collected by East Ohio under bond from

Cleveland consumers since June 30, 1939 (R. II, 14).[34]

The Commission, when it entered its order on May 26, 1942, reducing the rates to be charged by Hope after July 1, 1942, also made "Findings As To The Lawfulness Of Past Rates" (R. I, 8–13). It found that the rates charged by Hope during the period from June 30, 1939, to the effective date of the order were unjust and unreasonable and therefore "unlawful," and that the charges to East Ohio were excessive in the amount of $830,892 in 1939, $3,219,551 during 1940 and $2,815,789 on an annual basis since 1940 (R. I, 12–13). These findings were made as "an aid to state regulation" pursuant to the complaints of the Cities of Cleveland and Akron (R. I, 67–69; R. II, 1–2, 7–8, 14–15).

The court below set aside the Commission's findings as to past rates, holding that rates filed with the Commission pursuant to Section 4 (c) of the Act "become the only lawful rates which the utility could charge or accept" until changed by a Commission order prescribing rates for the future, and that the Commission could make findings with respect to past rates only as a step in the process of fixing rates for the future, and not "as an aid

[34] This fund represents the difference between East Ohio's previous rates and the lower rates established by ordinance of the City of Cleveland, which East Ohio is collecting pending its appeal from the ordinance to the Public Utilities Commission of Ohio.

to state regulation" (R. IV, 199–203). The court also held that if viewed as an incident of the Commission's power to fix future rates, the findings as to past rates were invalid for the same reasons as the future rate order and for the further reason that the Commission based these findings on experience for the years in question rather than on estimates taken from the experience of a prior period (R. IV, 200, 202).

We submit that this action was error since the findings were within the statutory power of the Commission and were proper for the reasons advanced above to sustain the order prescribing future rates. While we have serious doubts as to whether the findings as to past rates present a matter for judicial review, we believe that if they are reviewable, their propriety should be sustained in this Court.

A. THE COMMISSION'S "FINDINGS AS TO THE LAWFULNESS OF PAST RATES" MAY NOT BE REVIEWABLE HERE

Section 19 (b) of the Natural Gas Act vests in the courts of appeals jurisdiction to review any "order" of the Commission upon the petition of a party "aggrieved" by the order. In the exercise of this jurisdiction, courts reviewing a rate order of the Commission would necessarily have the right to review all findings made by the Commission in connection therewith, including findings as to the reasonableness of past rates made in the course of issuing such rate order.

However, it is doubtful whether there may be judicial review of findings as to past rates, when made independently of a rate order, for example as an aid to state regulation, which was here the case. The fact that these findings are not designated as an order is of course immaterial to the question of reviewability for "it is the substance of what the Commission has purported to do and has done which is decisive. *Powell* v. *United States,* 300 U. S. 276, 284–285; *A. F. of L.* v. *Labor Board,* 308 U. S. 401, 408." *Columbia Broadcasting System* v. *United States,* 316 U. S. 407, 416.

But considering the substance and the legal effect of the findings, we entertain substantial doubts whether the findings standing alone have the legal impact upon Hope which this Court has hitherto deemed necessary for judicial review. The findings declare that rates charged by Hope since June 30, 1939, are unlawful, but they do not require or inhibit any action by Hope as a result thereof. It is not contended that the Commission has threatened to impose any legal sanctions as a result of the findings, or has attempted to enforce them in any way, or that as a result of these findings any of Hope's customers have refused to deal with the Company (cf. *Columbia Broadcasting System* v. *United States, supra*), and there is no evidence of any other substantial adverse effect therefrom.

It is true that the findings in question were made "as an aid to state regulation," and may furnish the basis for an order by a state regulatory body or court for repayment of excessive rates. At present, however, these findings are merely a preliminary to possible future action in proceedings brought before totally independent governmental bodies, proceedings whose outcome may hinge upon many factors unrelated to the Commission's findings and whose result might conceivably leave Hope unharmed. For these reasons, we incline to the view that the findings do not have such effect upon Hope's legal rights nor such legal or substantial impact upon Hope's interests to make them reviewable under the principles enunciated by this Court. *Rochester Tel. Corp.* v. *United States*, 307 U. S. 125, 130; *United States* v. *Los Angeles & S. L. R. Co.*, 273 U. S. 299, 309, 310.

We do not mean to imply that the state commission is at liberty to ignore the findings. They are plainly admissible in the state proceedings (see *United States* v. *Los Angeles & S. L. R.*, 273 U. S. 299, 312), and their effect is strengthened by the fact of affiliation between respondent and the local distributing companies. Cf. *Houston* v. *Southwestern Tel. Co.*, 259 U. S. 318, 323. We recognize, moreover, the practical advantage of permitting judicial review in proceedings to which the Federal Power Commission is a party. The Commission has no desire to avoid review, and

for that reason did not press below the non-reviewability of the findings. But since the question goes to the statutory authority of the court below, we feel obliged to raise the issue.

B. THE COMMISSION HAS AUTHORITY TO MAKE FINDINGS AS TO LAWFULNESS OF PAST RATES "AS AN AID TO STATE REGULATION"

The authority granted to the Commission in the Natural Gas Act to fix rates "to be thereafter observed and in force" (Sec. 5 (a)) admittedly does not include authority to *fix* past rates. But there is clearly power under the Act to determine and make findings as to the *lawfulness* of past rates. Section 14 (a) empowers the Commission to investigate any matter in order to determine whether any person *has* violated any provision of the Act, and Section 4 (a) explicitly forbids and declares unlawful the charging of unjust and unreasonable rates. Since the charging of such rates is an unlawful act and in violation of Section 4 (a), an investigation of the lawfulness of Hope's past rates is clearly within the ambit of the investigatory power granted the Commission by Section 14 (a).[55] Moreover, the Commission may, upon its own motion or at the request of a state commission, investigate and determine the

[55] The Interstate Commerce Commission has made similar determinations under an analogous provision of the Motor Carrier Act of 1935 (Secs. 216, 217). See *W. A. Barrows Porcelain Enamel Co.* v. *Cushman Motor Delivery Co.*, 11 M. C. C. 365, 366; *Dixie Mercerizing Co.* v. *ET & WNC Motor Transportation Co.*, 21 M. C. C. 491, 492.

cost of production or transportation of natural gas in cases where it may not establish rates (Section 5 (b)), and is required by Section 17 (c) to "make available to the several State commissions such information and reports as may be of assistance in State regulation of natural gas companies." The findings as to past rates fall within the contemplation of these provisions, constituting not only determinations as to cost but also "information and reports" as to lawful and reasonable rates for the period in question, as an aid to State regulation.

The court below discerned jurisdictional objections to the findings because rates filed by companies with the Commission pursuant to Section 4 (c) of the Act become the "lawful" rates until changed by Commission order, and such rates, it thought, may not be found to be "unlawful" (R. IV, 200, 202). The court's error, we suggest, consists in overlooking the clearly established distinction between "legal" and "lawful" rates. Companies subject to the Act must "file with the Commission" and "keep open * * * for public inspection, schedules showing all rates and charges for any transportation or sale subject to the jurisdiction of the Commission" (Section 4 (c)). These are the "legal" rates which must be charged to all consumers. Cf. *Arizona Grocery Co.* v. *Atchison, Topeka & Santa Fe Ry. Co.*, 284

U. S. 370, 384; *Louisville & N. R. Co.* v. *Maxwell*, 237 U. S. 94. But in addition to the requirement as to filing of rates, the Act imposes a duty on all companies subject to the jurisdiction of the Commission to charge only "just and reasonable" rates, and declares unlawful "any such rate or charge that is not just and reasonable" (Section 11 (a)). The distinction is plain: the filed rates are the "legal" rates, but only just and reasonable rates are the "lawful" rates. "In other words, the legal rate was not made by the statute a lawful rate—it was lawful only if it was reasonable." *Arizona Grocery Co.* v. *Atchison, Topeka & Santa Fe Ry. Co.*, 284 U. S. 370, 384; see *Re Home Gas Co.*, 39 P. U. R. (N. S.) 102, 109.

The holding below, that rates filed under Section 4 (c) become the only "lawful" ones, would deprive Section 4 (a) of all meaning. For if rates once filed become "lawful" under Section 4 (a), no matter how unjust or unreasonable they may be, and if the Commission is powerless to consider and determine whether they meet the standards of justness and reasonableness imposed by Section 4 (a), the statutory declaration of their "unlawfulness" becomes an empty phrase, and the rate payers may be left without a forum in which to challenge the lawfulness of interstate wholesale gas rates prevailing between the date of the Act's

passage and the effective date of a Commission rate-fixing order.

Even in the absence of the Natural Gas Act state regulatory commissions would appear to be without power to regulate interstate wholesale rates for natural gas. *Public Utilities Comm. of Ohio* v. *United Fuel Gas Co.*, 317 U. S. 456, 468; *Illinois Natural Gas Co.* v. *Central Illinois Public Service Co.*, 314 U. S. 498, 506; *Missouri* v. *Kansas Natural Gas Co.*, 265 U. S. 298; *Public Utilities Commission* v. *Attleboro Steam & Electric Co.*, 273 U. S. 83. It is clear, at all events that after the effective date of the Act, the state regulatory commissions do not have power to determine the lawfulness of Hope's interstate wholesale rates since "Congress by that Act * * * preempted the regulatory power over transportation and sale of natural gas in interstate commerce". *Public Utilities Comm. of Ohio* v. *United Fuel Gas Co., supra* at 466; cf. *Illinois Natural Gas Co.* v. *Central Illinois Public Service Co., supra.* While a state commission may call for data in Hope's possession to aid in determining the lawfulness of a distributor's local rates (*Public Utilities Comm. of Ohio* v. *United Fuel Gas Co., supra,* at 468, 470), this power falls short of a full-scale investigation necessary to determine the reasonableness of Hope's interstate rates.

The courts, whether state or federal, are also without power to determine the lawfulness of

interstate wholesale rates for natural gas, and, in order to maintain a uniform standard of rates, must refer proceedings involving the reasonableness of such rates to the regulatory commission concerned, for primary consideration. Cf. *Texas & Pacific Ry. Co. v. Abilene Cotton Oil Co.*, 204 U. S. 426; *Board of R. R. Comm'rs* v. *Great Northern Ry. Co.*, 281 U. S. 412, 422; *U. S. Navigation Co.* v. *Cunard S. S. Co.*, 284 U. S. 474. The determination of a question such as whether past rates were "just and reasonable" and hence "lawful" involves intricate and technical matters of fact requiring "comprehensive study of an expert body continuously engaged in administrative supervision." *Board of R. R. Comm'rs* v. *Great Northern Ry. Co.*, *supra*, at 422; *Great Northern Ry. Co.* v. *Merchants Elevator Co.*, 259 U. S. 285, 291. Jurisdiction in the courts or in a state regulatory body over these issues would pave the way for inconsistent adjudications by a variety of tribunals—the very "confusion of functions" which the Act was designed to avoid (*Public Utilities Comm. of Ohio* v. *United Fuel Gas Co.*, *supra*, at 467), and which this Court long ago condemned in the *Abilene* case, *supra*, at 440.

On the other hand, recognition of the Commission's jurisdiction to determine the lawfulness of interstate wholesale rates charged since the effective date of the Act will effectuate the Congres-

sional objective of "a harmonious, dual system of regulation of the natural gas industry—federal and state regulatory bodies operating side by side, each active in its own sphere. See H. Rep. No. 2651, 74th Cong., 2d Sess., pp. 1–3; H. Rep. No. 709, 75th Cong., 1st Sess., pp. 1–4; Sen. Rep. No. 1162, 75th Cong., 1st Sess." *Public Utilities Comm. of Ohio* v. *United Fuel Gas Co.*, *supra*, at 467.

The lower court's rationale that because the Commisison lacks authority to award reparations it may not inquire into the lawfulness of past rates (R. IV, 200–202) conflicts sharply with the decisions of this Court. Thus, the lack of power in the Interstate Commerce Commission to grant reparations for intrastate rates charged and collected which discriminated unduly against interstate commerce does not deprive it of power "to inquire whether injustice had been done and to make report accordingly" to the District Court where a shipper's suit for restitution was pending. *Atlantic Coast Line Co.* v. *Florida*, 295 U. S. 301, at 312. And in *United States* v. *Morgan*, 307 U. S. 183, proceedings for the distribution of the fund collected under an invalid order of the Secretary of Agriculture were restrained pending a determination by the Secretary of the just and reasonable rates during the period covered by the fund. This Court pointed out that the lack of authority in the

Secretary to award reparation in that proceeding did not affect his power to investigate and decide the reasonableness of past rates. *United States* v. *Morgan, supra,* at 192.

While we believe the conclusion would be the same if the findings in question were made by the Commission on its own motion, they take on additional significance from the fact that the Cities of Cleveland and Akron had expressly requested an investigation as to the lawfulness of these past rates, to afford the Public Utilities Commission of Ohio a basis for determining reasonable rates charged by East Ohio to its intrastate customers. Cf. *United States* v. *Morgan, supra,* at 193.

For these reasons, we submit that the findings as to past rates were well within the Commission's statutory powers.

C. THE COMMISSION'S FINDINGS THAT PAST RATES WERE UNREASONABLE ARE SUPPORTED BY SUBSTANTIAL EVIDENCE AND ARE OTHERWISE PROPER

No extended argument is warranted to demonstate the propriety of the findings on past rates, considered as a rate-making determination. The Commission adopted the same principles for its "Findings as to Lawfulness of Past Rates" as it did in fixing rates for the future, and the constitutional and statutory validity of those principles has already been discussed. To the extent that the court below condemned the findings for the

reasons which led it to overturn the Commission's order prescribing rates, we suggest that the court's action was erroneous for the reasons already stated.

The court below, however, also advanced the objection that the Commission, in formulating its findings as to past rates, had used actual experience as to Hope's expenses rather than reasonable estimates of expenses based on prior experience (R. IV, 200, 202). We believe that this ruling was erroneous.

In making its findings as to past rates, the Commission employed Hope's actual experience as to expenses and sales for 1939 and for each of the subsequent years. While a forecast may be requisite when the reasonable operation of future rates is in question, it is impossible to conceive of a sounder test for determining whether rates were more reasonable and lawful in the past than the actual operating experience of the Company during the years in question. Indeed, as this Court has held, it would have been arbitrary for the Commission to prefer prophecy to a survey when the actual facts were available. *West Ohio Gas Co.* v. *Public Utilities Commission*, 294 U. S. 63, 79, 82. The lower court's observation that it is "impractical to conduct a wholesale natural-gas business on the basis of annual changes in rates" (R. IV, 203) overlooks the fact that many whole-

sale contracts for utility service provide for the annual adjustment of rates. As a rule, a utility has only a few wholesale customers, and when the major customers, like Hope's, are its affiliates the periodic change in rates is facilitated. Following the practice of the utilities in each case, provision has been made by regulatory bodies for periodic changes in wholesale rates. *Re Chicago District Electric Generating Corp.*, 39 P. U. R. (N. S.) 263, 281; *Re Safe Harbor Water Power Corp.*, 34 P. U. R. (N. S.) 236, 247.

In finding the lawful rates for 1939, 1940, 1941, and up to the date of the Commission's order fixing rates for the future, the Commission determined the investment base for each period, and allowed a 6½% rate of return thereon, in addition to all operating expenses plus the amount of tax required under lawful rates (R. I, 11–13). It was only the excess over this liberal allowance which the Commission found to be the result of excessive and unreasonable charges, a method which can hardly be deemed unreasonable or arbitrary.

There is substantial evidence to support each basic and ultimate finding made by the Commission as to the lawfulness of past rates (R. I, 225–341, 373–390; R. III, 25–81, 173–201, 224–365, 373–394, 397–489), and we submit that the findings are entitled to the finality provided for by Section 19 (b) of the Act.

## CONCLUSION

For the foregoing reasons, it is respectfully submitted that the judgment below should be reversed.

## APPENDIX A

The pertinent provisions of the Natural Gas Act of 1938, c. 556, 52 Stat. 821 (15 U. S. C. § 717) are as follows:

SECTION 1. (a) As disclosed in reports of the Federal Trade Commission made pursuant to S. Res. 83 (Seventieth Congress, first session) and other reports made pursuant to the authority of Congress, it is hereby declared that the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest, and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest.

(b) The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.

SEC. 2. When used in this Act, unless the context otherwise requires—

(1) "Person" includes an individual or a corporation.

(2) "Corporation" includes any corporation, joint-stock company, partnership, association, business trust, organized group of

persons, whether incorporated or not, receiver or receivers, trustee or trustees of any of the foregoing, but shall not include municipalities as hereinafter defined.

(3) "Municipality" means a city, county, or other political subdivision or agency of a State.

(4) "State" means a State admitted to the Union, the District of Columbia, and any organized Territory of the United States.

(5) "Natural gas" means either natural gas unmixed, or any mixture of natural and artificial gas.

(6) "Natural-gas company" means a person engaged in the transportation of natural gas in interstate commerce, or the sale in interstate commerce of such gas for resale.

(7) "Interstate commerce" means commerce between any point in a State and any point outside thereof, or between points within the same State but through any place outside thereof, but only insofar as such commerce takes place within the United States.

(8) "State commission" means the regulatory body of the State or municipality having jurisdiction to regulate rates and charges for the sale of natural gas to consumers within the State or municipality.

(9) "Commission" and "Commissioner" means the Federal Power Commission, and a member thereof, respectively.

* * * * *

RATES AND CHARGES; SCHEDULES; SUSPENSION OF NEW RATES

SEC. 4. (a) All rates and charges made, demanded, or received by any natural-gas company for or in connection with the

transportation or sale of natural gas subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges, shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful.

(b) No natural-gas company shall, with respect to any transportation or sale of natural gas subject to the jurisdiction of the Commission, (1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.

(c) Under such rules and regulations as the Commission may prescribe, every natural-gas company shall file with the Commission, within such time (not less than sixty days from the date this Act takes effect) and in such form as the Commission may designate, and shall keep open in convenient form and place for public inspection, schedules showing all rates and charges for any transportation or sale subject to the jurisdiction of the Commission, and the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services.

* * * * *

FIXING RATES AND CHARGES; DETERMINATION OF COST OF PRODUCTION OR TRANSPORTATION

SEC. 5. (a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, municipality,

State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however,* That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates.

(b) The Commission upon its own motion, or upon the request of any State commission, whenever it can do so without prejudice to the efficient and proper conduct of its affairs, may investigate and determine the cost of the production or transportation of natural gas by a natural-gas company in cases where the Commission has no authority to establish a rate governing the transportation or sale of such natural gas.

ASCERTAINMENT OF COST OF PROPERTY

SEC. 6. (a) The Commission may investigate and ascertain the actual legitimate cost

of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction.

* * * * *

ACCOUNTS, RECORDS, AND MEMORANDA

SEC. 8. (a) Every natural-gas company shall make, keep, and preserve for such periods, such accounts, records of cost-accounting procedures, correspondence, memoranda, papers, books, and other records as the Commission may by rules and regulations prescribe as necessary or appropriate for purposes of the administration of this Act: *Provided, however,* That nothing in this Act shall relieve any such natural gas company from keeping any accounts, memoranda, or records which such natural-gas company may be required to keep by or under authority of the laws of any State. The Commission may prescribe a system of accounts to be kept by such natural-gas companies, and may classify such natural-gas companies and prescribe a system of accounts for each class. The Commission, after notice and opportunity for hearing, may determine by order the accounts in which particular outlays or receipts shall be entered, charged, or credited. The burden of proof to justify every accounting entry

questioned by the Commission shall be on the person making, authorizing, or requiring such entry, and the Commission may suspend a charge or credit pending submission of satisfactory proof in support thereof.

* * * * *

RATES OF DEPRECIATION

SEC. 9. (a) The Commission may, after hearing, require natural-gas companies to carry proper and adequate depreciation and amortization accounts in accordance with such rules, regulations, and forms of account as the Commission may prescribe. The Commission may from time to time ascertain and determine, and by order fix, the proper and adequate rates of depreciation and amortization of the several classes of property of each natural-gas company used or useful in the production, transportation, or sale of natural gas. Each natural-gas company shall conform its depreciation and amortization accounts to the rates so ascertained, determined, and fixed. No natural-gas company subject to the jurisdiction of the Commission shall charge to operating expenses any depreciation or amortization charges on classes of property other than those prescribed by the Commission, or charge with respect to any class of property a percentage of depreciation or amortization other than that prescribed therefor by the Commission. No such natural-gas company shall in any case include in any form under its operating or other expenses any depreciation, amortization, or other charge or expenditure included elsewhere as a depreciation or amortization charge or otherwise under its operating or

other expenses. Nothing in this section shall limit the power of a State commission to determine in the exercise of its jurisdiction, with respect to any natural-gas company, the percentage rates of depreciation or amortization to be allowed, as to any class of property of such natural-gas company, or the composite depreciation or amortization rate, for the purpose of determining rates or charges.

* * * * *

COMPLAINTS

SEC. 13. Any State, municipality, or State commission complaining of anything done or omitted to be done by any natural-gas company in contravention of the provisions of this Act may apply to the Commission by petition, which shall briefly state the facts, whereupon a statement of the complaint thus made shall be forwarded by the Commission to such natural-gas company, which shall be called upon to satisfy the complaint or to answer the same in writing within a reasonable time to be specified by the Commission.

INVESTIGATIONS BY COMMISSION; ATTENDANCE OF WITNESSES; DEPOSITIONS

SEC. 14. (a) The Commission may investigate any facts, conditions, practices, or matters which it may find necessary or proper in order to determine whether any person has violated or is about to violate any provision of this Act or any rule, regulation, or order thereunder, or to aid in the enforcement of the provisions of this Act or in prescribing rules or regulations thereunder, or in obtaining information to serve as a basis for

recommending further legislation to the Congress. The Commission may permit any person to file with it a statement in writing, under oath or otherwise, as it shall determine, as to any or all facts and circumstances concerning a matter which may be the subject of investigation. The Commission, in its discretion, may publish in the manner authorized by section 312 of the Federal Power Act, and make available to State commissions and municipalities, information concerning any such matter.

* * * * *

ADMINISTRATIVE POWERS OF COMMISSION; RULES, REGULATIONS, AND ORDERS

SEC. 16. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, amend, and rescind such orders, rules, and regulations as it may find necessary or appropriate to carry out the provisions of this Act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this Act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed. Unless a different date is specified therein, rules and regulations of the Commission shall be effective thirty days after publication in the manner which the Commission shall prescribe. Orders of the Commission shall be effective on the date and in the manner which the Commission shall prescribe. For the purposes of its rules and regulations, the Commission may classify persons and matters within its jurisdiction and prescribe different require-

ments for different classes of persons or matters. All rules and regulations of the Commission shall be filed with its secretary and shall be kept open in convenient form for public inspection and examination during reasonable business hours.

USE OF JOINT BOARDS; COOPERATION WITH STATE COMMISSIONS

SEC. 17. (a) The Commission may refer any matter arising in the administration of this Act to a board to be composed of a member or members, as determined by the Commission, from the State or each of the States affected or to be affected by such matter. Any such board shall be vested with the same power and be subject to the same duties and liabilities as in the case of a member of the Commission when designated by the Commission to hold any hearings. The action of such board shall have such force and effect and its proceedings shall be conducted in such manner as the Commission shall by regulations prescribe. The Board shall be appointed by the Commission from persons nominated by the State commission of each State affected, or by the Governor of such State if there is no State commission. Each State affected shall be entitled to the same number of representatives on the board unless the nominating power of such State waives such right. The Commission shall have discretion to reject the nominee from any State, but shall thereupon invite a new nomination from that State. The members of a board shall receive such allowances for expenses as the Commission shall provide. The Commission may, when in its discretion sufficient

551452—43——10

reason exists therefor, revoke any reference to such a board.

(b) The Commission may confer with any State commission regarding rate structures, costs, accounts, charges, practices, classifications, and regulations of natural-gas companies; and the Commission is authorized, under such rules and regulations as it shall prescribe, to hold joint hearings with any State commission in connection with any matter with respect to which the Commission is authorized to act. The Commission is authorized in the administration of this Act to avail itself of such cooperation, services, records, and facilities as may be afforded by any State commission.

(c) The Commission shall make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies. Whenever the Commission can do so without prejudice to the efficient and proper conduct of its affairs, it may, upon request from a State commission, make available to such State commission as witnesses any of its trained rate, valuation, or other experts, subject to reimbursement of the compensation and traveling expenses of such witnesses. * * *

REHEARINGS; COURT REVIEW OF ORDERS

SEC. 19. (b) Any party to a proceeding under this Act aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located

or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by sub-

stantial evidence, shall be conclusive, and its recommendation, if any, for the modification or seting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

## Tabulation of State Statutes Concerning the Accounts and the Issuance of Securities of Electric or Gas Utilities

### AUTHORITY TO REGULATE ISSUANCE OF SECURITIES

The following State statutes authorize public service commissions to regulate the issuance of securities by electric or gas utilities:

| *States* | *Statutory Reference* |
|---|---|
| Alabama | Secs. 9744-9753 Code of Ala., 1923. |
| Arizona | Sec. 708, Rev. Code of Ariz., 1928. |
| Arkansas | Act 324, Acts of Gen. Assembly of Ark., for 1935, Sects. 58 and 59. |
| California | L. 1915, Ch. 91, Sec. 52 (a). |
| Connecticut | Ch. 191, Public Acts of 1935. |
| District of Columbia | D. C. Code, T. 26, Sec. 99. |
| Georgia | Sec. 2065, 1926 Code. |
| Illinois | R. S. 1933, Ch. 111a, Sec. 35. |
| Indiana | Ch. 5, Pub. Serv. Acts, Secs. 54-503, 54-504. |
| Kansas | Sec. 66-125, Gen. Sts. of Kans., 1935. |
| Kentucky | Sec. 3359-24, Ky. Stats. |
| Maine | Sec. 41, Ch. 62, Rev. Stats. |
| Maryland | Sec. 392, Art. 23, Ann. Code of P. G. L. of Md. |
| Massachusetts | Ch. 222, Mass. Acts of 1935. |
| Michigan | Sec. 11077, Compiled Laws of 1929. |
| Missouri | Secs. 5196-5198, Rev. St., 1929. |
| Nebraska | Secs. 75-1201, C. S., 1929. |
| New Hampshire | Ch. 24, Sec. 1, P. L. of N. H. |
| New Jersey | Sec. 167-24 (e) & (f), Supp. |
| New Mexico | Sec. 18, Chap. 84 (H. B. 29) Laws 1941. |
| New York | Sec. 69, Public Service Law. |
| North Carolina | C. S. 1112 (18); Sec. 18, Ch. 307 P. L. 1933. |
| North Dakota | Sec. 4609c 20; Supp. C. L. of N. D. |
| Ohio | Secs. 614-53-54-55, Gen. Code of Ohio. |
| Oregon | Ch. 441, Ore. L. 1933. |
| Pennsylvania | Art. VI, Secs. 601-604, L. 1937. |
| Rhode Island | Ch. 2345 P. L. of 1926. |
| South Carolina | 1932 Reg. Act, Sec. 1 (i), Sec. 2 (m) & (s). |
| Tennessee | Sec. 5452 (d), Code of Tenn. |
| Vermont | Sec. 5953, P. L. Vt. Also Secs. 5991 & 6106. |
| Virginia | Ch. 160A, Secs. 4073 (1)-4073 (16). |
| Washington | Sec. 2, Ch. 540, L. 1933. |
| Wisconsin | Ch. 184, Wisc. Stats. |

The following States have no such statute:

| | |
|---|---|
| Colorado | Montana. |
| Delaware [1] | Nevada |
| Florida [2] | Oklahoma |
| Idaho | South Dakota [2] |
| Iowa [3] | Texas [2] |
| Louisiana | Utah |
| Minnesota [2] | West Virginia |
| Mississippi [2] | Wyoming |

## AUTHORITY TO PRESCRIBE UNIFORM SYSTEM OF ACCOUNTS

The following State statutes authorize public service commissions to prescribe a uniform system of accounts for electric or gas utilities:

| States | Statutory Reference | Date of First Order Adopting Uniform System of Accounts |
|---|---|---|
| Alabama | Secs. 9786-9788, Code of Ala., 1923 | February 6, 1924. |
| Arizona | Sec. 3, Const. Art. XV | 1926. |
| Arkansas | Act 324, Acts of Gen. Assembly of Ark., 1925, Secs. 22 (a) & 8 (c) | January 1, 1943. |
| California | Sec. 48, Act 6386, G. L. | January 16, 1916. |
| Colorado | Sec. 33, p. 480, L. 1913 | November 1, 1923. |
| Connecticut | Sec. 3602, Gen. Sts. Rev. 1930 | 1930. |
| District of Columbia | Sec. 32-37, T. 26, D. C. Code | October 24, 1923. |
| Georgia | Sec. 2663, Code 1926 | October 27, 1913. |
| Idaho | Sec. 59-524, —525, Id. Code Ann | 1919. |
| Illinois | Secs. 11-15, Ch. 111 2/3, R. S. 1933 | |
| Indiana | Sec. 54-209, P. S. C. Acts | May 1, 1913. |
| Kansas | Secs. 66-122, 123, R. S | October 27, 1922. |
| Kentucky | Sec. 4 (i), p. 589, L. 1934 | 1935. |
| Louisiana [1] | (See note) | |
| Maine | Secs. 17-21, Ch. 62, R. S | July 1, 1915. |
| Maryland | Sec. 388, Art. 23, Ann. Code, P. G. L. of Md. | June 12, 1911. |
| Massachusetts | Ch. 382, Mass. Acts of 1887 | 1887. |
| Michigan | Sec. 11098, Ch. 209, C. L. | December 18, 1914. |

[1] The Louisiana Commission advises that it has adopted the gas and electric systems of accounts prescribed by the National Association of Railroad and Utilities Commissioners which systems of accounts have been used by the Louisiana Commission for a number of years.

See "State Commission Jurisdiction and Regulation of Electric and Gas Utilities" (F.P.C., Jan. 1941).

| States | Statutory Reference | Date of First Order Adopting Uniform System of Accounts |
|---|---|---|
| Missouri | Sec. 5190, Mo. Stats. Ann. | January 1, 1915. |
| Montana | Sec. 3885, Code of 1921 | 1913. |
| Nebraska | Sec. 1, Const. Art. X | None adopted. |
| Nevada | Sec. 6109, C. L. | 1923. |
| New Hemisphere | Sec. 7, Ch. 240, Public Laws | 1914 |
| New Jersey | Sec. 167-17 (d), Supp. | December 3, 1912. |
| New Mexico | Secs. 28 and 30 of P. U. Act, Chap. 84, Laws of 1941. | January 1, 1942. |

No. 34

FEDERAL POWER COMMISSION, CITY OF AKRON, AND PENNSYLVANIA PUBLIC UTILITY COMMISSION, PETITIONERS

*v.*

HOPE NATURAL GAS COMPANY

*ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE FOURTH CIRCUIT*

## SUPPLEMENT TO BRIEF FOR PETITIONERS

## EXPRESSIONS OF OPINION CONCERNING THE "FAIR VALUE" DOCTRINE OF SMYTH V. AMES AND THE RULE OF "PRUDENT INVESTMENT"

### INTRODUCTION

For more than forty years extensive discussion has revolved about the proper and practicable basis for public utility rate regulation, a discussion which has not yet been definitively terminated. The crux of the problem has been the selection of the proper formula for computing the base upon which a fair annual return and an annual depreciation allowance are to be granted in the form of rates.

At the center of the controversy have been found two opposing concepts: one adopting the "present fair value" of the utility's property as the just rate base; the other, the amount "prudently invested" by the utility in its business.

This Supplement presents materials taken from the writings of legal and economic authorities, which, in our view, thoroughly discredit the "fair-value" formula, and demonstrate that (1) it is unsound and unworkable, (2) its results are unreliable, and (3) it is unduly time-consuming and costly. The "fair value" rule has been condemned by an overwhelming weight of economic opinion, legislative investigations, progressive utility commissions and persuasive judicial opinions, and it is their verdict that the rule has been a failure in practice and is virtually useless as a guide to equitable rates.

We also present materials in this Supplement which show that none of these vices inheres in the "prudent-investment" rule, and that it is on the contrary a simple, expeditious and sound method of evolving rates which are fair to the utility, to its investors and to its customers. In the belief that it will be helpful in arriving at a valid basis for rate-making, we present a résumé of significant analyses and discussions of this problem.

## I. THE "FAIR VALUE" DOCTRINE

The need for reexamination of the "fair value" rule was succinctly stated by Mr. Gerard Henderson in a brilliant critique of public utility valuation:

> The relation between the public utility and the community cannot be expressed in

terms of a simple, quantitatively ascertainable fact, for the relation involves numerous and complex factors which depend on compromise and practical adjustment rather than on deductive logic. The whole doctrine of *Smyth* v. *Ames* rests upon a gigantic illusion. The fact which for twenty years the court has been vainly trying to find does not exist. "Fair value" must be shelved among the great juristic myths of history, with the Law of Nature and the Social Contract. As a practical concept, from which practical conclusions can be drawn, it is valueless. (Henderson, *Railway Valuation and the Courts,* 33 Harv. L. Rev. 1031, 1051.)

The overwhelming weight of economic authority in the public utility field rejects the "fair value" doctrine of *Smyth* v. *Ames.* According to Bonbright, *The Valuation of Property,* Vol. II, at p. 1081:

> The sharp disagreement among American economists as to what constitutes a proper rate base makes all the more striking their apparently unanimous agreement that, whatever this base should be, the one measure which is outlawed is the very measure which the Supreme Court has held to be controlling—namely, the "value" of the properties as of the time when the rates are under consideration. This position is not confined to those writers who support the "prudent-investment" or the "original-cost" basis of regulation and whose views are therefore most obviously opposed to the accepted legal doctrine. It is accepted no less uncompromisingly by such writers as Brown (Professor Harry Gunnison Brown) and Graham (Professor Willard J. Graham), whose defense of the replacement

> cost theory will be noted below, and by the late President Hadley, who objected to any rate control which makes the fairness of the rates depend upon the adequacy of the corporate earnings. Hadley, indeed, once remarked that he could recall but one economist who agreed with the courts in accepting "value" as a measure of the rate base, and he added that this economist was dead. (Citing President A. T. Hadley's testimony before the New York State Commission on the Revision of the Public Service Commission's Laws, Hearings, p. 730 (Albany, 1930) and his address on "The Meaning of Valuation," in 19 *Am. Econ. Rev. Supp.* 173 (March 1928).)

Professor Irston Barnes of Yale University has thus summarized the "fair value" doctrine's failures and defects:

> Judged in terms of the criteria of effective regulation, the score for fair-value is not impressive. By focusing attention on the corporation, the effects of rate control on investors are ignored or relegated to a position of secondary importance. Unearned income and undeserved losses may be visited upon consumers and investors. The present-fair-value method has not been an equitable method of regulation under the circumstances that have prevailed in the past and does not promise greater fairness for the future.
>
> * * * * *
>
> On the theoretical level, the fair-value program of regulation encounters unanswerable objections. The legal theory is accurately characterized as vague and inconsistent. The eminent-domain fallacy is found to have infected the whole body of

> regulatory thought with respect to the fair-value standard. Finally, the nature of the inquiry and the character of the evidence presented in the search for fair value are not calculated to afford a scientific or satisfactory method of rate control. (Barnes, *The Economics of Public Utility Regulation* (1942) pp. 562–3.)

Professor Robert L. Hale, of Columbia University has observed that this concept "serves merely to divert the time, attention, and funds of regulating bodies out of the proper channels into one of the most unreal fields of speculation in which the minds of metaphysicians have disported themselves since the days of medieval schoolmen." *The "Physical Value" Fallacy in Rate Cases,* 30 Yale L. J. 710 (1921).

A. THE FICTIONAL CHARACTER OF "REPRODUCTION COST"

The most serious defect in the use of present fair value, and hence of reproduction cost, in the determination of utility rates is its utter lack of precision. The idea of reproduction cost is at first blush a simple one, and might indeed be workable in the case of a property of small size and little complexity.

> The original conception of reproduction undoubtedly grew out of simple conditions, such as would be met in estimating the cost of reproducing a building or a single structure. In this case, the difference between the original cost of the building or structure and the reproduction estimate would be due wholly to change in prices of labor and materials and the change in methods of doing work. (American Society of Civil

Engineers, *Valuation of Public Utilities*, 81 Transactions (1917) p. 1362.)

The difficulty is that a utility comprises a vast amount of property which is both far-flung and exceedingly complex.

> This simplicity of condition does not obtain in the case of a great property, the actual construction of which has extended over many years, many of the plant units of which have been renewed or replaced by larger ones than were originally installed, which has undergone changes and alterations, and the history and records of which have not been kept fully and completely. In such a case the making of a complete estimate of the cost of replacement or reproduction is a very involved undertaking. (*Id., loc. cit.*)

As a result, the determination of reproduction cost is extremely difficult, but, what is worse, no two experts can reach an agreement upon the figure to be used.

> To this criticism of the vagueness of the court's rule as to valuation can be added another, namely, the practical difficulty of making any valuation at all. In every case examined, there has been a great conflict in evidence. Often, when two valuation experts have been employed by the same party, these experts have each made valuations that differed by a great amount. The difficulty seems to be that of making any accurate valuation of the various assets, tangible and intangible, that make up the plant of a modern public utility. (Howell, Ben R., *Recent Developments in the Application of the Rule of Smyth* v. *Ames in*

*Valuation Proceedings in the Federal Courts,* 3 Tex. L. Rev. 412, 432 (1924).)

This difficulty is also recognized by the Committee on Valuation of the American Society of Civil Engineers:

> The practice of those engaged in valuation work, from the beginning of such work up to the present time, has varied widely in the matter of determining the cost of reproduction. Some base such cost on existing physical conditions, others on historic conditions, and still others combine the two. Some engineers have included only those physical property units which were actually created in the construction of the property, that is, they have used historic conditions, as to items of cost, with present-day prices for labor and material. Others have used substitute units, or historic prices, or original instead of present methods of work, and still others have used original conditions, original prices, and original methods, in making an estimate of reproduction cost.
>
> This failure of engineers engaged in valuation practice to agree on a uniform conception of reproduction has cast some doubt on the real worth of Cost of Reproduction as one of the measures of value. (American Society of Civil Engineers, *Valuation of Public Utilities,* 81 Transactions (1917), p. 1359.)

The "irrationality" and "unworkability" of reproduction cost estimates have thus been described:

> For as soon as we begin to deal with reproduction cost we desert the solid ground of fact and enter the realm of guesswork and

> partisan interpretation. The determination of the cost of reproducing a given property for the purpose of fixing a rate base has come to be one of the most involved and expensive tasks in the utility business. It requires a battery of engineers and accountants working months at a time and coming to conclusions with which no other like group working independently would agree.
>
> * * * * *
>
> * * * if reproduction costs are to be figured on the cost of the identical plant, a plant that would not be reproduced under any modern conditions, equipped with machinery that could not be procured in any market, and for which price lists are no longer available, as has proved to be the case, we find ourselves in an unreal world, where the imagination and ingenuity of acquisitive spirits are given a free and untrammeled rein. The irrationality and the unworkability of this legal fiction of fair value, embodying the accepted theory of reproduction cost new, becomes the more apparent the more one familiarizes himself with the processes that have been devised in its name. (Mosher & Crawford, *Public Utility Regulation*, pp. 192–3, 214.)

A classical example of the wide variations in determining fair value under the reproduction cost theory is contained in the dissenting opinion of Mr. Justice Stone in *West* v. *Chesapeake & Potomac Telephone Company*, 295 U. S. 662, 691, note 7. The reference shows the following variations in results obtained by engineering appraisals of the telephone property involved in *New York Telephone Company* v. *Prendergast*, 36 F. (2d)

54—variations covering a range of almost $250,000,000:

| Estimating body | Valuation | Increase over the Commission valuation |
|---|---|---|
| | | *Percent* |
| Majority of Commission | $396,915,493 | |
| Statutory Court | 397,207,925 | 8.2 |
| Minority of Commission | 405,502,993 | 10.5 |
| Master's report | 518,109,584 | 41.2 |
| Company claim based on Whittemore appraisal | 528,753,738 | 44.1 |
| Company claim based on Stone & Webster appraisal | 615,000,000 | 67.1 |

Another striking variation of estimates occurred in the *Indiana Telephone Case:*

> A typical instance of this difficulty is seen in the case of *Indiana Bell Telephone Co. v. Public Service Commission* [300 Fed. 190], in which there was a difference of $4,000,000 between the estimates of two of the commission's engineers. In this same case the difference between the highest valuation offered and the lowest was $19,000,000, or 45 percent of the highest estimate. Experts, working in good faith and including the same items of valuation, arrive at results so far apart as to prove that such proceedings are of little value in determining the true worth of the property. It can thus be seen that, although the courts are working out the elements, or items, that form a proper basis for valuation, the value to be given these items can never be determined with any degree of certainty. The best that can be said for the valuation of public utilities under the present method is that the courts have by their guesses as to the correctness of the expert's guesses, made another guess as to the probable value of the utility in question as a basis for the determination of a rate which will assure a fair return on

the investment. (Howell, *op cit.*, p. 6, at p. 432.)

It is common knowledge that no two field parties will arrive at the same inventory of physical quantities, and it is likewise common knowledge that a recheck by one field party of the work of another always discloses discrepancies. An analysis and comparison of reproduction-cost estimates utilized in a large number of rate cases reveals a startling variation between company and commission as to the value of the same property, the latter's in some instances being little more than half of the company's (see Appendix *infra*, pp. 91–103). These discrepancies are not avoided by experts, for in attempting to determine cost of reproduction new, there are possible variations of as much as 100 percent between the estimates of engineers testifying on behalf of a utility and that of commission experts. (Richberg, *A Permanent Basis for Rate Regulation*, 31 Yale L. J. 263, 269 (1922).)

In analyzing *McCardle* v. *Indianapolis Water Co.*, 272 U. S. 400, valuation for rate-making purposes, one commentator has observed:

> In addition to the expert guessing contest involved in estimating reproduction cost, according to present or past prices, the opinion also adds an additional gambling factor in requiring "an honest and intelligent forecast as to probable price and wage levels during a reasonable period in the immediate future." For at least one hundred years (and probably for several thousand years) commerce has been offering its greatest prizes to men who could make honest and intelligent forecasts of

> future prices. Today the management of any large business would pour wealth into the lap of the inspired genius who could make such forecasts. The question is presented as to whether, when such forecasts are impossible (as they are most of the time), public utility commissions should make any effort to regulate public utility rates. Relying upon past prices alone, it would become evident in practically every case, by the time the case reached the Supreme Court, that there had not been an "honest and intelligent forecast" of future prices. The illusion * * * that a reliable forecast of future prices can be made, is on a par with the illusion which also radiates from the opinion, that there is such a thing as a "relatively permanent price level." (Richberg, *Value—By Judicial Fiat* (1927), 40 Harv. L. Rev. 567, 572.)

Speaking of reproduction-cost estimates of the Interstate Commerce Commission, Professor Sharfman has said:

> It must be evident from the foregoing analysis that it would be the simplest of tasks to point out numerous sources of possible error and miscalculations; there are scores of items concerning which equally competent judgments might produce widely divergent results. Final figures so painfully precise, and yet built upon an hypothesis so markedly unreal, are almost ludicrous in their exactness. Even with conjecture reduced to a minimum, the results are still too conjectural to be altogether acceptable as objective findings. * * * The shortcomings of the results spring from the inherent nature of the reproduction-cost

> method, rather than from any want of skill or reasonableness in its practical application. It must be borne in mind, too, that the Commission had no alternative in the matter of ascertaining and reporting reproduction costs—this task was specifically imposed upon it by the terms of the Valuation Act. (Sharfman, *The Interstate Commerce Commission*, Vol. III–A, p. 185.)

The effect of the indefiniteness of the concept of reproduction cost is that the rate basis is entirely unpredictable. The utility and the regulatory commission are, until the final decision, entirely in the dark, and so is the investor. It is for this reason, among others, that Professor Robert Hale urges the abandonment of the rule of *Smyth* v. *Ames*.

> The time now seems ripe for the Court to overrule *Smyth* v. *Ames* and to repudiate the principles that the rate-making power is subject to limitations pertinent only to the power of eminent domain, and that rates, to be valid, must yield a fair return on "value." It would seem to the present writer desirable if, in a case presenting the issue, the Court should expressly declare (what it held in effect in the *Lindheimer* case) that rates which enable the company to operate successfully and to raise the necessary money (which they do if they yield a fair return on the actual prudent cost), are valid, quite regardless of what return they yield on a "value" in the determination of which reproduction cost plays a part. This does not mean that it would be desirable for the Court to substitute for the rule in *Smyth* v. *Ames*, a requirement that rates must in all cases yield a fair return

on actual prudent cost. A state's policy which fixes rates on that basis cannot be pronounced the only one that is not "arbitrary." The line between those rate regulations that are arbitrary and those that are not, like the line between other valid and invalid exercises of the police power, can better be left to be pricked out as future occasions arise. But counsel could at least advise clients that the validity of particular rates will be determined with reference to facts pertinent to realities. As the decisions now stand, they cannot advise whether the determination will be made with reference to such facts (as in the *Lindheimer* case), or with reference to so-called values in the determination of which no prediction can be made of the weight which the Court will attach to the various elements of actual cost, replacement cost and "going value." They cannot advise whether a company's prosperous condition will be taken as evidence of the adequacy of its rates (as in the *Lindheimer* case), or as evidence of large "going value" whose existence proves the rates to be inadequate (as in the *McCardle* case); nor whether the good physical condition of the company's property will be taken to show that the annual depreciation allowance is excessive and that the rates may accordingly be reduced (as in the *Lindheimer* case), or to show that the "present value" is high and the rates accordingly "confiscatory" (as in *Board of Public Utility Commissioners* v. *New York Telephone Co.*). Certainly *all* of the conflicting decisions of yesterday cannot be the law of today. (Hale, Robert L., *Conflicting Judicial Criteria of Utility Rates—The Need for a Judicial Restatement*, 38 Columbia L. Rev. 959, 976, 977 (1938).)

The unlimited scope afforded the imagination by reproduction-cost is graphically related by Carl I. Wheat, a practitioner with broad experience:

> Indeed, when it comes to the actual process of arriving at such a figure for a public utility system, as this "reproduction cost" process has been built up in recent rate cases, those who prefer to keep their feet on sound ground must part company with the so-called "experts." In contrast to the realistic approach to the problem, we discover that under this second approach there has been erected a great structure of imaginary and imaginative potential and hypothetical "costs," totally unrelated to reality. And the argument is made that this is what the Supreme Court really meant by its use of the term "present cost." Here, indeed, we discover the *ignis fatuus* of "valuation."
>
> It is on this second premise that the "experts" assert the necessity for including the various unreal elements above mentioned, *i. e.*, the nonexistence of the existing plant, the coming to town of a promoter, his speeches to the local clubs offering to build a plant, the excitement and delight of a receptive populace, the preparation of blueprints, the obtaining of new franchises under social, legal, and political conditions not effective when the plant was originally built, the cutting and replacing of pavement not historically cut or replaced, the cost of meeting increased traffic and city growth, and a myriad of like "difficulty factors" that were not present when the plant under consideration was actually constructed, together with divers other hypothetical costs which an actual physical "reproduction" of the property might conceivably entail.

Wheat, Carl I., *The Present as Compared With the Original Cost of Construction*, 20 Pub. Util. Fort. pp. 131, 134–135 (1937).

In the article referred to above Mr. Wheat cites a striking example of the unreality of the reproduction cost approach:

> In the Los Angeles Case the book cost of the company's properties totaled $169,000,000; the cost to "reproduce" the properties at the time of the inquiry was claimed to be $182,800,000; and the claim of "fair value" after taking into consideration admitted accrued depreciation, was $175,000,000. We are here concerned solely with the basis of the company's assertion of what it would cost to "reproduce" the properties.
>
> That figure was based upon an inventory to which certain derived "unit costs" were applied. Cross-examination of the company's witnesses disclosed that this "appraisal" included $3,171,400 to represent *the cost of cutting and replacing paving over conduits in instances where no such costs were historically incurred*, though the Supreme Court had but recently declared that "the cost in imaginary conditions of cutting and restoring pavements was not an increment of value." It further appeared that the total included $1,033,000 to represent *telephone station installations and associated drop wires which had actually been abandoned at the time of the appraisal.*
>
> Moreover, it was brought out that no less than $1,623,000 was included to represent "*left-in disconnects*," *i. e.*, telephone disconnected but left by the company, for its own convenience, on the former subscribers' premises. (Picture the imaginary promoter rushing hither and yon over the new

> system feverishly "reproducing" this large amount of already disconnected and idle equipment!) In addition, the sum of $405,500 was included to represent imaginary *organization and franchise costs in excess of those actually incurred in the development of the system*, an item that had recently been specifically disapproved by the Supreme Court. (*Op. cit.* at pp. 140–141.)

But the farthest flights of fancy within the realm of "reproduction-new" occurred in respect to a tax item and automobiles. The Telephone Company claimed $20,610 as hypothetical taxes during construction which might have had to be paid on hypothetical interest income during construction (*op. cit.*, pp. 140–141), and the method by which the utility sought to ascertain the reproduction value of automobiles is thus described by Mr. Wheat:

> Curiously enough, the urge for consistency in presenting "reproduction cost" estimates in the Los Angeles Case led the company's experts into a peculiar *cul-de-sac* when it came to automobiles. Notwithstanding the fact that the southern California used-automobile market is the largest in the United States, and that actual used-car prices are published, are fully standardized, and are readily ascertainable, the company's witnesses decided to "reproduce" its automobiles. To this end they went through the following highly illuminating process:
>
> "(1) They obtained from automobile piece-part catalogues the prices of some thirty separate parts (representing, said they, some 60 per cent of the total vehicle), (a) for the year each make and model of vehicle was purchased, and (b) for Decem-

ber 31, 1934, the date as of which the 'valuation' was being made;

"(2) They ascertained the ratio which the sum of these piece-part prices for the year of purchase bore to the sum for December 31, 1934;

"(3) They applied this ratio to the total cost of vehicles of each particular type and age, as shown on the books, and

"(4) They labeled the resulting figure 'reproduction cost new' of automobiles."

In such fashion did they obtain the "cost new" of a 1929 Ford in 1934! If such a process bears any relation to "value"—under *any* definition of that term—it is difficult to perceive it. Yet this is but one example of the lengths to which many otherwise sane men have gone when attempting to build up "reproduction cost" figures in rate cases under the second theory of its nature. (*Op. cit.* at p. 142, footnote 18.)

The National Association of Railroad and Utilities Commissioners, through its Committee on Progress in Public Utility Regulation, recently had this to say with respect to the "fair value" doctrine and the delusive element of reproduction-cost:

> For more than a generation now, utility commissions have struggled with a legalistic scheme of rate regulation based upon various types of valuation procedure. As these processes have usually been applied, they have done violence to various laws of economics. Aside from the utility field, there is virtually no other segment of American business life in which the price structure is established upon the basis of certain valuation theses. Other price structures are

> competitive, but competitive criteria are lacking in the utility field. * * * The valuation procedure, especially when based on unrealistic studies of reproduction costs, fail signally to achieve this result. Because of this fact, the entire procedure has been criticized more than it has been defended. (National Association of Railroad and Utilities Commissioners, 53rd Annual Proceedings (1941) pp. 369–370.)

There is a further factor tending to make the reproduction cost entirely unlike the expense that would be incurred if the utility were actually to be reproduced. The determination of reproduction cost involves the wholly unfounded assumption that current prices can be accurately ascertained:

> * * * As prices go upward or downward, either as to labor or materials, or as the technological processes of construction or manufacture of equipment change, the amount of the reproduction cost is immediately affected. But these are all unweighted factors, which are not accurately recorded, constantly vary, and hence cannot be determined without wide differences of opinion as to their quantitative significance. Consequently, every attempt to readjust the sum is accompanied by extended litigation, cumbersome proceedings, bulky records, and tremendous expense. (Bauer, John, *Reproduction Cost and Desirable Public Utility Regulation*, 2 Journal of Land and Public Utility Economics 408, 415 (1926).)

There are indeed several ways in which the ascertainment of current prices may be entirely false. There is not only the possibility of error which attends the determination of most economic

facts, but there is a serious danger of a fictitious price level.

> The use of "spot prices" on equipment purchased from the Western Electric Company (though the reflection of "precipitate" price changes had been frowned upon in the West Case) also enabled the utility to take advantage of a sudden recent and rather large price increase by that company, and to claim some $7,000,000 more than would have resulted from the adoption of a 5-year average pricing period (that being the "construction period" actually adopted by the company in its "reproduction cost" estimate). And this in the face of generally declining price levels in respect to almost all other commodities over that period. The fact is that such Western Electric price increases had practically no direct effect on the capital structure of the plant under consideration, since the construction program of this utility had been negligible in amount since this price increase, and in fact had been negligible in amount for some time prior thereto. Thus, by a mere scratch of the pen, the Western Electric Company (another subsidiary of the defendant utility's parent corporation) had created a basis for claims of increased "reproduction costs" totaling millions of dollars in this single case. (Wheat., *op. cit.*, p. 14, at p. 141.)

The former general counsel of the Illinois Commerce Commission likewise draws attention to the possibilities of price rigging:

> But inasmuch as the utility company is usually a prospective as well as a former customer of the manufacturer in such a

case, it is a strain on credulity to assume that the estimated price has much probative force; yet no one is in a better position to make an estimate.

The same difficulty exists, though usually in lesser degree, with quotations of prices even where the items are not obsolete, particularly where an item is a specialty of one manufacturer. An outstanding example is in the case of telephone apparatus of Bell Telephone companies. This is nearly all made by the Western Electric Company, an affiliate; and the price policy of that company has been the reverse of that necessarily followed by competitive companies. When demand falls off, as has happened during the depression, the Western Electric Company raises prices; when demand and production increase, the prices tend to fall. As a reproduction cost appraisal involves the pricing of a vastly greater amount of apparatus than is actually being produced for the Company in question, current Western Electric prices have little to do with such a situation. A somewhat similar condition seems to exist in the case of electrical apparatus made by the General Electric and other large manufacturers. Prices of much of such equipment have gone up during the depression, and the Federal Trade Commission has attacked price-fixing in some such instances. (Booth, Harry R., *Prudent Investment, Fair Value and Public Utility Regulation*, 1 National Lawyers Guild Q. 229, 240 (1938).)

In times of depression, current price data may be nebulous:

* * * The difficulty of securing adequate current price data at a time when purchases of construction materials are

> negligible or non-existent will tend to the use of older data, and thus obscure to a considerable measure the actual reduction in material costs. Reliable labor costs reflecting actual practice are difficult to obtain. (Lilienthal, David E., *Regulation of Public Utilities During the Depression*, 46 Harv. L. Rev. 745, 754 (1933).)

Shifting prices invite inflated estimates:

> The impossibility of having reproduction cost as the general basis of rate making is especially clear if we once face the fact that prices are continually shifting. * * * Among the difficulties of valuations on the reproduction cost basis, are various unjustifiable claims or applications of the theory. * * * The theory lends itself easily to various hypothetical and fanciful applications in the hands of valuation experts financially interested in forcing the results to the maximum limits. * * * [The] actual determination [of intangible construction costs] is not entirely simple, but the reproduction cost principle invites particularly the flight of fancy and their consequent inflation beyond all reason. (Bauer, *Effective Regulation of Public Utilities*, (1925) pp. 108, 131–133.)

B. THE FALLACY OF THE "COMPETITIVE PRICE THEORY"

One of the original arguments advanced in favor of the use of reproduction cost as a basis for valuation is that it tends to maintain rates such as would be charged under a system of competition. The competitive price theory has been stated by Professor Bonbright as follows:

> According to this theory, the object of public service regulation is to deprive util-

> ity companies of the power to charge a monopoly price. Rates should therefore be fixed at a level which they would probably reach if they were regulated, not by the fiat of government, but by the forces of normal competition. But under competitive conditions the prices of services and of commodities tend to equal their cost of reproduction. Therefore, under conditions of monopoly, utility prices should be made to equal the cost of reproducing the service rendered. And by cost of reproducing the service is meant the price which would just be sufficient to induce investors to put up a new plant and to give service similar to that given by the present company. (Bonbright, James C., *Depreciation and Valuation for Rate Control*, 27 Columbia L. Rev. 113, 124–125 (1927).)

From an economic standpoint there are serious flaws in the competitive price theory. It is an attempt to apply the competitive principle to a regulated monopoly by a logical *tour de force*. This is pointed out by the same authority:

> In bringing to a close this discussion of the valuation problem, the point that should be stressed above all others is the folly of attempting to regulate the prices of public monopolies so that they will conform as closely as possible to the prices that are assumed to prevail under conditions of free competition. Overlooking the fact that the proposed imitation of competition is a very poor one, overlooking the fact that a governmental control of rates designed to yield a stated return on reproduction costs is not even a good caricature of the automatic control of prices that takes place in a dynamic competitive market, we must still recognize

that the attempt to carry over into the field of the large-scale monopoly the same price system that is assumed to prevail in the field of the small competitive enterprise, is bound to result in a serious misfit. One reason why it is a misfit is that the competitive price system disregards so ruthlessly the financial needs of the individual producer. To the low-cost producer it yields profits far beyond the current rate of interest on invested capital; to the high-cost producer it brings deficits that spell bankruptcy and ruin. As long as competition is full and free this process, harsh though it be to the unfortunate producer, may serve very well the interests of the consumer. For what matters it to him that any one producer is crippled, so long as he can turn to a more fortunate rival for his necessary services and commodities? Not so under monopoly. Not so with a railway that is alone in serving a community. Why, say the defenders of reproduction cost, should railway security holders be given any greater insurance against the fluctuations of price levels than is given to the holders of securities in an unregulated enterprise? The answer is that when the investors in small competitive enterprises fall, they may fall alone, but when the holders of railway securities fall, they force the whole community to become unwilling mourners of their downfall (Bonbright, James C., *The Economic Merits of Original Cost and Reproduction Cost;* 41 Harvard L. Rev. 593, 621–622 (1928).

A variation of the competitive price idea has been advanced in support of the theory of reproduction cost. It has been contended that the utility investor will receive the benefit of a flexible income; his return will thus be relatively constant

in terms of purchasing power. Thus, it is said, as prices rise utility values will also rise, increasing the investor's receipts and protecting him from the effects of a general rise in prices. One defect in this reasoning is pointed out in a recent treatise upon the subject of regulations of utilities:

> * * * the argument that, since reproduction costs fluctuate widely this basis of valuation is more equitable, in that the fluctuations tend to parallel the fluctuations in the general commodity price level, is partly fallacious. Reproduction costs include a large percentage of labor costs, while the percentage of labor costs in the general price level may be much less. Moreover, the general price level includes the prices of many items that are not included in reproduction estimates (Wilson, Herring & Eutsler, *Public Utility Regulation* (1938) p. 127).

The assumption that the income of utility investors will be stabilized under such a rule contains a fundamental error:

> These advocates [of the reproduction cost theory] have recently shown signs of shifting their ground while yielding to attacks upon the illogical "replacement value" theory. They have urged that the investment in the dollars of bygone years should be translated into a "present investment," that is, the amount of money having the purchasing power of the dollars of yesterday in the commodities of today. The original investment, they suggest, was of a certain purchasing power which, although stated in money at the time of investment, must be restated now in terms of equivalent purchasing power. This claim involves the

plausible suggestion that owners of public utility securities should be assured a constant income in purchasing power rather than a constant income in dollars that have a fluctuating purchasing power.

One answer to this new line of argument is that the large amount of investment in public utilities is represented in securities having a fixed return, such as bonds and preferred stock. It is hardly reasonable to ask the Government to provide a fluctuating return for these investors, which they will not be able to obtain, but which will be appropriated solely for the benefit of the common-stock holders! Another answer is that it is hardly appropriate for the Government to establish a rule which will favor one class of investors at the expense of the entire community. * * * The new claim that investors should be protected against loss from the reduced purchasing power of the dollar is utterly inconsistent with the old theory of basing rates upon the "value" of the property. (Richberg, Donald R., *The Supreme Court Discusses Value*, 37 Harvard L. Rev., 289, 297–299 (1924).)

This fallacy in the reasoning of the advocates of reproduction cost is pointed out in a report by the Federal Trade Commission to the United States Senate dealing, among other things, with valuation:

> Far transcending any other reply to this argument of the proponents of reproduction cost, however, is that it entirely overlooks the fact that public utilities are almost wholly financed through fixed income-bearing securities, that is, bonds and preferred stocks. The Federal Trade Commission's investigation of the public-utility industry covering 91 representative oper-

ating companies engaged in the electric-light and gas business, shows that 70 percent of their capital accounts is represented by outstanding bonds and preferred stocks. What is of further significance is the Commisison's disclosure that write-ups of the capital assets of these 91 operating companies approximate 23 percent, substantially all of which was reflected in the equity stocks. In the light of these disclosures, it would be no serious exaggeration to say that the representative public utilities of the country, including railroads to a lesser extent, are more than 90 percent financed through fixed income-bearing securities.

Manifestly, fluctuations in the price level do not affect the man owning a $1,000 bond on which he receives 6 percent interest, so far as his dollar investment is concerned. It is clear, then, that any speculative gain or loss, due to the price level, is reflected solely in the common stocks of utilities. Yet it has not been seriously suggested by proponents of reproduction cost that all fixed income-bearing utility securities be recalled, and common stock issued in their place (Federal Trade Commission, *Summary Report to the Senate of the United States,* January 28, 1935. Senate Doc. 92, Pt. 73A, 70th Cong., 1st Sess., p. 155).

The fact is that the use of reproduction cost tends to a result precisely opposite to that which its advocates claim for it. Rates are too high after a period of inflation and too low after a period of deflation. See Willis, Hugh Evander, *Significant Changes in Public Utility Law,* 25 Georgetown L. J. 877, 884 (1937).

C. TIME-CONSUMING AND COSTLY VALUATIONS, ATTRIBUTABLE TO THE "REPRODUCTION COST" ELEMENT, HAVE RESULTED IN THE BREAK-DOWN OF RATE REGULATION

The valuation process, requiring as it does the taking of field inventories and the pricing of the inventory items, cannot be accomplished in a short space of time. Many years are frequently required and assumption upon assumption is made before the speculative result is reached. The long time required to complete a rate case has become common knowledge. The *Ohio Bell Telephone* case, 301 U. S. 292, was in process of adjudication about fourteen years. The Missouri Public Service Commission required over 8 years to reach a determination in its proceedings against the Union Electric Light and Power Company, 17 P. U. R. (N. S.) 337; and over 7 years in its proceedings against the Ozark Utilities Company, 18 P. U. R. (N. S.) 408. The North Dakota Board of Railroad Commissioners required almost 3 years in its proceedings against the Northern States Power Company, 15 P. U. R. (N. S.) 126. The New York Public Service Commission consumed at least 5 years in determining reasonable rates for the Long Island Lighting Company, 18 P. U. R. (N. S.) 65. Twenty-seven months after the initiation of its proceedings against the Westchester Lighting Company (15 P. U. R. (N. S.) 299, 318) that Commission stated:

> To continue this proceeding to completion and to fix the permanent rates would require the receipt of additional testimony and evidence on the reproduction cost new of used and useful property—probably both by the company on its own behalf and by the Commission on behalf of the public—de-

preciation with respect thereto, rate of return, as well as completion of the testimony on and possible additional evidence relating to the market value of land and going value. Judging from past experience, at least another two years would probably be consumed in the presentation of this necessary material, which in turn would require that the operating revenues, expenses, and any changes during this period be investigated and evidence presented thereon to bring them down to the date of the final determination.

In his dissenting opinion in the *McCart* case, *supra*, Mr. Justice Black included the following table to illustrate the delays in rate litigation (302 U. S. 435):

| | Bill filed | Decided | Time |
|---|---|---|---|
| United Fuel Gas Co. v. Railroad Comm'n, 278 U. S. 300 | Dec. 1923 | Jan. 1929 | 5 years |
| United Fuel Gas Co. v. Public Service Comm'n, 278 U. S. 322 | April 1925 | Jan. 1929 | 3 yrs. 8 mos. |
| Ottinger v. Brooklyn Union Gas Co., 272 U. S. 579 | June 1923 | Nov. 1926 | 3 yrs. 5 mos. |
| Ottinger v. Kings County Lighting Co., 272 U. S. 579 | June 1923 | Nov. 1926 | 3 yrs. 5 mos. |
| Ottinger v. Consolidated Gas Co., 272 U. S. 576 | June 1923 | Nov. 1926 | 3 yrs. 5 mos. |
| Patterson v. Mobile Gas Co., 271 U. S. 131 | Aug. 1922 | April 1926 | 3 yrs. 8 mos. |
| McCardle v. Indianapolis Water Co., 272 U. S. 400 | Dec. 1923 | Nov. 1926 | 2 yrs. 11 mos. |
| Average | | | 3 yrs. 7 mos. |

The delay involved in the determination of reproduction cost is illustrated by the history of the litigation in *Lindheimer* v. *Illinois Bell Telephone Company*, 292 U. S. 151. The proceedings before the Illinois Commerce Commission to determine rates for the Illinois Bell Telephone Company, initiated in September 1921, did not reach a final conclusion until 12½ years later, in 1934. More

than ten of these years were consumed in litigation in the federal courts subsequent to the Illinois Commission's findings in the case:

> * * * the first order of the Commission in the *Lindheimer* case was issued in 1923, and the hearings preceding that order must have occupied many months. It was not until 1933 that the bill in that case was dismissed. Such a length of time is extraordinary, but few utility valuations, including the length of the commission or court hearings, take less than two or three years. The result is that in a period of depression (even though the utility gives bond to insure refunds to rate-payers) consumers do not receive the benefit of rate reductions when they are most needed, and in a period of rising prices the utilities cannot receive the needed increase in rates when overheads and other costs are constantly increasing. (Note, *Public Utilities—Rate Base—Late Supreme Court Decisions*, 34 Mich. L. Rev. 100, 107 (1935).)

The *New York Telephone Company* case was instituted in 1920 and determined by the New York Public Service Commission in 1924, yet it was not until 1934 that the case was finally settled. See the concurring opinion of Mr. Justice Brandeis in *St. Joseph Stockyards Co.* v. *United States*, 298 U. S. 38, 90.

Of the *New York Telephone* case, which lasted more than ten years and included 37,000 pages of testimony and 3,000 exhibits, the following observation has been made:

> Herein lies the real significance of this case. While it may have lasted considerably longer than the average utility rate

proceeding, it is nevertheless typical of the problems and difficulties involved in all rate cases. It illustrates particularly the fact that the *measure* of return to which a utility is entitled is never clear and definite under the prevailing regulatory system. The reciprocal rights of the utilities and the public remain undefined and variable even after most exhaustive investigation. The more thorough the work, the longer it lasts and therefore the more likely it becomes obsolete before final decision.

This lack of definiteness as to the fundamental factors of rate control is the bane of the existing regulatory process. It is responsible for virtual breakdown of regulation. It creates and perpetuates conflict of interest. It produces trumped-up evidence, protracted hearings, futile appeals, prohibitive expense, and makes systematic regulation as a regular administrative process an impossibility. (Gold, Nathaniel, *An Example of Rate Litigation and Its Significance*, 23 National Municipal Rev. 584, 587 (1934).)

Another example of the devitalizing effect of the "fair value" rule is the *Wisconsin Telephone* case that consumed five years. The utility had about 200 men engaged in an appraisal for two years. The Commission's appraisal work occupied about 100 man-years. 117,266 working papers were the basis of the Commission's appraisal exhibits. The Commission accounting staff devoted about 25 man-years to its exhibits and accumulated 21,746 work sheets. The hearing required many weeks and resulted in a record of 12,106 pages of transcript and 413 exhibits. *Re Wisconsin Telephone Company*, 13 P. U. R. (N. S.) 224, 233 (1936.)

It is impossible to keep the regulatory process current under the prevailing rule, and unless that rule is changed the paralyzing delays in fixing proper rates which it makes inevitable will continue to cripple utility regulation. Many utilities in the United States have never had their property valued and others have had but one valuation in the comparatively long history of valuation in this country. This Court is familiar with the experience of the Interstate Commerce Commission in its efforts to arrive at the fair value of railroad properties in this country. During the period from 1913 to 1931, approximately $178,000,000 was expended by the Government and by Class I carriers in their attempt to carry out the valuation process. (Testimony of Mr. Alfred P. Thom, General Counsel of the American Railway Executives Association before the Committee on Interstate and Foreign Commerce of the House of Representatives, February 5, 1932.) It is common knowledge that the difficulty in the application of the rule of *Smyth* v. *Ames* to railroad valuation was in no small measure the direct cause of the amendment of Section 15a of the Interstate Commerce Act to eliminate the necessity of recurrent valuations. (See testimony of Commissioner Joseph B. Eastman before the Committee on Interstate and Foreign Commerce of the House of Representatives, January 19, 1932.)

There are over 200 natural gas companies under the jurisdiction of the Federal Power Commission with the reported book amount of gas plant exceeding two and one-half billion dollars. Most of the twelve and one-half billion dollars in electric

utility plant is within the Commission's province, and that includes several hundred separate companies. To apply "reproduction-cost" valuation to each utility would pose a staggering task.

The insurmountable burden of pricing utility inventories to estimate reproduction cost, or of trending cost at current prices for labor and material, is not confined to the Federal Power Commission. Other federal and state rate-making agencies have huge utility investments under their jurisdiction. For example, the book investment in railroads is more than 26½ billion dollars; in manufactured gas utilities it is about two billions; and in telephone utilities it exceeds five billion dollars.

Illustrative of the general trend of opinion on this subject is the following quotation of a leading authority in the field:

> * * * had the Court deliberately set out to defeat the whole purpose of regulation and to make public ownership inevitable, it could hardly have pursued this objective more effectively than by its rulings and dicta on valuation. Under the influence of these precedents, commission regulation has become so cumbersome and so ineffective that it may be said, with only slight exaggeration, to have broken down. Even the investor, on whose behalf the constitutional safeguards have been developed, has received no protection against the rebounds from the inflated stock-market prices that are stimulated by the "fair value" doctrine. (Bonbright, *The Valuation of Property*, Vol. II, p. 1154.)

The delay and expense involved in the determination of reproduction cost constitute a

serious practical obstacle to rate regulation. The time-consuming nature of the inquiry has been referred to by Henry C. Attwill, who for many years had been actively concerned with the practical aspects of rate regulation as chairman of the Massachusetts Department of Public Utilities. The valuation system, he writes,

> * * * slows up regulation and in a great measure makes it ineffective. In practice it takes so much time to decide the question of rates when it is dependent upon a valuation, that, at best, but few cases can be decided by a state authority in a year. Where the authority has a hundred or more companies under its supervision, as is usually the case, it is obvious that there can be but little regulation of their rates. Regulation, to be effective, should be reasonably prompt. If the company needs relief, it should receive it promptly; otherwise the relief prayed for may not suffice when granted, as during the time of protracted hearings the situation may be going from bad to worse and the loss must be compensated by additional increases in the rates. On the other hand, if the public is entitled to a reduction it should receive it promptly, as earnings, by the decisions of the courts, become the property of the corporation, and any excess in rates paid by the consumer can never be recovered by him. (Attwill, *Weaknesses of the Valuation System,* American Academy of Political and Social Sciences, Annals, Vol. 159 (1932) pp. 96, 98.)

A student of valuation cases writes:

> * * * an unreasonable length of time elapses before the courts are able to determine the validity of a prescribed rate.

> The *Pacific Gas and Electric Company* Case, reversed by the Supreme Court in 1924, and sent back for another valuation proceeding, has been in the courts since 1913. During that time the amount collected by the company above the rate prescribed by the city has been deposited in trust awaiting the outcome of the suit. In many other instances a period of from one to five years elapses after the publishing of a rate schedule before the validity of the rate is determined. Because changing conditions render the previous valuation of little help in determining the question of fair return after such a long time, it is often necessary to have a valuation *de novo*, with its additional expense and delay. (Howell, *Recent Developments in the Application of the Rule of Smyth* v. *Ames in Valuation Proceedings in the Federal Courts*, 3 Tex. L. Rev. 412, 431 (1935).)

See also Goddard, *The Evolution and Devolution of Public Utility Law*, 32 Mich L. Rev. 577 (1934); Lilienthal, *Regulation of Public Utilities During the Depression*, 46 Harvard L. Rev. 745 (1933); Beutel, *Due Process in Valuation of Local Utilities*, 13 Minn. L. Rev. 409 (1929); Federal Trade Commission, *Summary Report to the Senate of the United States*, January 28, 1935, Senate Doc. 92, Pt. 73–A, 70th Cong., 1st Sess., p. 154.

The lengthiness of valuation proceedings is accompanied by great expense to both sides. The utilities are prompted to engage high-priced legal, engineering, and accounting talent, and the commission must follow suit in self-protection. And what is worse, the utilities pass these expenses on to the rate payers. The rate payers are thus forced

to bear the heavy financial burden of litigating against their own interest.

> * * * As the cost to the utility in prosecuting or defending a rate case is allowed as an operating expense, this cost is eventually paid by the consumers. Thus, there is an incentive to the utility to protract the proceedings as long as possible; because, win or lose, the cost must be absorbed in the rates, and the effective date of any reduction in rates is usually postponed. (Atwill, Henry C., *Weaknesses of the Valuation System,* American Academy of Political and Social Sciences Annals, Vol. 159 (January 1932) p. 96, 98.)

The Federal Trade Commission has likewise called attention to the injustice of the burden placed upon the rate payers:

> Now, the significance of rate litigation, a particularly expensive type of legal procedure because of the expert engineering and accounting testimony upon which it depends, is that the cost of maintaining it in behalf of the companies constitutes an allowable expense of operation and must, therefore, be a determinant in the fixing of any rate estimated to allow a fair return to the utility. Thus, the expense is saddled on the rate-paying public. Furthermore, the cost of maintaining commissions and courts before whom rate cases are tried is a direct charge upon the State's tax resources, again a burden on the public. Likewise, special counsel, where used in behalf of the State or commission, and the fees of any independent experts they may feel called upon to employ, to say nothing of the not inconsiderable item, in protracted rate cases, of stenography, printing,

and miscellaneous expense are all out of the public pocketbook. What the aggregate of such sums amounts to in any one year has probably never been computed; that it is enormous goes without saying. It is not unsafe to surmise, therefore, that whatever influence lawyers, engineers, and accountants with public-utility connections can bring to bear to preserve a system representing such a source of income to them, will continue to be brought. This is particularly true while, as at present, utility holding companies supply so many of such services and are dependent upon their continuance for much of the holding company's own revenue. (*Summary Report to the Senate of the United States*, January 28, 1935, *op. cit.*, p. 34, at p. 157.)

See also, Note, *Public Utilities—Rate Base—Late Supreme Court Decisions*, 34 Mich. L. Rev. 100, 107 (1935):

> * * * Professor Riggs, an engineer with wide experience in valuation cases, states,
>
> "The subject of revaluation of large properties has become a matter of grave concern to officers charged with the management of utilities. Valuation work accurately and carefully done, in sufficient detail to satisfy the requirements of attorneys conducting rate or other cases involving valuation, is costly and time-consuming. * * * To have expended from $50,000 to $500,000 for valuation of utility property within four or five years, and then to face a new valuation to meet the needs of a new case is a serious matter in the case of any company." This expense is passed on to the rate-payers in the form of an increased allowance for overheads, and an

equal expense to the Commission is likewise passed on to the public in the form of increased appropriations for valuation work—or through the failure to hold rate hearings."

The case of *Indianapolis Water Company* v. *McCardle,* 272 U. S. 400, provides a striking illustration of the expensiveness and delay of the proceedings. The facts of the case have been summarized as follows by Beutel, *Due Process in Valuation of Local Utilities,* 13 Minn. L. Rev. 409 (1929):

> The company was comparatively small. The court, dispensing with the services of a master, heard the evidence itself. The commission, the lower court, and the majority of the Supreme Court, were agreed that the theory of reproduction was to be taken as the determining factor of value, and that 7 percent was a reasonable rate of return on the value so determined. Within seven months of the beginning of these proceedings before the commission, the company and commission, after a complete investigation by the commission's engineers, had agreed upon a valuation of the entire property involved, for bond issue purposes. This result supported in detail the valuation for rate making purposes later made by the commission and questioned in this suit. All these facts tended to simplify the case. There was no necessity of projecting return or calculating fictitious costs of production. The only point at issue was the value of the property on the reproduction theory. Thus we have here an example of a valuation case reduced to its simplest possible element, the

determination of the pure fact of value by agreed methods (pp. 424–425).

* * * * *

An examination of the record and opinions discloses that over forty different estimates of the total value of the property were offered in evidence before the commission and the courts. These estimates ranged from $8,612,399, the actual cost of the property shown by the company's books, to $25,404,026, the value claimed by Mr. Hagenah, an expert witness for the company (p. 425).

* * * * *

The proceedings in this, the simplest of cases as rate fixing cases go, started on June 8, 1923, and three years and five months later on, November 22, 1926, the Supreme Court finally reversed the commission. The investigation to compile the the evidence and the hearing of the testimony in the various tribunals consumed over a year's effort by a combined staff of experts employed by the commission and the company. The briefs and record, in greatly abbreviated form, in the Supreme Court alone had reached a total of about 700 pages which fill a bound volume approximately three inches thick, when the court, to avoid further delay, fixed the valuation (pp. 425–426).

* * * * *

Now suppose the commission on the day the Supreme Court handed down that decision had fixed rates calculated to yield 7 percent on $19,000,000, would the rate stand without a redetermination of the value of the plant? The plain answer on the theory of the case must be, *No!* The valuation is fixed as of January 1924. The rate

> necessarily must be fixed as of November 1926. The company, if it desired, could question the rates immediately, and the inquiry would have to take place in 1927 (pp. 426–427).
>
> * * * * *
>
> The only "fact" of value conclusively established is "spot" value as of 1924; but the spot has moved while the judicial process ground on. The system approved in this case demands a new determination of value, so the commission, courts, and experts must get together once more and construct a new theoretical plant on the "spot" prices of 1927. The very magnitude of the task will again cause the result to be useless. Thus, on the theory of this case, no rate can ever be set which will bind the company (p. 427). (Beutel, *Due Process in Valuation of Local Utilities*, 13 Minn. L. Rev. 409 (1929).)

Former Chairman William Prendergast of the Public Service Commission of New York has stated that the appraisal made by the New York Telephone Company cost that Company in the neighborhood of $5,000,000 (*New York Commission on Revision of Public Service Commissions Law* (1930), Vol. I, 381). It is estimated that the task of determining the fair value of all utilities subject to the jurisdiction of the Public Service Commission of New York, even with the cooperation of the utility companies and the adoption of shortcut methods, would cost about $10,000,000 and require at least three years. (Minority Report, *New York, Commission on Revision of Public Service Commissions Law* (1930), Vol. I, 394).

The expenses involved in valuation projects for rate-making purposes have been graphically de-

scribed by Harry R. Booth, former General Counsel of the Illinois Commerce Commission:

> In connection with a case recently decided by the Illinois Commerce Commission, the Illinois Bell Telephone Company stated in its annual report that it had spent $1,200,000 in preparation of a state-wide appraisal, and this was subsequent to huge expenditures in the *Chicago Telephone* case. In proceedings before the same Commission involving the Commonwealth Edison Company of Chicago, the company's expenditures totaled approximately $1,000,000, a large part of which was for appraisals; and the People's Gas Light & Coke Company, also of Chicago, spent in excess of $750,000, more than $600,000 of which was for appraisal purposes. In Missouri, two recent cases involved expenditures, mostly for appraisal purposes, of over $900,000 by the Union Electric Company and nearly $300,000 by the Laclede Gas Light Company, including the Commission's expenses in both cases. * * *
>
> By some authorities it is stated that a complete reproduction cost appraisal may be expected to cost from one-half of a percent to one percent of the reproduction cost of the property in question. Hence, for the electric, gas and telephone companies alone, which are reported in *Moody's Manual of Public Utilities* for 1937 as having a property value of over $20,000,000,000, the cost of making reproduction cost appraisals might run from $100,000,000 to $200,000,000. * * *
>
> The costs incurred by utility companies for such valuations are ordinarily charged to operating expenses, with the result that they are, in effect, paid for by the consumers.

> Costs incurred by cities and public service commissions are ordinarily paid for out of taxes, which fact, of course, exerts a distinctly discouraging influence. (Booth, *Prudent Investment, Fair Value and Public Utility Regulation,* 1 Nat. Lawyers Guild Q. 229, 235 (1938).)

The burdens of present-day rate making have been so great that commissions have frequently abandoned the attempt to secure through normal channels of regulation reductions in rates to which consumers were entitled. The New York Commission has stated:

> Consumers have appreciated that it is better to secure a reduction in rates promptly, even though it may not be as large as should be made, in their opinion, and even though it may not be as large as might be ordered by the Commission after a rate case had been conducted, extending over months and perhaps years, and possibly to be litigated in the courts. * * * It may be pointed out also that practically the Commission can cover a wider territory and deal with many more cases by negotiation than it can through formal proceedings. The latter consume far more time of the Commission and its limited staff, with the result that where negotiations with ten companies may be concluded in a few months, it would require several years to make the inventories, appraisals, accounting reports, and engineering investigations which rate cases would require. (1931 *Annual Report, New York Public Service Commission,* Vol. I, p. 8.)

The desire on the part of the commissions to achieve expeditious rate reductions benefiting the

public, coupled with the realization that the "fair value" rule equips the utilities with the means of hamstringing that objective, has led some commissions to abandon their regulatory weapons for what has been called "negotiation and wheedling." See Spurr, *Has Utility Regulation Been Reduced to Negotiation and Wheedling?* Public Utilities Fortnight, Sept. 2, 1937, p. 259.

The regulatory agencies have tried to develop short-cut methods to equitable and effective rate regulation. Some, like New York, employ the "temporary rate" procedure (*Bronx Gas and Electric Co.* v. *Maltbie*, 271 N. Y. 364, 3 N. E. (2d) 512); others have adopted the "sliding-scale" arrangement (Roberts, *How the "Sliding Scale" Reduces Rates*, Public Utilities Fortnightly, July 2, 1936, p. 2). A special committee of the National Association of Railroad and Utilities Commissioners has studied the time and expense involved in the present "fair value" process and has made recommendations for shortening rate cases and reducing the costs. (1940 and 1941 Reports on the Committee on Rates of Public Utilities, National Association of Railroad and Utilities Commissioners, 52nd Annual Proceeding, pp. 325–331, 53rd Annual Proceeding, pp. 320–323, 435–437).

Additional authorities condemning the "fair value" doctrine for rate-making purposes are: Cabot, *Public Utility Rate Regulation*, 7 Harv. Bus. Rev. 257–266 (1926); Dorety, *The Function of Reproduction Cost in Public Utility Valuation and Rate Making*, 37 Harv. L. Rev. 173 (1923); Bauer and Gold, *Public Utility Valuation* (1934).

D. "REPRODUCTION COST" IGNORES THE COST OF REPRODUCING A SERVICE

Since it is the service rendered by the utility which is the *quid pro quo* for the rates paid to it by consumers, the theory of "reproduction cost" even if otherwise admissible would logically apply to the cost of reproducing a service, not the cost of building an identical plant:

> First, the only possible argument in favor of cost of reproduction springs from the analogous use of cost of reproduction in private competitive business. * * * But the cost of reproduction so far as utilized in establishing prices in private business is not the cost of reproducing the identical property but the cost of reproducing an equally serviceable property. Or, let us say; it is the cost of reproducing the article or service, or an equally useful article or service, and never the cost of reproducing a particular plant. In truth, invention and improvement work changes in all industrial operations so rapidly that it is difficult to find any plant a few years old which would be reproduced by competent engineers in the same form today. Therefore, to utilize the idea of cost of reproduction intelligently is not to utilize the cost of reproduction of any particular property but of a service or of an equally useful service. (Richberg, Donald R., *A Permanent Basis for Rate Regulation*, 31 Yale L. J. 263, 277 (1922).)

But while an accurate application of the theory calls for ascertainment of the cost of reproducing the service, such an ascertainment is in practice impossible:

> * * * It must be apparent that such a basis for rate making would open up a new

field for speculative estimating, to the increased profit of engineers and lawyers and to the increased confusion of the courts and commissions and would bring increasing instability to all public utility operations. (*Ibid.*)

The impossibility of applying reproduction cost as it should in theory be applied was observed by Robert H. Whitten as early as 1914:

> * * * The reproduction of the service involves not only the determination of the cost of the most efficient substitute plant, but the determination of the present cost of reproducing the business, the proper allowance under present conditions for interest and profit, and the operating costs for the substitute plant. In most cases it is exceedingly difficult and expensive to determine the design of an equally efficient substitute plant. In the case of a railroad, for example, the cost of determining a substitute location and of estimating the operating costs thereon would be so great as to render it entirely impractical as a factor in rate regulation. It would require a careful survey of various available locations, and estimates of construction and operating costs. The engineering costs of such survey and estimates would be enormous.
>
> The cost of reproduction in practice, therefore, instead of meaning the cost of a substitute plant of the most modern approved design, capable of performing the same service as the existing plant, has come to mean the cost of a substantially identical reproduction of the existing plant. This is the usual method. It involves, however, a partial abandonment of the reproduction of the service theory, and a somewhat imper-

> fect recognition of the fact that cost of production is necessarily related to the past as well as to the present and future. (Whitten, Robert H., *Fair Value For Rate Purposes,* 27 Harvard L. Rev. 419, 427 (1914).)

It goes without saying that if a plant were actually to be reproduced it would be designed in a way to take advantage of possible operating efficiencies. Thus, an entirely new plant which would produce at a capacity equivalent to that of existing facilities would normally be of a different design and higher operating efficiency. In the normal course of engineering development economies would be worked out and passed on to the consumer in the form of a reduced rate, resulting from a reduction in the valuation. The purely theoretical character of the concept of reproduction cost takes no account of these operating efficiencies:

> * * * In exchange-value economics the real value of a plant is not determined by the cost of reproducing the identical plant but by the cost of producing the commodity in a new plant having the most modern equipment required to reproduce the article. No one would be willing to invest in an obsolete plant if a new one could be built to be operated at much lower operating expenses per unit of product if such a plant could be built for the same cost as the obsolete one. It is the cost of building a modern plant of similar capacity that determines the value of a plant in an unregulated competitive industry, and not the cost of reproduction of a similar plant. Hence, reproduction cost does not cause the owners of a regulated enterprise to fare the same as the investors in unregulated competitive enterprises.

> There is, furthermore, a limitation to the concept that the cost of producing the commodity in a new plant regulates the value of an old plant, since, because of technological developments, the value of such a plant would scarcely, if ever, exceed the cost of reproduction and might be considerably less. Reproduction cost, therefore, is a measure of maximum value at best. Wilson, Herring, and Eustler, *op. cit.*, p. 24, at p. 126.

The same point is made by the minority members of the New York Commission on Revision of Public Service Commission Law, who stated:

> Even if one assumes that the *value of the property,* somehow conceived, is the proper basis of rate control, it by no means follows that cost of reproducing a substantially similar plant even roughly measures that value. This fact must be evident if we take the analogy of any unregulated business property, or of an ordinary commodity used for consumption. The value of a dwelling house, for example, is not measured by the cost of producing a replica unless it may be assumed that, were the existing house destroyed, its owner would find it expedient to build another one just like it. Even more striking is the difference between the value of the assets of a growing, progressive business enterprise and their cost of reproduction. These assets, to be sure, may still be in use, and giving what would be called good service; yet many of them are not giving as good service as could be produced by the most modern type of plant and equipment, constructed in the best possible location, and adapted to existing conditions of demand

and of industrial technique. An intelligent appraiser, to be sure, might estimate the replacement cost of these properties as a starting point, but in that case he would write down the reproduction costs ruthlessly, perhaps to a mere fraction of the cost new, as a recognition of the fact that obsolescence, inadequacy, and physical depreciation have greatly impaired their present worth. This, at least, would be the practice of an appraiser who wishes to secure an honest valuation rather than a bloated statement for purposes of "dressing" the balance sheet. (Minority Report, *New York Commission on Revision of Public Service Commissions Law* (1930), Vol. I, p. 345.)

Similarly Attwill writes:

> When we know that values are required by courts to be placed upon the property of a corporation which no one in the world would pay to acquire, except for the monopoly the utility enjoys through special privileges obtained from the public, and values which usually exceed the total of the market value of the outstanding stock plus its liabilities, we know there is something wrong in this system of valuation. Mr. Justice Stone has aptly described it as a "synthetic" value. Synthetic products are seldom as good as the real thing. (*Op. cit. supra*, p. 33, at p. 99.)

Another factor which reproduction-new should, but fails to, take into account is the strong likelihood that the new plant construction will produce at a lower unit cost by reason of its operating efficiencies. Such a reduction in the operating cost should in logic and fairness be passed on to the con-

sumers since they are in fact paying for a new plant; yet the reproduction-new formula permits the high operating cost of the old plant to be superimposed on the high reproduction cost of the new:

> Even if a new plant of equal capacity were to cost more to construct, it might produce at unit costs so much less than the old plant that the additional cost of construction would be an excellent investment. In such a case it would be unfair to require the consumer to pay rates that would yield enough to pay the high operating expenses of the old plant and produce a return equal to that which would be a fair return upon the greater cost of an up-to-date plant. Yet the courts have held in numerous valuation cases that the plant, the cost of reproduction of which is to be estimated, is a plant identical with that in existence and have declared that the cost of reproduction of the plant must be considered in valuation for rate-making purposes. (Wilson, Herring, and Eustler, *Public Utility Regulation*, 1938, p. 126.)

Perhaps the most serious consequence of the reproduction-cost theory, from the standpoint of the public, is the fact that it discourages the introduction of improvements in the technology of the utility, since it permits obsolete and outmoded equipment to be included in the rate base at its high replacement cost. In the words of Attwill, the theory is "an incentive to inefficiency":

> The system makes no provision for depreciation by reason of inadequacy or obsolescence due to the change in the art. Under this rule, what incentive is there for the company, once it has absorbed the lighting and power business in its area, to

> install up-to-date equipment? If it can obtain as great a return on the old as it can on the new equipment, there is little incentive, so far as the profits of the business are concerned, to install the new. (*Attwill, op. cit. supra,* p. 33, at p. 99.)

As stated by Beutel:

> It [reproduction cost], encourages the companies in using antiquated machinery and obsolete equipment because of the increase of rates which will result from the practice of including such machinery in the valuation at prices many times greater than its original cost or present value as productive equipment. Thus, in a recent case an obsolete pumping plant that cost less than two hundred thousand and could have been replaced with modern machinery for less than three hundred thousand, was allowed a "reproduction" value of over one million dollars. (Beutel, *op. cit. supra,* p. 39, at p. 433.)

E. REPRODUCTION COST UNFAIRLY ASSESSES THE PUBLIC FOR AN UNEARNED APPRECIATION IN THE UTILITY'S VALUE

The advocates of reproduction-cost in rate valuations have urged that this formula enables the investor to realize an appreciation in the value of the utility, just as other investors holding property over a period of years may become the beneficiaries of an unearned increment. The claim is both specious and unjust.

*1. "Costless items"*

The unearned increment enjoyed by the investor in nonutility property is commonly realized by sale, but the theoretical appreciation in the utility's value is not susceptible of such pragmatic measure-

ment. Instead, it becomes an excuse for the speculative evaluation of many "costless" items:

> * * * Under the principles of valuation as hitherto established and administered by courts and commissions, "fair value" has become a means of justifying and legalizing almost every type of unearned increment, tangible and intangible, which accrues to unregulated monopoly. By the inclusion of such costless values as going value, water right values, easement values, and by the failure to make anything like complete deductions for accrued depreciation and obsolescence, companies are able to establish "values for rate-making purposes" so large that even the most prosperous and profitable enterprises make the false appearance of earning only a very limited rate of return. (Minority Report, New York Commission on Revision of Public Service Commissions' Law (1930), Vol. I, p. 251).

A literal compliance with the reproduction-cost principle indeed permits the utility to reap the profits of every type of unearned increment which accrues to monopolistic or semimonopolistic enterprises. See Report of Federal Trade Commission to the Senate of the United States on Public Utility Corporations, January 28, 1935. S. Doc. 92, Part 73A, 70th Cong., 1st Sess. The huge profits—and losses—which can be spun from the shifting of general price levels, under the delusive theory of reproduction-cost, may be gathered from the absurd results produced in the *St. Louis & O'Fallon Ry.* case. In that case the Interstate Commerce Commission demonstrated that if reproduction cost estimates were applied to all railroad property to-

talling 18 billion dollars in 1919, the "value" would have jumped to over 41 billions in 1920, only a year later. The burden on the rate payers would have increased, upon that theory, by 23 billion dollars without the investment of a single dollar by the owners. *Excess Income of St. Louis & O'Fallon Ry. Co.*, 124 I. C. C. 3, 31–32; *St. Louis & O'Fallon R. Co. v. United States*, 279 U. S. 461, 498, Brandeis, Holmes, Stone, J. J., dissenting.

*2. Unfairness to public and utilities*

The possibility of such huge speculative changes under the reproduction-cost formula can be productive of great injustice both to the public and to the utility. For under this theory, there is applied to the *reproduction* value (which includes unearned appreciation) the rate of return made on *investment* in other business undertakings of corresponding risk and uncertainty. Consequently, during periods of high price levels the rates tend to be high, placing the hardship on the consumers. Conversely, when low prices prevail, a low rate would be applied, theoretically at least, to a low base, causing hardship to the companies. If this principle were strictly adhered to in depression periods, severe and, perhaps, disastrous consequences to the utilities would inevitably ensue.

*3. Public pays for increased values which it alone caused.*

The inclusion of reproduction-cost in a rate valuation penalizes the consumer by transferring to the utility valuation the appreciation in property and equipment which is generally attributable to the efforts of the community at large, including the consumers of the utility service.

> Since the increase in value due to unearned appreciation is a creation of the community, it is manifestly unjust to require the rate-paying public to bear an enhanced burden by reason of an increment which it has created. Richberg, *A Permanent Basis for Rate Regulations,* 31 Yale L. J. 263 (1922).

Mr. Justice Black has exposed the inequity in reproduction-cost estimates:

> It is difficult to believe that such concepts of property can establish clear proof that the Constitution of the United States has been violated. Nor do I believe that, even if the people of Indianapolis and the surrounding community have permitted the Water Company to use this stream for a public service, there has been a grant of a prescriptive property right which can be capitalized by the Company, in order to exact higher water rates from the very people who granted the privilege. (*McCart v. Indianapolis Water Co.,* 302 U. S. 419, 433, Black, J., dissenting.)

A similar point has thus been stated:

> The most common argument against the use of the original-cost method of valuing public utility properties, aside from the difficulties alleged to be encountered in securing records of such costs, is that appreciations in value of property (if such exist) are denied to the owners thereof. The reproductionists, however, do not point to any rule of common equity which entitles them first to earn an adequate return on their investments and then to participate in the profits which accrue to appreciation; but they rely on certain judicial passages, which in themselves are sound, although subject to linguistic abuses when applied unadvisedly to valuations that are made

bases for rate schedules. (McCann, W. R., American Society of Civil Engineers, *op. cit.*, p. 6, at p. 1618.)

The use of a reproduction-cost basis thus enables a utility to increase the charges to the community by reason of values contributed primarily by the community. Current practice with regard to depreciation reserves provides another device for accomplishing the same result:

> * * * * It [the reproduction cost method] includes the depreciation reserve as a basis of the return, because as a practical matter it is invested in the plant. This naturally arouses hostility upon the part of the consumer. He is asked to build up an insurance fund to protect the integrity of the stockholders' investment, and then is required to pay a return upon that insurance fund in rates. This necessarily arrays the stockholders and the consumers in hostile camps, with the result that the consumer vigorously assails the provisions for depreciation. This causes vigorous assaults to be made upon the allowances for depreciation in rate controversies, with the result that public authorities are likely to allow too little for depreciation. This must be made up by larger expenditures for maintenance, or the capital of the company will eventually become impaired * * *. (Attwill, *op. cit.*, p. 33, at pp. 98–99.)

F. SOUND BUSINESS JUDGMENT FREQUENTLY DICTATES RATES WELL BELOW THE LEVEL REQUIRED BY THE "FAIR VALUE" STANDARD

The "fair value" method of rate-making has led to conclusions demonstrably unsupportable in the face of actual experience. The "fair value" of a

utility's property may be much greater than the actual cost of that property and if, under such circumstances, rates are fixed which fail to yield a "fair return" on this "fair value," those rates must be condemned as confiscatory under the doctrine of *Smyth* v. *Ames*. This would seem to be true no matter how successfully the Company may be able to operate under them, or how liberal the dividends it can pay, or how good the company's credit may be, or what return such rates may afford the Company on its investment prudently made in properties used or useful in the public service. Thus, confiscatory rates under the "fair value" test may enable a utility to operate with outstanding success because confiscation is determined by a method which has no relation to the object sought to be attained. The glaring incongruity between theoretical "fair value" and the actual facts of experience was well illustrated by *Lindheimer* v. *Illinois Bell Telephone Company*, 292 U. S. 151, in which this Court found the theory pursued irreconcilable with the actualities of operation.

No more fatal indictment can be presented against the "fair value" doctrine than that which is offered by the spectacle of successful and prosperous public utilities revealing themselves as the victims of constitutional confiscation upon the criterion of the "fair value" rule. See the dissenting opinion of Mr. Justice Black in *McCart* v. *Indianapolis Water Co.*, 302 U. S. 419, 435. When public utilities find it expedient, as they frequently do, to charge rates lower than those to which they are constitutionally entitled under the doctrine of *Smyth* v. *Ames*, they reveal the true character of the fair-value method of rate making.

Thus, it is found that utilities as a rule do not actually charge a return based upon reproduction cost:

> Chairman Cortelyou of the Consolidated Gas System, Vice President Nickerson in charge of its finances and accounts, and President Sloan of the New York Edison Company and the other electrical properties, all testified that the rates in effect were not yielding the return on the present value of the properties to which they were entitled under Federal Court decisions. In most cases they testified, the rates were not providing a fair rate of return even on actual investment. They said, however, that these rates were good business, i. e., dictated by "good business judgment," that they were in general adequate to enable the companies to obtain all the new capital required to properly service the communities, and they admitted further that the companies were able to pay good dividends on their common stock.
>
> Such testimony exposes the absurdity of the whole valuation claim which has gone so far to wreck public utility regulation. The companies are expending great sums of money and are making extreme efforts to secure rulings from the Courts to the effect that rates dictated by good business judgment and adequate to secure new capital are confiscatory under the 14th amendment to the federal constitution. Unquestionably such admissions show that the valuations of these properties could safely be reduced not only below the elaborate figures for present value built up by the engineering and accounting forces of the corporation but also below the actual investment figures on the books of the corporations. (*New York*

*Commission on Revision of Public Service Commissions Law,* Minority Report (1930) 271.)

6. SOUND UTILITY FINANCING DOES NOT NEED A FAIR-VALUE RATE BASE

There is a sharp conflict of opinion as to the respective effects of the rival valuation theories upon the market for utility securities. Passing, for the moment, the merits of the controversy, it is evident that the prevailing uncertainty as to the proper method of rate determination must have an adverse effect. This was pointed out by Robert H. Whitten:

> Investors in putting their money into public utility enterprises are entitled to know whether, in case the utility is appropriately located and normally successful, it will be permitted to earn a return on the actual and necessary investment, or upon the cost of reproduction, or upon the market or exchange value of the property, or upon a combination of these or other factors. Any arrangement might conceivably be fair to the company and fair to the public provided it were known in advance, so that reciprocal relations between risks involved and returns secured might be established, and proper methods of accounting for depreciation and appreciation instituted. For the future at least it is clearly essential that some one standard should be adopted as the normal and controlling standard in determining fair value. As to the past, the situation, while more complicated, still points to the desirability of definitely choosing some standard. (Whitten, Robert H., *Fair Value For Rate Purposes,* 27 Harv. L. Rev. 419, 420 (1914).)

The argument in favor of reproduction cost runs largely in terms of realization of unearned increment and stability of the investor's real income. These questions have been discussed above. For present purposes it will be sufficient to quote the following passage from the Federal Trade Commission's report:

> Nevertheless it is said that reproduction cost (which necessarily reflects price changes) is essential to attract capital in a competitive market at minimum rates of interest, since it is necessary to permit utility investors to take advantage of unearned increment in land and other values, in order to induce capital to flow into a regulated enterprise rather than into competitive industries. The argument is that as long as other fields of investment are permitted to hold out the lure of possible unearned increment, utilities must be free to hold out the same lure. Bonbright has pointed out, however, that investors overwhelmingly prefer security of income to opportunity for speculative gains coupled with risk of corresponding loss, as abundantly indicated by the preference of investors for bonds and other fixed interest-bearing securities rather than for common stocks. It is further indicated by the ability of the United States Government to market its bonds at rates considerably below the prevailing rates of interest without the inducement of any speculative gain. Federal Trade Commission, Report to the Senate of the United States, January 28, 1935, *op. cit., supra*, p. 34, at p. 155.

Similarly,

> It is a fair assumption that, in general, investors in establishing public utilities have

> looked to a fair return on their actual investment to compensate them for their outlay, and have not taken seriously into account any appreciation or depreciation in the value of land or in the price of labor and materials entering into the reproduction cost of structures and equipment. They have necessarily assumed that they would be able and would be permitted to receive for their service an amount equal to their actual cost of production, *i. e.*, operating expenses, depreciation, and interest and profits on their actual capital outlay. (Whitten, *op. cit., supra*, p. 56, at p. 425.)

To the same effect see Bonbright, James C., *Merits of Original Cost and Reproduction Cost*, 41 Harvard L. Rev. 593 (1928); Hale, *op. cit., supra*, p. 13, at p. 971.

A fluctuating rate of return may, indeed, attract a certain class of capital. But capital so attracted is of dubious usefulness. It represents speculative purchases of equities, a form of "investment" that the utilities and the public might well do without.

> The normal actual capital cost as a basis for rate determination, moreover, has a distinct advantage from the standpoint of public policy. It is desirable that rate schedules should have stability and should not fluctuate with the price of iron pipe or copper wire or with real-estate activity or reactions. A utility is not established for the purpose of speculating in copper wire or iron pipe or land. It must, however, in furnishing its service invest its money permanently in these things. The utility should not be expected to assume the risks of fluctuations in the price of the land and materials it uses (Whitten, *op. cit., supra*, p. 56, at p. 426).

Indeed, the speculative character of reproduction value rates is a source of serious dangers to the utilities themselves. Writing in 1921, a commentator called attention to the probable effects of a prolonged decline in prices:

> * * * it should be pointed out that we are at present quite obviously entering upon a period of declining prices and that in determining a rate base any use of figures representing the cost to reproduce the identical property will deprive public utilities in the near future of any return upon millions of dollars of actual investments which have been made in the last few years in properties which may be reproduced in the years soon to come for less than the amount of the investments which they represent. In such a time it will seem as unfair to the investor that his investment should be scaled down and that the return on his capital should be diminished because of declining price levels as it has seemed unfair to the consumer that the investor's capital should be inflated and his return increased because of rising price levels. (Richberg, Donald R., *A Permanent Basis for Rate Regulation,* 31 Yale L. J. 263, 278 (1921).)

Likewise, Bauer comments:

> The second general objection to reproduction cost is its failure to provide for proper standards of financial stability in the industries affected by regulation. It would promote speculation during one period and produce financial disintegration during another. It would, in turn, attract unnecessary capital and then retard the desirable flow.
>
> The fact is usually overlooked that by far the greater proportion of the actual investment in public utility properties has

> been made through bond and preferred stock. A reasonable estimate is that at least 75% of the cash capital was furnished by these securities, and only 25% or less by common stock. In many instances the proportion of common-stock investment is even less, and there are important cases where all the money put into the property is represented by limited return securities.
>
> Because of such normal financial structure, with the large percentage of fixed-return capital, any change in the return on the investment has a cumulative effect upon the common stock. (Bauer, *op. cit. supra*, p. 18, at p. 419.)

A fluctuating rate of return deprives conservative investors of stability, on the one hand; and it tends to imperil the financial soundness of the utility on the other hand. But the evil potentialities of the variable rate base are by no means exhausted. Much of the financial manipulation which discredits the management of utilities is directly traceable to the use of the reproduction cost base. "Undoubtedly, the stakes are high for those who control utilities through very narrow equities, offering great opportunity for speculative gain." Frankfurter, *The Public and Its Government* (1930), at p. 106.

> The doctrine of fanciful valuation has greatly encouraged recent tendencies in financial organization. In turn, the elaborate and mysterious refinements of intercorporate relations have powerfully sustained the efforts by which lawyers and engineers have built up schemes for inflated values. The search for fictitious value—at best a game of blindman's buff—is thus greatly complicated by the intricacies of elaborate

corporate arrangements within utility enterprises. Not only is there the excitement of a game fascinating to technicians in law and engineering, but in applying the prevalent judicial doctrines of utility valuation by manipulating intercorporate relations, there are the cruder but more solid temptations of buttressing unreasonable rates by law and securing huge profits through speculative utility holdings. (Frankfurter, *op. cit.*, at pp. 107–108.)

H. REPRODUCTION-COST HAS BEEN CONDEMNED BY THE GREAT MAJORITY OF REGULATORY COMMISSIONS.

A number of commissions have taken a very positive stand with respect to the controvery as to the merits of reproduction-cost versus prudent investment. Likewise, there are a number of judicial opinions which have pointed out the evils of the reproduction-cost system and protested against its continuation.

Perhaps the best exposition of the prevailing attitude of those who have been in direct contact with this problem is contained in the Minority Report of the Commission on Revision of Public Service Commissions Law of New York. The report states:

> In our opinion the greatest single weakness of the existing system of public utility regulation—and this applies not merely to New York State but to the country as a whole—lies in the hopeless difficulties inherent in the use of a physical valuation of property as the basis of rate control. Unless and until this fatal defect in regulating theory has been overcome, any attempt to revise the Public Service Law must fail to reach the root of the trouble. To a very

> large degree the other weaknesses which have been disclosed in the New York regulatory system, such as the understaffing of the Commission, the tendency of the Commission to become a purely judicial as distinct from a regulating body, and even the evils resulting from the unrestricted financial operations of holding companies are a repercussion from this more fundamental obstacle to effective control. We believe that we share this view with the great majority of impartial students of the problem and that the existing system would find almost no defenders were it not for the support which it derives from those utility companies which believe that its maintenance is in their pecuniary self-interest. (Commission on Revision of Public Service Commissions Law, New York, Minority Report (1930), p. 334.)

It has been the considered judgment of the great majority of the regulatory commissions that the use of reproduction cost is not a proper factor in the determination of a valuation. Indeed it is apparent that except insofar as the courts have compelled them to do otherwise, the commissions have tended to decline to apply the reproduction cost rule. In order to bring out the extent to which the commissions have adopted this position, we have conducted an extensive examination of the rulings of the commissions. Below are listed a selection of decisions in which it has been held that reproduction cost should not be a controlling factor:

> *Danbury* v. *Danbury & Bethel Gas & Electric Light Co.*, P. U. R. 1921D, 193, 206.
> *Re Potomac Edison Co.*, P. U. R. 1933B, 6.

A number of regulatory commissions have gone further than to condemn the use of reproduction cost as a basis for the valuation of public utilities. They have held that the prudent investment valuation of a utility is the factor that should control in the making of the rate. It must be noted that the commissions to a large extent have been forced to adopt a different theory because of the prevailing view as to the propriety of the use of reproduction cost. It seems highly probable that if reproduction cost were not forced upon the commissions by the courts, there would be wide agreement as to the merits of the prudent investment method. The following are some of the cases in which the commissions have not only rejected reproduction

cost as the basis, but have affirmatively adopted the prudent investment theory:

*Public Service Commission* v. *Pacific Telephone & Telegraph Co.*, P. U. R. 1916D 947, 955.

*Butler* v. *Lewiston A & W Street Ry. Co.*, P. U. R. 1916D, 25.

*Public Service Commission of Washington* v. *Spokane Falls Gas Light Co.*, P. U. R. 1921C, 523.

*Carlson* v. *Jamestown Telephone Co.*, P. U. R. 1920F, 645.

*Poughkeepsie & W. Falls R. Co.*, 1st Ann. Rep., New York Public Service Commission, Vol. I, p. 255 (1921).

*Cavanaugh* v. *Whitefish Municipal Water Utility*, P. U. R. 1922E, 198.

*Morris* v. *N. W. Bell Telephone Co.*, P. U R. 1922D, 769.

*Re So. Ill. Light & Power Co.*, P. U. R. 1919D, 489.

*Re Pacific Gas & Electric Co.*, 1 P. U. R. (N. S.) 1.

*Re Coast Valleys G. & E. Co.*, P. U. R. 1924C, 40.

*Re San Joaquin Light & Power Corp.*, P. U. R. 1922D, 595.

*Re Fresno Traction Co.*, P. U. R. 1925C, 566.

*Department of Public Service* v. *Grays Harbor Railway & Light Co.*, 12 P. U. R. (N. S.) 178, 200.

*Re Michigan Bell Telephone Co.*, 10 P. U. R. (N. S.) 149.

*Re Sea Cliff & G. C. Gas Co.*, P. U. R. 1921A, 211.

*Re Boise Artesian Water Co.*, 11 Ann. Rep. Idaho Public Utilities Commission 155 (1923).

*Barth V. Hughes & D. Electric Co.*, P. U. R. 1922A, 740.
*Re Midwest Power Co.*, P. U. R. 1922E, 22.

The general opinion of regulatory authorities who have passed upon the question of the proper valuation base is overwhelmingly in favor of the prudent investment as opposed to the reproduction cost method. Mr. Justice Brandeis in his concurrence in *Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 U. S. 276, pointed out that the Public Utility Reports for the years 1920 to 1923, inclusive, contain 363 cases passing upon the method of determining rate base. In 63 of these cases, reproduction cost was severely criticized or expressly repudiated. In 5 cases, reproduction cost was applied. In almost the entire remainder, reproduction-cost was either ignored or given only slight weight.

The objection to reproduction cost has been expressed as follows by a commission:

> This method (reproduction at prices prevailing at time of valuation) of determining value * * * is based upon prophecy instead of reality, and depends so much upon half-truths that it bears only a remote resemblance to facts, and rises at best, only to the plane of a dignified guess. *Danbury* v. *Danbury & Bethel Gas & Electric Light Co.* (Connecticut Public Utilities Commission, P. U. R. 1921D, 193, 206.)

This Court itself has found it an extremely difficult task to reconcile the reproduction cost method with the world of reality. Even as early as 1912, the Court expressed some doubt as to the exactness of this method. Speaking for the Court, Mr. Justice Holmes said, "Every figure that we

have set down with delusive exactness" is "speculative." *City of Louisville* v. *Cumberland Telephone and Telegraph Co.*, 225 U. S. 430, 432 (1911).

Concurring in the *Southwestern Telephone Company* case (262 U. S. at 290), Mr. Justice Brandeis said:

> The so-called rule of *Smyth* v. *Ames* is, in my opinion, legally and economically unsound. The thing devoted by the investor to the public use is not specific property, tangible and intangible, but capital embarked in the enterprise. Upon the capital so invested the federal Constitution guarantees to the utility the opportunity to earn a fair return. * * *

The Justice repeated this objection to *Smyth* v. *Ames* in his concurring opinion in *St. Joseph Stockyards Co.* v. *United States*, 298 U. S. 38.

### II. THE RULE OF PRUDENT INVESTMENT

Prudent investment as an equitable and practicable rate base has been recommended by economists, jurists, and progressive regulatory commissions. Informed opinion overwhelmingly supports the use of the investment rate base.

#### A. ADVANTAGES OF A STABLE RATE BASE

Prudent investment affords a stable rate base and simplifies rate regulation with all its accompanying advantages to investors and consumers. These have been summarized in the opinion of Mr. Justice Brandeis, concurring in the *Southwestern Bell Telephone* case, 262 U. S. 276, 289, 306:

> The adoption of the amount prudently invested as the rate base and the amount of the capital charge as the measure of the rate

> of return would give definiteness to these two factors involved in rate controversies which are now shifting and treacherous, and which render the proceedings peculiarly burdensome and largely futile. Such measures offer a basis for decision which is certain and stable. The rate base would be ascertained as a fact, not determined as matter of opinion. It would not fluctuate with the market price of labor, or materials, or money. It would not change with hard times or shifting populations. It would not be distorted by the fickle and varying judgments of appraisers, commissions, or courts. It would, when once made in respect to any utility, be fixed, for all time, subject only to increases to represent additions to plant, after allowance for the depreciation included in the annual operating charges. The wild uncertainties of the present method of fixing the rate base under the so-called rule of *Smyth* v. *Ames* would be avoided; and likewise the fluctuations which introduce into the enterprise unnecessary elements of speculation, create useless expense, and impose upon the public a heavy, unnecessary burden.

The advantages of a stable rate base from the standpoint of investors in the enterprise were thus emphasized by a committee of the Investment Bankers Association:

> So nearly as possible, a stabilized basis of property valuation should be developed. This is easier said than done, but candid effort can surely remove some of the chief causes of instabilities that are dependent on variations in commodity price levels and in varying rates of depreciation and obsolescence. Present deflation of values but emphasizes the disturbing effect of too fluc-

> tuating bases of value. To arrive at what is fair will call for mutual concessions—from public regulatory bodies, of preconceived notions that often have reflected political expediency rather than economic and basic considerations; from private ownership, of other preconceived ideas of the rights of private property in a regulated business imbued with a public responsibility and trust. Preconceived notions need to be reappraised or set aside, in favor of the answer to be found only after an unbiased solution that will more nearly represent public and private rights than any yet applied. This Committee cannot but believe that a sound economic solution will sooner or later receive judicial sanction. (*Commercial and Financial Chronicle,* November 21, 1931, Vol. 133, pt. 2, p. 3389.)

Since the early obstacles to the adoption of prudent investment have in the course of time been largely removed by the development of plant cost records and uniform systems of accounts, that standard may now be adopted because it is best suited to the requirements of regulation. Accounting and security issues of utilities have been controlled for many years. Prudent investment better assures the maintenance of equitable relations between public utilities and their customers by means of greater administrative efficiency, and at the same time promotes good service and attracts required capital.

This efficiency would come about by the narrowing of the field of controvery in rate-base matters, by shortening rate case proceedings and by reducing their cost. The quickening of the process would make more frequent review of rates pos-

sible and rate control would be converted from a spasmodic undertaking into a relatively simple, continuous and effective operation. Regulatory agencies have sought relief from the frustration accompanying the "fair value" theory by such procedures as "temporary rates," and "sliding scale rates." Moreover, public utility managerial attention would be freed of the burden which prolonged rate litigation presently involves, and a reduction in the present unwarranted cost of rate litigation and regulation would benefit the consumers and taxpayers who bear all such costs.

The prudent investment method tends better to regulate return according to the needs of a public utility as measured by its contractual interest on outstanding bonds, stipulated dividends on its preferred stock, and the return on common stock required to attract capital.[4] Most utility investors expect a limited return on an unchanging base. Bauer, *Effective Regulation of Public Utilities*, 120–126. The rate base under that method would be more closely related to those outstanding securities issued for value and the method would hold radiant prospects of a relatively stable rate. The speculative features of a high rate on high values in good times, and low rates on low values in bad times would vanish.[5] In that event, money

---

[4] Even if it be assumed that economic conditions should be reflected in the rates fixed, this may readily be accomplished by altering the flexible rate of return. See Whitten, *Fair Value for Rate Purposes*, 27 Harv. L. Rev. 419, 434–5; Richberg *A Permanent Basis for Rate Regulation*, 31 Yale L. J. 263, 273; *Div. of P. U.* v. *Narragansett Electric Co.*, 27 P. U. R. (N. S.) 106, 109.

[5] As we have observed above, if commissions adhered strictly to the present value theory in times of depression and

should be even easier in the regulatory field than it is now, for the investor is much more interested in a fairly certain return than he is in a return that fluctuates from year to year.

From the consumers' point of view, it may be pointed out that a reasonably stable rate base likewise has its advantages. It means reasonably stable rates which allow him to budget more accurately for future utility services with the assurance that future rates will not be radically different from present rates. Also, reasonably low rates invariably stimulate consumption of the utility service, thereby increasing revenues for the benefit of investors.

In expanding utilities, prudent investment is obviously responsive to changing construction costs. If the net investment is expanding 5% annually, and the average service life of the property is ten years, 77% of the prudent investment rate base would reflect construction costs of the five most recent years. Even in utilities where the net investment is fairly constant, due to retirement of property offsetting additions, the prudent investment basis would reflect prices of the five most recent years for 72.7% of the property. Bernstein, *Public Utility Rate Making and the Price Level* (1937) 123–124.

---

low prices for material and labor, the adopted rate base might be so low that the prescribed rates would drag financial distress in their wake. The public, however, has a definite interest in preventing financial distress which will impair efficient service. Bonbright, *Merits of Original Cost and Reproduction Cost*, 41 Harv. L. Rev. 593, 621–622; see Whitten, *Fair Value for Rate Purposes*, 27 Harv. L. Rev. 419, 423–424.

When rates are fixed for public utilities, they are designed to provide the annual compensation necessary to cover all current operating expenses (including wages and depreciation), current taxes and a fair rate of return on the rate base. Under the prudent investment method, therefore, all of the factors in rate-making reflect the current requirements of the utility, except the rate base which is partially current. However, it is not unreasonable to fix rates on prudent investment because such a method assures that the utility will receive a return *on* the investment (a 6½% profit above all expenses and taxes in the instant case) and a return *of* investment (through revenues to cover annual depreciation expense for property investment consumed in rendering service). If "fair value" be the description of the rate base, then prudent investment qualifies as the fairest and truest measure of value for rate-making.

The prudent investment basis promises the achievement of a sound plan for the control of utility rates. Its merits may be summarized thus: (1) the protection of the investors' interests with the corresponding encouragement to investment; and (2) the protection of the consumers' interests with the administrative simplicity of a practicable standard and the promotion of financial soundness for the maintenance of efficient service.

The prudent investment method, with its stable foundation upon facts rather than fiction, has been supported by many persons who have devoted themselves to the study of public utility regulation. The following are typical opinions:

> Since public utilities render a service which must be supplied continuously they

should be regulated upon a theory that they are or will become going concerns. They are secured in their market position by means of governmental grants which are either expressly monopolistic or tend to become such under the pressure of uneconomic competition. They have voluntarily invested their capital upon the implied assurance that they will be permitted to earn reasonable returns. Under modern conditions of regulation the investment of capital may even be compelled by governmental authorities or it is at least invested subject to governmental authorization and approval. Under these conditions of regulated monopoly, the true economic standard for determining the rate-base is the investment standard. (Glaeser, *Outlines of Public Utility Economics* (1931), p. 505.)

Our conclusion is that original cost (unimpaired investment or prudent investment) is the most satisfactory basis of valuation. (Jones, Eliot, and Bigham, *Principles of Public Utilities* (1931), pp. 239–240.)

The most widely accepted alternative to reproduction costs new is the prudent investment method of fixing fair value. * * *

* * * A stable rate base is a condition *sine qua non* of a satisfactory scheme of regulation. Prudent investment meets this condition, as does no other rate base that has been proposed. (Mosher and Crawford, *Public Utility Regulation* (1933), pp. 214, 216.

It is to be hoped that the Supreme Court will uphold the prudent investment principle and will set aside the concept of "present value" which for nearly 40 years has done much to render rate regulation ineffective. Prudent investment is a fixed,

> nonfluctuating rate base, fair to all parties concerned. It can readily be ascertained and can be kept current merely through accounting procedure. Adjustments because of changes in price levels can be made, as they should be, in the rate of return. (Wilson, Herring and Eutsler, *Public Utility Regulation* (1938) p. 152.)

Barnes considers that prudent investment affords a practical opportunity for effective regulation:

> The early obstacles to the adoption of a cost or investment standard of rate control have now been largely removed. With the extensive development of accounting control since 1908 and the more recent enlargement of commission control over security issues, the adoption of the prudent investment program would be quite practicable; the essential data are all available. In recognition of the present practicability of the prudent-investment standard, there are many decisions of the state commissions which indicate their preference for this simpler and more direct rate-making procedure. Even in those states where the adoption of the prudent-investment method of rate control is not immediately feasible, there is every reason to believe that the adoption of this standard would lead shortly to the development of the data required to make regulation on this basis truly effective. (Barnes, *The Economics of Public Utility Regulation* (1942) p. 574.)

Professor Bernstein of the University of North Carolina, an economist, has thus supported prudent investment:

> The need to simplify rate-making procedure, particularly in the determination of

fair value, must not lead to a neglect of other equally important considerations in choosing a new method of rate making. No rate-making plan can be satisfactory in the long run unless it protects the legitimate interests of the community; the interest of the investors in utility securities and of the consumers of utility services. It is necessary, therefore, that the new rate-making plan should assure to utility companies a net income that will attract the capital required for continued expansion of the utility industries. Rate making under the new plan should also be sufficiently responsive to changing economic conditions to prevent an undesirable divergence of utility rates from the costs of producing utility services.

The prudent investment method of valuation meets these tests in every respect. It is simple and definite, so that it facilitates administrative control of utility rates; and at the same time it assures to utility companies protection of their capital investment undertaken for the public convenience at the order of the rate making authority. There can be no greater stimulus to the economical provision of adequate utility capital than the assurance of the utilities commission that the investment, if prudently made, will be protected against the hazards of fortuitous price changes. At the same time, the continued retirement, replacement, and expansion of utility equipment would give considerable weight to the prices of recent years in a prudent investment valuation. Thus, the prudent investment method of determining fair value would induce continued provision of capital for utility enterprises, while maintaining a responsiveness of utility rates to changing

costs of producing utility services. (Bernstein, *Public Utility Rate Making and the Price Level,* (1937) p. 129.)

The following analysis by Bauer and Gold, well-known authorities in this field, reaches a similar conclusion:

> Standards for Proper Rate Base
>
> We shall consider particularly how "reproduction cost" or "fair value" as against "prudent investment" or "fixed rate base" would suit the purposes of effective control. The following standards are offered for the adoption of a desirable rate base and the consequent determination of return to the utilities.
>
> 1. The rate base, with the entire method of determining the return, must be capable of systematic administration.
>
> 2. It must provide for definite protection of both investors and consumers.
>
> 3. It must maintain the financial stability of the companies to the extent possible through rate control.
>
> 4. It must make available new capital as needed for public service, but prevent dislocation or distortion of capital additions.
>
> 5. It should encourage progressive development in the industries and service to the public.
>
> 6. It should provide rate flexibility for development purposes and permit accumulation of reserves in prosperous years for stabilization of rates and return when earnings decline.
>
> These standards of a rate base and method of determining return are obviously necessary for effective regulation. They are axiomatic and therefore need not be supported by analysis and demonstra-

tion. If utilities are to be regulated at all, the methods adopted should at least comply with these six standards. * * *

## Varying Versus Fixed Rate Base

The pivot of inquiry and analysis will be throughout as to whether the traditional "fair value" or a fixed rate base, or possibly some other basis, conforms the more satisfactorily to the standards presented. The point of view will be that of desirable policy considered as progressive public interest. It will include not only consumers but also investors, and more particularly collective needs and advantages of community and state.

At the outset, we may state that reproduction cost or "fair value" fails to conform satisfactorily to the first three requirements which together are involved in comprehensive administration * * * We shall show that a fixer rate base, subject to systematic engineering and accounting control, is unquestionably essential to satisfactory control. This might be modified according to the financial structure on the basis of definite price and statistical measurements, but its origin must be actual cost as properly charged under public supervision to capital account. It must rest upon definite facts that are comprehended within the plan of administration.

As to the next two requirements, which involve basic economic forces, * * * "fair value" does not appear so glaringly unsuited to public purposes, and actual cost or fixed rate base raises at least valid questions as to its desirability. We believe, however, that overbalancing advantages are with prudent investment. If it were conclusively established that a fixed rate base

runs counter to basic forces as claimed by certain economists, this would not count in favor of "fair value" but as proof that public regulation of private companies is a futile policy.

The sixth criterion is both administrative and long-run developmental. Its application depends upon a fixed rate base or exact measurements. As to all three points * * * we expect to show that a fixed rate base is not inconsistent with progress and that it is more in harmony with basic requirements than "fair value." But if all aspects of the rate base are considered, administrative and economic, we feel certain that actual cost must be adopted with possible adjustments made on a definite basis, if regulation is to be established and continued as a reasonably satisfactory policy. (Bauer and Gold, *Public Utility Valuation* (1934), pp. 371–373.)

The following quotation is from an address upon the subject of Power Control, delivered by Franklin D. Roosevelt while he was Governor of New York.

I seek to protect both the consumer and the investor. To that end I propose and advocate now, as I have proposed and advocated heretofore, the following remedies on the part of the government for the regulation and control of public utilities engaged in the power business and companies and corporations relating thereto: * * *

7. Abolishing by law the reproduction cost theory for rate making and establishing in place of it the actual money prudent investment principle as the basis of rate making. (Address of Franklin D. Roosevelt, Portland, Oregon, The Washington Post, September 22, 1932.)

Informed opinion in impressive strength has supported the prudent investment rule for effective rate-making: Bonbright, *Valuation of Property* (1937) Vol. II, p. 1155; Bonbright, *Railroad Valuation With Special Reference to the O'Fallon Decision,* 18 Am. Econ. Rev. Supp. 181 (March 1928); Bonbright, *The Economic Merits of Original Cost and Reproduction Cost,* 41 Har. L. Rev. 593 (1928); Goddard, *Public Utility Valuation;* 15 Mich. L. Rev. 205, 223; Booth, *Prudent Investment, Fair Value and Public Utility Regulation,* 1 Nat. Lawyers Guild Q. 229, 250 (1938); Richberg, *A Permanent Basis for Rate Regulation,* 31 Yale L. J. 263 (1922); Hale, *Conflicting Judicial Criteria of Utility Rates,* 38 Columbia L. Rev. 959 (1938); Riggs, *Depreciation of Public Utility Properties* (1922) pp. 61–62; Webber, *Principles of Public Utility Regulation* (1941) 123; Thompson, *Valuation For Rate-Making,* 1932, 8 J. Land and Pub. Util. Econ. 224 (1932). See: *New York Commission on Revision of Public Service Commissions Law,* Minority Report (1930) 378 et seq.; Clark, *Social Control of Business* (1926) 359; Goddard, *Fair Value of Public Utilities,* 22 Mich. L. Rev. 652, 677, 697; Kauper, *Wanted: A New Definition of the Rate Base,* 37 Mich. L. Rev. 1209; McDairmid, *An Institution Investor Scans the Utility Horizon,* Pub. Util. Fort. Oct. 14, 1937, p. 462.

B. EXPERIENCE SHOWS PRUDENT INVESTMENT TO BE PRACTICABLE AND EQUITABLE AS A RATE BASE

In 1923 Mr. Justice Brandeis, in the *Southwestern Bell Telephone* case, examined the "fair

value" doctrine in his concurring opinion, found that it was "legally and economically unsound," and proposed prudent investment as a constitutional, practicable and equitable basis for rate-making. He stated that "The thing devoted by the investor to the public use is not specific property tangible and intangible, but capital embarked in the enterprise. Upon the capital so invested the Federal Constitution guarantees to the utility the opportunity to earn a fair return." *Southwestern Bell Tel. Co.* v. *Pub. Serv. Com.*, 262 U. S. 276, 289, 290.

Commissions, informed by experience, have discussed and advocated the prudent investment basis as a sound solution to the difficulties of rate-making. During the consideration by this Court of *R. R. Commission* v. *Pacific Gas & Electric Co.*, 302 U. S. 388, the Wall Street Journal on December 28, 1937, published the results of a survey of the views of the various State regulatory commissions on the question of the "fair value" theory. The Commissions which expressed their preference were two to one in favor of the prudent investment basis as the best solution to the rate-making problem. See also, Spurr, *Has Utility Regulation Been Reduced to Negotiation and Wheedling?* Public Utilities Fortnightly, Sept. 2, 1937, p. 262.

The national organization representing 46 State regulatory commissions appointed a "Committee on Progress in the Regulation of Public Utilities" which made its report in 1942 containing the following recommendations as essential to progress in regulation (National Association of Railroad and Utilities Commissioners, Proceedings of 54th Ann. Con. 1942, p. 223):

> 1. Getting all utility books set up on a rigid original cost basis, with inflationary items written off promptly;
> 2. Use of a depreciated original cost rate base in all rate proceedings;
> 3. Use of a rate base of original cost or prudent investment less the depreciation reserve requirement or book reserve, whichever is the higher; * * * *.

The regulatory commissions have hitherto been subjected to a judicially imposed requirement of considering reproduction cost. But a body of experience has in fact been developed in the application of valuations determined without reference to reproduction cost. The public utility commissions of Massachusetts and California have, over a period of years, made use of a valuation principle which is independent of the use of reproduction cost:

> We are indeed fortunate to have the benefit of the actual experience of at least two states with the historical cost doctrine. Both the Massachusetts and California Commissions have, notwithstanding the absence of judicial support, had the courage to follow this principle through many years of regulation. More than any other state Massachusetts has been able to avoid appeal to the courts, while the California Commission's rate decisions have been sustained with few exceptions in both the state and federal courts. (Rooks, Irvin, and Booth, Harry R., *Current Problems of Public Utility Rate Regulation,* 13 Ore. L. Rev. 122, 125 (1934).)

The California Commission has adopted the prudent investment (historical cost) basis for fix-

ing utility rates for several decades and the utilities have generally acquiesced in that method, and have prospered while rendering efficient service. (National Association of Railroad and Utilities Commissioners, Proceedings of 48th Ann. Con. 1936, p. 292). In the recent *Pacific Gas* rate case the California Commission prescribed rates upon the prudent investment basis, which were sustained by the courts (302 U. S. 388; 26 F. Supp. 507), and made this statement:

> This historical method has dominated the Commission's findings for several principal reasons. It is well grounded upon established facts, is not subject to the vagaries of pet theories, unlimited imagination, and abrupt fluctuation of current prices and passing conditions, and therefore indicates a truer measure of value upon which, through the application of rates, a return may be allowed to reimburse the owner for his enterprise and insure the integrity of his capital honestly and prudently invested. At the same time it prevents unwarranted demands upon the consumer through the projection of future rates on ephemeral values and stabilizes rates so that economic shocks from such changes are reduced to a minimum.
>
> It is an economical procedure, where the books of the companies are reasonably well kept, as obtains in practically all of the major utilities of this state, full compliance with which will prevent unwarranted expenditures of money by the Commission, the public and the company, which inures to the benefit of both the consumers and the utility. It is a more rapid procedure insuring quicker compliance with necessities as they arise. (*Re Pacific Gas & Electric Co.*, 1 P. U. R. (N. S.) 1, 11–12).

For additional prudent investment announcements by the California Commission see: *Re Pacific Gas & E. Co.*, P. U. R. 1923C, 385, 405; *Re San Joaquin Light & P. Corp.*, P. U. R. 1922D, 595, 613; *Re Coast Valleys G. & E. Co.*, P. U. R. 1924C, 40, 44; *National City* v. *Sweetwater Water Corp.*, 3 P. U. R. (N. S.) 405, 412–415.

Massachusetts has successfully employed a stable rate base resting primarily on prudent investment. The former Chairman of the Commission stated:

> Our concern in Massachusetts now is that we may be forced to abandon a system of regulation that, on the whole, has worked well for nearly half a century. Financiers and economists outside of our State have asserted, with some heat and vigor, that our system is unsound economically and cannot work successfully; that it is unjust to the corporation and its stockholders, and that as capital is timid, it will not seek investment in public utilities in Massachusetts. Representatives of some of our own electric companies have sung the same song. The answer to this is that the system has been in operation for nearly fifty years; that in all that time, resort to the Federal courts has been sought by electric companies in Massachusetts but twice, both cases being abandoned; that all of the electric companies in our State are in sound financial condition, and, so far as I am aware, none have difficulty in securing the necessary capital for their developments; and that decisions on rate questions are fairly prompt, and hearings and investigations are rarely protracted. We believe that the good faith of Massachusetts can be relied upon by those who invest their capital in public serv-

> ice enterprises, as it can be relied upon by those who lend the State their money. (Attwill, *Weaknesses of the Valuation System,* American Academy of Political and Social Sciences, Annals, Vol. 159 (Jan. 1932), p. 97.)

As early as 1914 the Massachusetts Commission declared:

> * * * capital honestly and prudently invested must, under normal conditions be taken as the controlling factor in fixing the basis for computing fair and reasonable rates * * *. (*Middlesex and Boston Rate Case,* 2 Mass. P. S. C. R. 111, 112.)

For additional cases on the Massachusetts prudent investment principle see: *Bay State Rate Case,* P. U. R. 1916F, 221, 233; *Re New England Tel. & Tel. Co.,* P. U. R. 1925E, 739, 744; *Customers* v. *Worcester Light Co.,* P. U. R. 1927C, 705, 708; *Customers* v. *Northampton Electric Lighting Co.,* 36 P. U. R. (N. S.) 353, 356; see also, Webber, *Principles of Public Utility Regulation With Special Reference To Massachusetts Practice* (1941).

California and Massachusetts have been the outstanding Commissions in the application of the prudent investment principle for many years, and their experiences have demonstrated that prudent investment is a practicable and equitable method. But many other State commissions have also supported the cost or prudent investment basis. For example:

> ARKANSAS: *Arkansas Power & Light Co.* v. *McGehee,* 42 P. U. R. (N. S.) 65, 80 (1941).
> DISTRICT OF COLUMBIA: *Re Potomac Electric Power Co.,* P. U. R. 1923D, 579, 584.

IDAHO: *Re Boise Artesian Water Co.*, 11 A. R., Idaho P. U. C. 155 (1923).

*Re Puget Sound Freight Lines*, 35 P. U. R. (N. S.) 452, 455 (1940).
WISCONSIN: *Milwaukee E. R. & Light Co.* v. *Milwaukee*, P. U. R. 1918E, 1, 25–26.
*Marinette* v. *City Water Co.*, 9 P. U. R. (N. S.) 308, 316 (1934).

The leading Federal rate-making bodies have concurred with these commissions in the espousal of the original-cost method and the rejection of the reproduction-cost formula. Commissioner Eastman, of the *Interstate Commerce Commission,* has condemned the "judgment method of valuation" under *Smyth* v. *Ames* and has advocated prudent investment as the workable and just basis. *San Pedro, Los Angeles & Salt Lake R. R. Co.*, 75 I. C. C. 463, 550–557 (1923); *Excess Income of St. Louis & O'Fallon Ry. Co.*, 124 I. C. C. 3, 49–59.

The *Federal Communications Commission,* concerned with the regulation of telephone and telegraph rates, joined in the Government's brief, *amicus curiae,* in *Driscoll* v. *Edison Light & Power Company, No.* 509 October Term 1938 (307 U. S. 104). In that brief it was stated that the "fair value" rule has proved to be unsound and unworkable, and that the rule of prudent investment, combining as it does exactness, ease of application, and a proper principle for the determination of reasonable return, is the standard for rate-making best adapted to modern business conditions and practices in this country.

The *Civil Aeronautics Board,* having the duty of fixing rates for air transportation, has announced its intention to utilize the prudent investment method:

> The presentation, at the rehearing, of the reproduction costs of the carrier's property devoted to transportation service as of December 31, 1941, brings us to the question of the proper use, if any, to be made of such evidence. This Board in exercising its rate making functions has never and does not now measure the reasonableness

of the rate in terms of a fair return upon the so-called "fair value" of the property used and useful in the public service. One of the primary factors, which is frequently controlling, in determining the fair value of such property is its reproduction cost less depreciation. We believe that experience has proved such method to be administratively and economically unsound; its application to public regulated enterprise during the past four decades has placed upon State and Federal regulatory agencies a burdensome, complex, expensive and futile task. Recent opinions of members of the Supreme Court of the United States add to the weight of notable dissents by members of the Court in the past in further reducing the prestige of this rate making formula. We believe that the ascertainment of the capital cost of producing the air transportation service requires that the rate of return should be predicated upon the funds which have been actually and legitimately invested in the transportation enterprise rather than upon any valuation of the carrier's property, and we shall continue to adhere to this method in the future as we have in the past. We accordingly regard reproduction cost evidence as irrelevant and immaterial to the issue of a fair and reasonable rate and evidence of this type in the future will not be admitted to the record in rate proceedings for the purpose of showing the value of the carrier's property. (*Re American Airlines, Inc.*, Dockets Nos. 334 and 204 Civil Aeronautics Board's decision of November 12, 1942, pp. 31–32.)

The *Federal Power Commission* in performing its duty to fix reasonable interstate wholesale rates

for electricity and gas has uniformly adopted the actual cost or prudent investment basis. *Re Interstate Power Co.*, 32 P. U. R. (N. S.) 1, 11 (1939); *Re Safe Harbor Water Power Corp.*, 34 P. U. R. (N. S.) 236, 247 (1940); *Re Chicago District Electric Generating Corp.*, 39 P. U. R. (N. S.) 263, 277 (1941); *Cleveland* v. *Hope Natural Gas Co.*, 44 P. U. R. (N. S.) 1, 24 (1942); *Detroit* v. *Panhandle Eastern Pipe Line Co.*, 45 P. U. R. (N. S.) 203, 214 (1942); *Re Canadian River Gas Co.*, 43 P. U. R. (N. S.) 205, 224 (1942); *Re El Paso Natural Gas Co.*, Docket Nos. G–257, G–242, October 29, 1942 Order Reducing Rates; *Illinois Commerce Commission* v. *Natural Gas Pipeline Co.*, Docket Nos. G–109, G–112, September 19, 1942, Order Accepting Reduced Rates For Filing and Terminating Proceedings; *Re Lone Star Gas Co.*, Docket Nos. G–209, G–208, May 4, 1942, Order Reducing Rates; *Re Northern Natural Gas Co.*, 47 P. U. R. (N. S.) 74, 75 (1943); *Louisiana Public Service Commission* v. *United Gas Pipe Line Co.*, 48 P. U. R. (N. S.) 91; *Re Interstate Natural Gas Co.*, 48 P. U. R. (N. S.) 267.

This imposing weight of administrative precedent, based on a wealth of practical experience and a background of technical competence, would seem sufficient to dispel any doubts as to the rate-base which should be adopted as workable and sound. It lends the support of the expert rate-maker to the pronouncement of Justices Stone and Cardozo that the rule of prudent investment, as propounded by Justice Brandeis, "states the law as it should be." See *St. Joseph Stockyards Co.* v. *United States*, 298 U. S. 38, 93.

# SUPPLEMENT B

## SUMMARY OF COMPARISON OF REPRODUCTION COST ESTIMATES IN RATE CASES [1]

(Detail, pages 90 to 101)

| | No. of cases | Appraisal amounts | | | Percent excess of company appraisal |
|---|---|---|---|---|---|
| | | Company | City or commission | Excess of company appraisal | |
| Year 1928 | 25 | $67,495,001 | $51,965,943 | $15,529,058 | 29.88 |
| Year 1929 | 32 | 396,382,303 | 267,409,792 | 128,972,511 | 48.23 |
| Year 1930 | 18 | 185,542,529 | 138,940,783 | 46,601,746 | 33.54 |
| Year 1931 | 18 | 321,257,149 | 210,931,858 | 110,325,291 | 52.30 |
| Year 1932 | 10 | 152,413,117 | 74,320,022 | 78,093,095 | 105.08 |
| Year 1933 | 20 | 276,949,277 | 180,569,492 | 96,379,785 | 53.38 |
| Year 1934 | 8 | 69,228,539 | 43,595,083 | 25,633,456 | 58.80 |
| Year 1935 | 9 | 39,088,733 | 29,781,774 | 9,306,959 | 32.34 |
| Year 1936 | 16 | 205,171,349 | 155,231,207 | 49,940,142 | 32.17 |
| Year 1937 | 5 | 59,982,102 | 46,164,509 | 13,817,593 | 29.93 |
| Year 1938 | 5 | 171,897,333 | 148,129,198 | 23,768,135 | 16.05 |
| Year 1939 | 2 | 2,147,954 | 1,488,952 | 659,002 | 44.26 |
| Year 1940 | 4 | 170,055,853 | 126,462,956 | 43,592,897 | 34.47 |
| Year 1941 | 4 | 11,995,845 | 10,646,420 | 1,349,425 | 12.67 |
| Year 1942 | 2 | 2,133,700 | 1,767,178 | 366,522 | 20.74 |
| Total | | 2,131,740,784 | 1,487,405,167 | 644,335,617 | 43.32 |

[1] The cases shown in this appendix are all the cases reported in Public Utility Reports for the years 1928 to 1942, inclusive, for which comparable information was given.

No. 891

## BRIEF ON BEHALF OF HOPE NATURAL GAS COMPANY

**In Opposition to the Petitions for a Writ of Certiorari.**

Both of the above cases involve the same matter and we therefore file one brief.

### OPINIONS BELOW.

The opinion of the Circuit Court of Appeals (R. IV, 169-207) is now officially reported in 134 Fed. (2d) 287. The opinion of the Federal Power Commission (R. I, 16-89) is reported in 44 P. U. R. (N. S.) 1.

### STATEMENT.

We supplement the statement made by the petitioners as follows:

Hope's present natural gas properties, all in West Virginia, were constructed and put into use over a period of nearly fifty years. Approximately one-half were con-

structed prior to 1917 at a cost of about $25,000,000 and the other half since that time at a cost of about $45,000,000 (R. IV, 171). This statement of original cost totaling nearly $70,000,000 as of December 31, 1938 (Ex. 20, R. I, 167, 193) conforms to the definition of original cost of Mr. Justice Brandeis, namely, "the amount actually paid to establish the utility" (R. I, 174, 300, II, 205-206). It was determined, as he said it should be determined, "by inspection of books and vouchers, and by other direct evidence. If this class of evidence is not complete, it may be necessary to supplement it by evidence as to what was probably paid for some items, by showing prices prevailing for work and materials at the time the same were supplied." (Concurring opinion of Mr. Justice Brandeis in *State of Missouri ex rel. Southwestern Bell Telephone Company v. Public Service Commission of Missouri*, 262 U. S. 276, note at page 295; R. I, 183-189.) To the extent of 94% this original cost was shown by books, vouchers and other direct evidence. 6% was estimated (R. II, 184).

The expenditures included in this $70,000,000 actual cost admittedly showed the original cost substantially as it would have appeared on Hope's books had it kept them from the beginning of operations pursuant to the Federal Power Commission's present Uniform System of Accounts, in accordance with which all annual operating statements submitted in this case were prepared (R. I, 300).

The cost actually recorded in Hope's capital accounts on its books as of the same date, December 31, 1938, was $52,730,000 (Ex. 20, R. I, 197). The difference between these book costs and the original cost is accounted for by property items which under modern systems of accounts are required to be charged to capital but which Hope in times past charged to expense. The largest single item, about $13,000,000, represents the drilling cost of 2633 wells now in use which, prior to the effective date of the West Virginia System of Accounts in 1923, had been charged to

expense (R. I, 349, 353). Hope's book costs thus do not reflect the money actually paid to drill 2633 of the wells now in use and to construct various pipe lines, measuring stations, small buildings, telephone lines and other physical property now in use (R. I, 353).

Hope also introduced a reproduction cost new estimate as of the same date of $97,000,000 (R. III, 206) prepared by a widely experienced engineer. This estimate includes nothing for the cost of developing the business or for going concern value or for the discovery value of the great gas fields developed by Hope (Ex. 16A, R. I, 162). In other words, it includes only the estimated cost of reproducing the physical property with all gas leaseholds included at actual cost.

Hope also introduced a trended original cost which merely substituted in the original cost the 1938 prices of labor and materials in lieu of the prices prevailing at the time the construction was made. This trended original cost is $105,000,000 (Ex. 20, R. I, 193, 197), thus indicating a weighted average increase in price levels of 50% over the original cost of $70,000,000.[1]

The Commission gave no weight to any of this evidence in its finding. It ignored all evidence of the vouchers and other direct proof of the "cost to establish the utility," all evidence of present value, all judicially known facts as to the increase in price levels, and started its rate base cal-

---

[1] In a note to the Commission's petition, No. 890, at page 17, the reproduction cost new estimate of $97,000,000 and the trended original cost of $105,000,000 are contrasted with what is called the "actual legitimate" cost of $52,000,000. The correct comparison is not with $52,000,000 but with $70,000,000. Obviously the $52,000,000 does not include all or part of the cost of many items of property that are included in all of the figures used by Hope. The Public Utilities Commission of Ohio found the reproduction cost new of Hope's physical property as of June 30, 1937 to be $100,257,000, and its then present value to be $66,166,000 (Exs. A and C, p. 99, to Cleveland's "Supplement to Petition and Complaint as Amended," Docket No. G-100).

culation with the book cost of $52,730,000, adjusted for so-called accounting errors to $51,207,000 as of December 31, 1938 and to $51,957,000 as of December 31, 1940 (R. I, 36, 50). From the latter figure it deducted its estimate for accrued depletion and depreciation to arrive at $29,629,000, added allowances for working capital, useful unoperated leaseholds and net capital additions, and arrived at a rate base, for fixing future rates, totaling $33,712,000 (R. I, 50). The same physical property which appears in the Commission's rate base at $29,629,000 was valued for 1941 taxation by the State of West Virginia at over $50,000,000 (R. I, 391-393, Transcript, pp. 5431-5433, all erroneously excluded by the Commission).

The rate bases used as a basis for the Commission's action as to Hope's past rates were similarly determined.

## REASONS FOR DENYING THE WRIT.

It might have been, as the petitioners claim, a matter of great public significance if the Circuit Court of Appeals had approved the Commission's utter disregard of both present value and actual cost in fixing Hope's rates. But it did not. Instead it merely made a particular application of general principles that have repeatedly been applied by this Court.

Separately discussing the five points assigned by the petitioners for inviting review:

### I. The Commission's Right to Use a Prudent Investment Rate Base.

*(No. 890 Pet., pp. 15-19; No. 891 Pet., 11-16.)*

The Circuit Court of Appeals' reasons for its decision are fully set forth in its opinion (R. IV, 172-193) and need no repetition.

We merely call attention to the fact that its holding does not confine the Commission to any single formula or

group of formulas, that it has left the Commission free to reject estimates of reproduction cost and trended original cost or any other single formula, and free to adopt original cost or historical cost "as representing present fair value where under all the circumstances of the case it is not unreasonable to do so" (R. IV, 183-184).

The petitioners claim (No. 890 Pet., p. 15; No. 891 Pet., p. 11) that this case presents the general question of whether the Federal Power Commission "may employ the prudent investment method of rate-making." The plain fact is that the Commission did not use a "prudent investment rate base" or employ the "prudent investment method of rate-making." Its opinion does not claim to have done so. It started its rate base calculation with the approximately $52,000,000 which admittedly did not reflect the actual cost of or even all of the property presently devoted to public service. This figure in the Commission's exhibits is variously called "adjusted book cost" and "original cost" (Ex. 57, R. I, 219, 212; 265-270). In the Commission's opinion it is called "actual legitimate cost or gross plant investment" (R. I, 34-36, 50). Only in the briefs of counsel does it become "prudent investment." Actually these terms are all applied to the same figure, which is merely an incomplete adjusted book cost.

Had the rate base been determined either in accordance with the prudent investment rate-making views of Mr. Justice Brandeis, or in accordance with the practice of the California Commission, the Commission's calculation would have started with a figure of about $70,000,000. Also, and of exceeding importance on the rates fixed, the rate of return would have been based on what Mr. Justice Brandeis called the "necessary cost" of money *at the time it was invested* and not upon conditions controlling the money market at the time the rate order was made (262 U. S., pp. 304-307, 307 note).

What the Commission insisted upon, and what the Circuit Court of Appeals rejected, was the unrestricted right to rest a base calculation on book costs. The Commission also insisted upon the right to use a present low rate of return in combination with these partial past costs, instead of determining the rate of return on the basis of the historical cost of capital at the time it was invested.

It was the results of this rigid bookkeeping method of determining the rate base solely on the way individual books happened to have been kept prior to regulation, without making "pragmatic adjustments"—a method that penalizes conservative accounting of the past by eliminating present property from the rate base; that ignores permanent changes in the value of the dollar and other known facts; that destroys consistency of results in rate regulation; and that requires that utilities shall suffer from inflation and profit from deflation—that were disapproved by the Circuit Court of Appeals.

Nor is it necessary to review this case to assist the Commission and other courts in the disposition of pending cases (No. 890, Pet., pp. 15-16, notes). Few, if any, present natural gas properties are as old as Hope's. It was the pioneer operating company in the Appalachian area. All of the companies referred to in the Commission's petition are in the west and the southwest where the natural gas business has been developed largely in the last twenty years. Certainly it is true of those companies that substantially all, and in most cases all, of the investment in their properties was made after the permanent increase in price levels that occurred as a result of World War I and after the regulation of accounting by various State Commissions. With such companies the disparity between "book cost" and "original cost" and between both and present value are of minor importance compared with other matters entering into rates.

## II. Well Drilling and Other Omitted Property.

*(No. 890 Pet., pp. 19-22.)*

As previously noted, the Commission's application of its rigid bookkeeping formula resulted in the omission from the rate base of all or part of the costs of 2633 wells and other items of physical property now in service. The original cost of this omitted property was approximately $17,000,000. This omission was an automatic result of the Commission's formula due to the fact that prior to regulation Hope charges these costs to operating expense.

The Circuit Court of Appeals merely held that property now devoted to public service must be included in the rate base whether that rate base is measured by value or cost. That in so doing it followed principles long established by this Court and in this respect in conformity with the rate base views of Mr. Justice Brandeis is clear from its opinion (R. IV, 184-189).[2]

Entire omission from the rate base of the value or cost of physical property presently in service was not involved, as the Commission's petition seems to claim, either in *Federal Power Commission v. Natural Gas Pipeline Co.*, 315 U. S. 575, or *Railroad Commission of Louisiana v. Cumberland Telephone & Telegraph Company*, 212 U. S. 414. The quotation from the *Natural Gas Pipeline* case (No. 890 Pet., p. 21) refers to the subject of going concern value, where the Court refused to accord that company "the privilege of capitalizing the maintenance cost of excess

---

[2] The Circuit Court of Appeals carefully considered and disposed of the arguments made in a footnote in the Commission's petition (No. 890, p. 22) as to the effect of the 1921 rate proceedings before the West Virginia Public Service Commission (which affected only Hope's intrastate rates, then only 4% of its business) and the alleged "recoupment" of well drilling costs from earnings (R. IV, 188). We add only that the alleged earning figures stated in the footnote are grossly misleading, as we pointed out to the Circuit Court of Appeals.

plant capacity" as a measure of such value (315 U. S., pp. 590-591). There was no issue in the present case as to going concern value.

## III. The So-Called "Economic-Service-Life" Principle of Estimating Accrued Depreciation.

*(No. 890 Pet., pp. 22-23.)*

The Circuit Court of Appeals did not condemn the depreciation formulas used by the Commission but, on the contrary, said that they "are undoubtedly important matters for it to take into consideration" (R. IV, 190). But when the blind application of those formulas resulted, for example, in a depreciation of well equipment to 42.4% of its cost whereas its then salvage value, measured by Hope's experience, was 65.2% of its cost, the court properly held the results arbitrary and unreasonable (R. IV, 189). The difficulty with the Commission was that it paid no attention whatever to the salvage history of the Company's equipment or to the testimony of witnesses who had inspected the property and observed its actual condition. It applied its formulas without checking the results against known facts, a procedure which this Court has condemned in numerous cases cited in the opinion of the Circuit Court of Appeals (R. IV, 190-192).[3]

Nor is there anything in the former decisions of this Court to the contrary. Indeed in *Lindheimer v. Illinois Bell Telephone Co.*, 292 U. S. 151, which the Commission's

[3] The argument in a footnote on page 23 of the Commission's petition, No. 890, that the Commission's deduction for accrued depreciation was "some $24,000,000 less" than Hope's book depreciation reserve is factually incorrect (R. I, 86), ignores the Commission's finding that Hope's book depreciation reserve greatly overstated the actual depreciation in its present properties in terms of book cost (R. I, 39-40, 46), and ignores the evidence that Hope's book depreciation reserve is only moderately larger than the accrued depreciation found by Hope's engineers expressed in terms of present value (R. III, 24, 206).

petition claims is contrary, the Court said of estimated annual depreciation charges, page 170:

> "The necessity of checking the results is not questioned. The predictions must meet the controlling test of experience."

## IV. The Determination of Annual Allowances for Depreciation.

*(No. 890 Pet., pp. 23-25.)*

The Circuit Court of Appeals found the Commission's annual depreciation allowance inadequate for exactly the same reasons that it found the rate base inadequate, namely, (1) the allowance was based on book costs of a very old property without any reflection of present value, and (2) it omitted any consideration of property costing $17,000,000 excluded from the rate base. Additionally, the Commission failed to include any depreciation allowance whatsoever for property added by Hope after 1940 and included in the rate base.

That the holdings in these respects are in accordance with the former decisions of this Court, including those with which the Commission's petition claims they are in probable conflict, is made clear in the opinion of the Circuit Court of Appeals (R. IV, 194-196).

## V. The Commission's Power to Adjudge Retroactively the Lawfulness of Hope's Filed Rates.

*(No. 890 Pet., pp. 25-27; No. 891 Pet., pp. 16-21.)*

The Commission claims that the decision of the Circuit Court of Appeals as to the Commission's "Findings as to the Lawfulness of Past Rates" is anomalous (No. 890 Pet., pp. 25-27). The real anomaly is in the Commission's assertion of such clearly undelegated power in this one case at the instance of the City of Cleveland.[1] A similar request by the Pennsylvania Public Utility Commission in these

same proceedings was ignored by the Power Commission (R. II, 20, 22, 24). In no other case before it has the Commission asserted any such retroactive power, although if it exists there has not been an interstate natural gas rate in the country since June 21, 1938, the effective date of the Natural Gas Act, which could not have been, or which cannot now, or 20 years from now, be adjudged "unlawful" and in violation of the Act. Even the *Natural Gas Pipe Line* case (No. 890 Pet., p. 15) is still open for such action for the period June 21, 1938 to September 1, 1940, the date the rate reduction prescribed by the Commission's interim order became effective (315 U. S., p. 580). The existence of any such retroactive power, except under legislatively prescribed safeguards, would be wholly anomalous and the Circuit Court of Appeals was clearly correct in holding that "such power cannot be spelled out of the statutes on any theory of interpretation with which we are familiar" (R. IV, 200).

Cleveland claims (No. 891 Pet., pp. 18-21) that the decision of the Circuit Court of Appeals in this case is in conflict with the following decisions of this Court: *Arizona Grocery v. Atchison Railway*, 284 U. S. 370; *Atlantic Coast*

---

[1] The pending proceedings before the Public Utilities Commission of Ohio referred to by Cleveland (No. 891 Pet., p. 17) constitute an attempt by Cleveland to enforce beyond June 30, 1939 an ordinance rate which was held grossly confiscatory by that Commission in 1939 and by the Supreme Court of Ohio in 1940. *East Ohio Gas Company v. City of Cleveland*, 27 P. U. R. (N. S.) 387 (1939); *The East Ohio Gas Company v. Public Utilities Commission of Ohio, City of Cleveland v. Public Utilities Commission* (2 cases), 137 O. S. 225, 28 N. E. (2d) 599 (1940). Cleveland's claim that its consumers will be entitled to a $3,600,000 refund under the pending proceedings is merely a claim and nothing more. The rate presently collected in Cleveland under bond is the rate fixed by the Ohio Commission in 1939 and approved by the Ohio Supreme Court in 1940 in the cases cited. This rate in Cleveland and the rate of The Peoples Natural Gas Company in Pittsburgh are the lowest natural gas rates in effect in any of the 25 largest cities in the United States (Ex. 25, p. 5; Ex. 50, Table 1).

*Line Railroad Company v. Florida*, 295 U. S. 301; and *United States v. Morgan*, 307 U. S. 183. As to these cases we point out:

(1) In none was there any consideration of the lawfulness of a filed rate schedule prior to the effective date of a regulatory body's first order fixing rates for the future.

(2) The regulatory bodies involved were given by the statutes creating them power to make reparations, a power not included in the Natural Gas Act.

(3) The sole issue in the *Arizona Grocery* case was whether the Interstate Commerce Commission, after an order fixing a rate, could later order reparations of moneys collected under that rate upon a subsequent finding that the rate originally fixed was too high. The issue in the *Atlantic Coast Line* case was whether a court of equity could refuse restitution to shippers of increased rates collected by carriers under an order of the Interstate Commerce Commission which had been set aside solely for procedural defects. The issue in the *Morgan* case was whether a court of equity having control of a fund impounded with it could distribute that fund in accordance with subsequent findings of the Secretary of Agriculture, which findings however did not antedate the first order he made and on suspension of which the Court had ordered the fund impounded.

The Circuit Court of Appeals' decision on this point is supported by the recent decision of this Court in *Public Utilities Commission of Ohio v. United Fuel Gas Co.*, 317 U. S. 456. The only specific provision as to the power of the Commission to fix rates in the Natural Gas Act is that when it finds existing rates unreasonable it may fix the rate "to be thereafter" collected (No. 890 Pet., Appendix, p. 30). This is also the provision of the Ohio Public Utility Act considered in the case last cited. Construing this provision the Court said, page 464:

"If, after such hearing, the Commission finds that the rate or charge is unjust, unreasonable, or otherwise unlawful, it must 'fix and determine the just and reasonable rate, fare, charge, toll, rental or service *to be thereafter* rendered, charged, demanded, exacted or collected for the performance or rendition of the service, and order the same substituted therefor.' § 614-23 (italics added). The statute in terms thus gives the Commission power to prescribe such rates prospectively only. If, after notice and hearing, the Commission finds rates to be unlawful, it can then fix the just and reasonable rates 'to be thereafter' charged. The establishment of new rates must be preceded by a finding that the old rates are unjust and unreasonable, and the new rates are prospective as of the date they are fixed. There is no basis in the statute for concluding that the Commission's orders can be retroactive to the date when the Commission's inquiry into the rates was begun; on the contrary, the explicit language of the statute precludes such a construction."

The Commission's excursion beyond its statutory rate-making powers in the present case was properly curbed by the Circuit Court of Appeals and it is not necessary to add the authority of this Court to prevent further excursions. Indeed, the Commission has restrained itself in all cases but this.

## CONCLUSION.

For the foregoing reasons it is respectfully submitted that the petitions for a writ of certiorari should be denied.

# In the Supreme Court of the United States

**OCTOBER TERM, 1943.**

FEDERAL POWER COMMISSION, CITY OF AKRON, AND PENNSYLVANIA PUBLIC UTILITY COMMISSION, PETITIONERS,

vs.

HOPE NATURAL GAS COMPANY.

**No. 34**

CITY OF CLEVELAND,

*Petitioner,*

vs.

HOPE NATURAL GAS COMPANY,

*Respondent.*

**No. 35**

ON WRITS OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE FOURTH CIRCUIT.

## BRIEF ON BEHALF OF HOPE NATURAL GAS COMPANY.

WILLIAM B. COCKLEY,
WALTER J. MILDE,
THEODORE R. COLBORN,
1759 Union Commerce Building,
Cleveland, Ohio,

WILLIAM A. DOUGHERTY,
30 Rockefeller Plaza,
New York, New York,

*Attorneys for Hope Natural Gas Company.*

THE GATES LEGAL PUBLISHING CO., CLEVELAND, OHIO—MAIN 5647

## TABLE OF CONTENTS.

OPINIONS BELOW ..... 1

JURISDICTION ..... 2

QUESTIONS PRESENTED ..... 2

STATEMENT ..... 3

1. Hope's Business and Properties ..... 3

2. Hope's Rate History ..... 6

3. Hope's Financial History ..... 9

4. Proceedings Before the Commission ..... 13

SUMMARY OF ARGUMENT ..... 15

ARGUMENT ..... 19

I. Rate Base ..... 19

A. Summary of the Evidence and the Commission's Determinations ..... 19

1. Costs New ..... 19

2. Accrued Depreciation ..... 24

3. The Commission's Rate Base Determinations ..... 27

B. The Rate Base Calculation of the Commission Started with a Figure that is Over $17,000,000 Below the Actual Original Cost of Hope's Interstate Physical Properties and Leaseholds 30

1. Statement of This Issue ..... 30

2. Meaning of Original Cost ..... 35

(a) Meaning of original cost prior to the passage of the Natural Gas Act ..... 36

(b) The provisions of the Natural Gas Act support Hope's construction ..... 38

(c) Hope's construction of "original cost" was adopted in 1939 by the Commission in its uniform system of accounts 39

3. The Commission's Determination of a Rate Base Inconsistent with Its Determination of Operating Expenses Has Arbitrarily Understated Hope's Cost of Gas ..... 42

4. The Omission from the Commission's Rate Base of Any Consideration of Property Costing Over $17,000,000 is Not Justified on the Ground that These Costs have been Recouped by Hope from Consumers or on Other Grounds ..... 46

C. The Rate Base on Which the Commission's Order Rests Disregards Present Value and is Contrary to the Natural Gas Act and to Constitutional Requirements ..... 53

1. The Commission Ignored the Present Value of Hope's Properties ..... 53

2. The Natural Gas Act Requires a Rate Base Not Lower Than Present Value ..... 55

3. This Court Has Long Construed the Constitution as Requiring Utility Rates, However Fixed, to Allow at Least a Fair Return on Present Value and that Construction Should Not Be Reversed ..... 60

(a) The Legal Basis of the Present Value Rule Is Sound ..... 60

(b) Considerations Urged by the Commission to Justify the Application of Its Particular Rate Making Theories Regardless of Whether Its Rates Allow a Fair Return on Present Value Are Unsound ..... 66

(1) Experience ..... 67

(2) Accuracy ..... 73

(3) Stability ..... 75

(4) Investor Appeal ..... 77

D. The Commission Arbitrarily Deducted in Its Rate Base More for Accrued Depletion and Depreciation than Existed in Fact ..... 80

E. Summary and Conclusions as to Rate Base.. 90

II. Operating Expenses ..... 93

A. Annual Allowance for Depreciation and Depletion ..... 93

B. Allowance for Return on Hope's West Virginia Distribution Properties ..... 99

C. The Commission's Exclusion from 1940 Operating Expenses of $165,963 for an Experimental Deep-Test Well..... 100

D. Return from Gasoline and Butane Operations of Affiliate ..... 101

E. Federal Income Tax..... 102

III. Rate of Return..... 106

IV. Viewed in Their Entirety the Rates Fixed by the Commission Are Too Low by Any Standard..... 113

A. The Commission's Prescribed Rates Are Too Low by Any Standard..... 113

B. The Commission's Rates Are Too Low on the Basis of the Price Allowed for Hope's Produced Gas ..... 116

C. The Commission's Claims as to the Over-all Reasonableness of Its Order..... 120

D. Cleveland's Claim that No Constitutional Question is Presented..... 125

V. The Commission's Findings as to Lawfulness of Past Rates..... 126

A. The Commission Has No Authority Under the Natural Gas Act to Make These Retroactive Determinations ..... 128

B. These Retroactive Determinations Are Arbitrary and Invalid..... 138

CONCLUSION ..... 140

**APPENDICES:**

A. The Legislative History of Section 6 of the Natural Gas Act ..... 141
Summary of the History ..... 142
Statements:
A. Senate Committee Report on the Public Utility Act of 1935 ..... 146
B. House Committee Report on the Public Utility Act of 1935 ..... 148
C. Statement by Congressman Lea on the Public Utility Act of 1935 in the House of Representatives, June 28, 1935 ..... 149
D. Statement by Congressman Cole on the Public Utility Act of 1935 in the House of Representatives, June 28, 1935 ..... 150
E. Conference Report on the Public Utility Act of 1935 ..... 152
F. Hearings Before the House Committee on the Natural Gas Act ..... 154
G. Statement by Congressman Lea on H. R. 6586 (the Natural Gas Act) in the House of Representatives, April 28, 1937 ..... 158
B. Authorities Showing that Original Cost is a Matter of Actual Expenditures, Not of Bookkeeping, and Where Not Shown by Records is to be Estimated ..... 159
C. Analysis of Cases Cited in Commission's Brief (Pages 79-82) Said to "Prohibit Reaccounting and Support the Principles Employed by the Commission" in Determining "Original Cost" .. 174
D. Table—Direct Costs of Production of Gas (Exclusive of Return) and Increment of Direct Costs Year 1940 Over 1939 (Copy of Table 12 of Cleveland Reply Brief Before the Commission) ..... 183
E. Table—Indicated Rate Reduction Based on Findings of the Commission for the Year 1940 and Reported Changes in Plant, Revenues, and Expenses to December 31, 1942 (Excluding former Reserve Gas Company Operations) ..... 185

**LIST OF TABLES AND MAP:**

Hope's Annual Gas Sales*—1937-1940 ..... 4

Outline Map Showing Hope's Principal Pipe Lines, Compressor Stations and Delivery Points to Interstate Customers ..... 4

Statistics as to Hope's Properties ..... 5

Hope's Interstate Rates Which Were Reduced by the Commission ..... 7

Hope's Fixed Assets, Total Sales, Depreciation and Net Gas Income per Books—1926-1940 ..... 12

Hope's Statement of Existing Depreciation in Its Physical Properties ..... 25

Commission's Rate Base Calculation ..... 28

Undepreciated Costs and Values of Hope's Interstate Properties ..... 29

Summary of Differences Between Parties as to Original Cost ..... 33

Comparison of Hope's Actual Exploration and Development Costs with Amounts Allowed by the Commission ..... 101

Comparison of Hope's Actual Federal Income Taxes with Amounts Allowed by the Commission ..... 104

Investors' Appraisal of Capital Risk in Various Divisions of the Utility Business ..... Footnote, 107

Commission's Total Allowance for Annual Return, Depreciation and Depletion ..... 113

Rate Bases for Hope on California Prudent Investment Method ..... 114

Commission's Staff's Computation of Hope's Net Operating Income from Interstate Business—1937-1940 116

Commission's Determination of Increase in Revenue and Expenses for Interstate Business—1940 Over 1939 ..... 119

Net Operating Income under Commission's Rates—1937-1939 ..... 123

---

* Sales shown on this Table exclude exchange gas included in Hope's sales per books in Table on page 12 (See Ex. 37, 41).

# In the Supreme Court of the United States

**OCTOBER TERM, 1943.**

FEDERAL POWER COMMISSION, CITY OF AKRON, AND PENNSYLVANIA PUBLIC UTILITY COMMISSION, PETITIONERS,

vs.

HOPE NATURAL GAS COMPANY.

**No. 34**

CITY OF CLEVELAND,

*Petitioner,*

vs.

HOPE NATURAL GAS COMPANY,

*Respondent.*

**No. 35**

ON WRITS OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE FOURTH CIRCUIT.

## BRIEF ON BEHALF OF HOPE NATURAL GAS COMPANY.

Both of the above cases arise out of the same proceedings below and we therefore file one brief.

## OPINIONS BELOW.

The opinion of the Circuit Court of Appeals for the Fourth Circuit (R. IV, 169-207[1]) is officially reported in 134 F. (2d) 287. The opinion of the Federal Power Commission (R. I, 16-89) is reported in 44 P. U. R. (N. S.) 1.

[1] In the record citations, roman numerals refer to the volume and arabic numerals to the page.

## JURISDICTION.

The judgment of the Circuit Court of Appeals was entered on February 16, 1943 (R. IV, 207). The petitions for a writ of certiorari were filed on April 6, 1943, and were granted on May 17, 1943 (R. IV, 209, 210). The jurisdiction of this Court is invoked under Section 240(a) of the Judicial Code as amended by the Act of February 13, 1925 (28 U. S. C. § 347), and Section 19(b) of the Natural Gas Act (15 U. S. C. § 717r).

## QUESTIONS PRESENTED.

*(Com. Brief, 2-4; Cleve. Brief, 7-8)*[2]
